CURRICULUM AND SYLLABUS

(2020-2021 Admitted Students)

VIT[®]

Vellore Institute of Technology

(Deemed to be University under section 3 of UGC Act, 1956)

VIT[®]
Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

VISION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

Transforming life through excellence in education and research.

MISSION STATEMENT OF VELLORE INSTITUTE OF TECHNOLOGY

World class Education: Excellence in education, grounded in ethics and critical thinking, for improvement of life.

Cutting edge Research: An innovation ecosystem to extend knowledge and solve critical problems.

Impactful People: Happy, accountable, caring and effective workforce and students.

Rewarding Co-creations: Active collaboration with national & international industries & universities for productivity and economic development.

Service to Society: Service to the region and world through knowledge and compassion.

VISION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

To be a world-renowned centre of education, research and service in computing and allied domains.

MISSION STATEMENT OF THE SCHOOL OF COMPUTER SCIENCE AND ENGINEERING

- To offer computing education programs with the goal that the students become technically competent and develop lifelong learning skill.
- To undertake path-breaking research that creates new computing technologies and solutions for industry and society at large.
- To foster vibrant outreach programs for industry, research organizations, academia and society.

VIT[®]
Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

B.Tech (Computer Science and Engineering - CSE)

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. Graduates will be engineering practitioners and leaders, who would help solve industry's technological problems.
2. Graduates will be engineering professionals, innovators or entrepreneurs engaged in technology development, technology deployment, or engineering system implementation in industry.
3. Graduates will function in their profession with social awareness and responsibility.
4. Graduates will interact with their peers in other disciplines in industry and society and contribute to the economic growth of the country.
5. Graduates will be successful in pursuing higher studies in engineering or management.
6. Graduates will pursue career paths in teaching or research.

B. Tech Computer Science and Engineering

PROGRAMME OUTCOMES (POs)

PO_1 Having an ability to apply mathematics and science in engineering applications

PO_2 Having a clear understanding of the subject related concepts and of contemporary issues

PO_3 Having an ability to design a component or a product applying all the relevant standards and with realistic constraints

PO_4 Having an ability to design and conduct experiments, as well as to analyze and interpret data

PO_5 Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice

PO_6 Having problem solving ability-solving social issues and engineering problems

PO_7 Having adaptive thinking and adaptability

PO_8 Having a clear understanding of professional and ethical responsibility

PO_9 Having cross cultural competency exhibited by working in teams

PO_10 Having a good working knowledge of communicating in English

PO_11 Having a good cognitive load management [discriminate and filter the available data] skills

PO_12 Having interest in lifelong learning

VIT[®]
Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

B.Tech (Computer Science and Engineering-CSE)

PROGRAMME SPECIFIC OUTCOMES (PSOs)

1. The ability to formulate mathematical models and problem solving skills through programming techniques for addressing real life problems using appropriate data structures and algorithms.
2. The ability to design hardware and software interfaces through system programming skills based on the knowledge acquired in the system software and hardware courses.
3. The ability to provide solutions through the application of software engineering methodologies and database design principles with internet technologies for solving contemporary issues.

B. Tech Computer Science and Engineering

CSE1003	DIGITAL LOGIC AND DESIGN	I	T	P	J	C
		3	0	2	0	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
1. Introduce the concept of digital and binary systems.						
2. Analyze and Design combinational and sequential logic circuits.						
3. Reinforce theory and techniques taught in the classroom through experiments in the laboratory.						
Expected Course Outcome:						
1. Comprehend the different types of number system.						
2. Evaluate and simplify logic functions using Boolean Algebra and K-map.						
3. Design minimal combinational logic circuits.						
4. Analyze the operation of medium complexity standard combinational circuits like the encoder, decoder, multiplexer, demultiplexer.						
5. Analyze and Design the Basic Sequential Logic Circuits						
6. Outline the construction of Basic Arithmetic and Logic Circuits						
7. Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyze the results.						
Module:1	INTRODUCTION	3 hours				
Number System - Base Conversion - Binary Codes - Complements(Binary and Decimal)						
Module:2	BOOLEAN ALGEBRA	8 hours				
Boolean algebra - Properties of Boolean algebra - Boolean functions - Canonical and Standard forms - Logic gates - Universal gates – Karnaugh map - Don't care conditions - Tabulation Method						
Module:3	COMBINATIONAL CIRCUIT - I	4 hours				
Adder - Subtractor - Code Converter - Analyzing a Combinational Circuit						
Module:4	COMBINATIONAL CIRCUIT –II	6 hours				
Binary Parallel Adder- Look ahead carry - Magnitude Comparator - Decoders – Encoders - Multiplexers –Demultiplexers.						
Module:5	SEQUENTIAL CIRCUITS – I	6 hours				
Flip Flops - Sequential Circuit: Design and Analysis - Finite State Machine: Moore and Mealy model - Sequence Detector.						
Module:6	SEQUENTIAL CIRCUITS – II	7 hours				
Registers - Shift Registers - Counters - Ripple and Synchronous Counters - Modulo counters - Ring and Johnson counters						
Module:7	ARITHMETIC LOGIC UNIT	9 hours				
Bus Organization - ALU - Design of ALU - Status Register - Design of Shifter - Processor Unit - Design of specific Arithmetic Circuits Accumulator - Design of Accumulator.						
Module:8	Contemporary Issues: RECENT TRENDS	2 hours				

		Total Lecture hours:	45 hours
Text Book(s)			
1.	M. Morris Mano and Michael D.Ciletti– Digital Design: With an introduction to Verilog HDL, Pearson Education – 5th Edition- 2014. ISBN:9789332535763.		
Reference Books			
1.	Peterson, L.L. and Davie, B.S., 2007. Computer networks: a systems approach. Elsevier.		
2.	Thomas L Floyd. 2015. Digital Fundamentals. Pearson Education. ISBN: 9780132737968		
3.	Malvino, A.P. and Leach, D.P. and Goutam Saha. 2014. Digital Principles and Applications (SIE). Tata McGraw Hill. ISBN: 9789339203405.		
4.	Morris Mano, M. and Michael D.Ciletti. 2014. Digital Design: With an introduction to Verilog HDL. Pearson Education. ISBN:9789332535763		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Realization of Logic gates using discrete components, verification of truth table for logic gates, realization of basic gates using NAND and NOR gates		4.5 hours
	Implementation of Logic Circuits by verification of Boolean laws and verification of De Morgans law		3 hours
	Adder and Subtractor circuit realization by implementation of Half-Adder and Full-Adder, and by implementation of Half-Subtractor and Full-Subtractor		4.5 hours
	Combinational circuit design i. Design of Decoder and Encoder ii. Design of Multiplexer and De multiplexer iii. Design of Magnitude Comparator iv. Design of Code Converter		4.5 hours
	Sequential circuit design i. Design of Mealy and Moore circuit ii. Implementation of Shift registers iii. Design of 4-bit Counter iv. Design of Ring Counter		4.5 hours
	Implementation of different circuits to solve real world problems: A digitally controlled locker works based on a control switch and two keys which are entered by the user. Each key has a 2-bit binary representation. If the control switch is pressed, the locking system will pass the difference of two keys into the controller unit. Otherwise, the locking system will pass the sum of the two numbers to the controller unit. Design a circuit to determine the input to the controller unit.		4.5 hours
	Implementation of different circuits to solve real world problems: A bank queuing system has a capacity of 5 customers which serves on first come first served basis. A display unit is used to display the number of customers waiting in the queue. Whenever a customer leaves the queue, the count is reduced by one and the count is increased by one if a customer joins a queue. Two sensors (control signals) are used to sense customers leaving and joining the queue respectively. Design a circuit that displays the number of customers waiting in the queue in binary format using LEDs. Binary 1 is represented by LED glow and 0 otherwise.		4.5 hours
Total Laboratory Hours			30 hours
Mode of assessment: Project/Activity			
Recommended by Board of Studies		28-02-2017	
Approved by Academic Council		No. 46	Date 24-08-2017

CSE1004	NETWORK AND COMMUNICATION				L	T	P	J	C
					3	0	2	0	4
Pre-requisite	NIL				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To build an understanding among students about the fundamental concepts of computer networking, protocols, architectures, and applications. 2. To help students to acquire knowledge in design, implement and analyze performance of OSI and TCP-IP based Architectures. 3. To implement new ideas in Networking through assignments. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Interpret the different building blocks of Communication network and its architecture. 2. Contrast different types of switching networks and analyze the performance of network 3. Identify and analyze error and flow control mechanisms in data link layer 4. Design subnetting and analyze the performance of network layer 5. Construct and examine various routing protocols 6. Compare various congestion control mechanisms and identify appropriate Transport layer protocol for real time applications 7. Identify the suitable Application layer protocols for specific applications and its respective security mechanisms 									
Module:1	Networking Principles and layered architecture				6 hours				
Data Communications and Networking: A Communications Model – Data Communications - Evolution of network, Requirements , Applications, Network Topology (Line configuration, Data Flow), Protocols and Standards, Network Models (OSI, TCP/IP)									
Module:2	Circuit and Packet switching				7 hours				
Switched Communications Networks – Circuit Switching – Packet Switching – Comparison of Circuit Switching and Packet Switching – Implementing Network Software, Networking Parameters(Transmission Impairment, Data Rate and Performance)									
Module:3	Data Link Layer				10 hours				
Error Detection and Correction – Hamming Code , CRC, Checksum- Flow control mechanism – Sliding Window Protocol - GoBack - N - Selective Repeat - Multiple access Aloha - Slotted Aloha - CSMA, CSMA/CD – Multiple Access Networks (IEEE 802.3), Token Ring(IEEE 802.5) and Wireless Networks (IEEE 802.11, 802.15)									
Module:4	Network Layer				6 hours				
IPV4 Address Space – Notations – Classful Addressing – Classless Addressing – Network Address Translation – IPv6 Address Structure – IPv4 and IPv6 header format.									
Module:5	Routing Protocols				4 hours				
Routing-Link State and Distance Vector Routing Protocols- Implementation-Performance Analysis- Packet Tracer.									
Module:6	Transport Layer				7 hours				
TCP and UDP-Congestion Control-Effects of Congestion-Traffic Management-TCP Congestion Control-Congestion Avoidance Mechanisms-Queuing Mechanisms-QoS Parameters									
Module:7	Application Layer				3 hours				
Application layer-Domain Name System-Case Study : FTP-HTTP-SMTP-SNMP									
Module:8	Recent Trends in Network Security				2 hours				

	Total Lecture hours:	45 hours
Text Book(s)		
1.	Computer Networks: A Systems Approach, Larry Peterson and Bruce Davie, 5th Ed, The Morgan Kaufmann Series, Elsevier, 2011.	
2.	Computer Networking: A Top-Down Approach Featuring the Internet, J.F. Kurose and K.W.Ross, 6th Ed., Pearson Education, 2012.	
Reference Books		
1.	Data Communications and Networking, Behrouz A. Forouzan, McGraw Hill Education, 5th Ed., 2012.	
2.	TCP/IP Protocol Suite, Behrouz A. Forouzan, McGraw-Hill Education, 4 Ed., 2009.	
3.	Data and Computer Communications, William Stallings, Pearson Education, 10th Ed, 2013.	
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
List of Challenging Experiments (Indicative)		
1	Demo session of all networking hardware and Functionalities	3 Hours
2	Network configuration commands using Linux	3 Hours
3	Error detection and correction mechanisms	3 Hours
4	Flow control mechanisms	3 Hours
5	IP addressing Classless addressing	3 Hours
6	Observing Packets across the network and Performance Analysis of Routing protocols	3 Hours
7	Socket programming(TCP and UDP) Multi client chatting	3 Hours
8	Simulation of unicast routing protocols	3 Hours
9	Simulation of Transport layer Protocols and analysis of congestion control techniques in network	3 Hours
10	Develop a DNS client server to resolve the given host name or IP address	3 Hours
Total Laboratory Hours		30 hours
Mode of assessment: Project/Activity		
Recommended by Board of Studies	28-02-2017	
Approved by Academic Council	No. 46	Date 24-08-2017

CSE1007	JAVA PROGRAMMING				L	T	P	J	C
					3	0	2	0	4
Pre-requisite	NIL	Syllabus version							
		v1.0							
Course Objectives:									
<ol style="list-style-type: none"> 1. To impart the core language features of Java and its Application Programming Interfaces (API). 2. To demonstrate the use of threads, exceptions, files and collection frameworks in Java. 3. To familiarize students with GUI based application development and database connectivity. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Comprehend Java Virtual Machine architecture and Java Programming Fundamentals. 2. Design applications involving Object Oriented Programming concepts such as inheritance, association, aggregation, composition, polymorphism, abstract classes and interfaces. 3. Design and build multi-threaded Java Applications. 4. Build software using concepts such as files, collection frameworks and containers. 5. Design and implement Java Applications for real world problems involving Database Connectivity. 6. Design Graphical User Interface using JavaFX. 7. Design, Develop and Deploy dynamic web applications using Servlets and Java Server Pages. 									
Module:1	Java Fundamentals							4 hours	
Java Basics: Java Design goal - Features of Java Language - JVM - Bytecode - Java source file structure basic programming constructs Arrays one dimensional and multi-dimensional enhanced for loop String package									
Module:2	Object Oriented Programming							5 hours	
Class Fundamentals - Object Object reference array of objects constructors methods over- loading this reference static block - nested class inner class garbage collection finalize() Wrapper classes Inheritance types - use of super - Polymorphism abstract class interfaces packages and sub packages.									
Module:3	Robustness and Concurrency							6 hours	
Exception Handling - Exceptions Errors - Types of Exception - Control Flow in Exceptions - Use of try, catch, finally, throw, throws in Exception Handling - user defined exceptions - Multithreading Thread creation sharing the workload among threads synchronization inter thread communication deadlock.									
Module:4	Files, Streams and Object serialization							7 hours	
Data structures: Java I/O streams Working with files Serialization and deserialization of objects Lambda expressions, Collection framework List, Map, Set Generics Annotations									
Module:5	GUI Programming and Database Connectivity							7 hours	
GUI programming using JavaFX, exploring events, controls and JavaFX menus Accessing databases using JDBC connectivity.									

Module:6	Servlet			7 hours
Introduction to servlet - Servlet life cycle - Developing and Deploying Servlets - Exploring Deployment Descriptor (web.xml) - Handling Request and Response - Session Tracking Management.				
Module:7	Java Server Pages			7 hours
JSP Tags and Expressions - JSP Expression Language (EL) - Using Custom Tag - JSP with Java Bean.				
Module:8	Latest Trends			2 hours
Industry Expert talk				
		Total Lecture hours:	45 hours	
Text Book(s)				
1.	Herbert Schildt, The Complete Reference -Java, Tata McGraw-Hill Education, Tenth Edition, 2017.			
2.	Paul J. Deitel, Harvey Deitel ,Java SE8 for Programmers (Deitel Developer Series) 3rd Edition, 2014

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar				
List of Challenging Experiments (Indicative)				
1.	Write a program to demonstrate the use of multidimensional arrays and looping constructs.			2 hours
2.	Write a program to demonstrate the application of String handling functions.			2 hours
3.	Write a program to demonstrate the use of Inheritance.			2 hours
4.	Write a program to demonstrate the application of user-defined packages and sub-packages.			2 hours
5.	Write a program to demonstrate the use of Java Exception handling methods.			2 hours
6.	Write a program to demonstrate the use of threads in Java.			2 hours
7.	Demonstrate with a program the use of File handling methods in Java.			2 hours
8.	Demonstrate the use of Java collection frameworks in reducing application development time.			2 hours
9.	Build a GUI application using JavaFX			2 hours
10.	Write a program to register students data using JDBC with MySQL Database.			2 hours
11.	Write a program that uses Servlets to perform basic banking tasks.			2 hours
12.	Write a web application using JSP and demonstrate the use of http request and response methods.			2 hours
13.	Write a JSP program for an order management system.			2 hours
14.	Write a JSP program that using JDBC and MySQL database to store the user data.			2 hours
15.	JSP with Java Bean			2 hours
Total Laboratory Hours				30 hours
Mode of assessment: Project/Activity				
Recommended by Board of Studies		10-08-2018		
Approved by Academic Council		No. 52	Date	14-09-2018

CSE2001	COMPUTER ARCHITECTURE AND ORGANIZATION	L	T	P	J	C
		3	0	0	0	3
Pre-requisite	CSE1003 Digital Logic Design	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To acquaint students with the basic concepts of fundamental component, architecture, register organization and performance metrics of a computer. 2. To impart the knowledge of data representation in binary and understand implementation of arithmetic algorithms in a typical computer. 3. To teach students how to describe machine capabilities and design an effective data path design for instruction execution. To introduce students to syntax and semantics of machine level programming. 4. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer. And explore various alternate techniques for improving the performance of a processor. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Differentiate Von Neumann, Harvard, and CISC and RISC architectures. Analyze the performance of machines with different capabilities. 2. Illustrate binary format for numerical and characters. Validate efficient algorithm for arithmetic operations. 3. Construct machine level program for given expression on n-address machine. Analyze and calculate memory traffic for a program execution. Design an efficient data path for an instruction format for a given architecture. 4. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Demonstrate hamming code for error detection and correction. 5. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration. 6. Understand the structure and read write mechanisms for different storage systems. Illustrate and suggest appropriate use of RAID levels. Assess the performance of IO and external storage systems. 7. Classify parallel machine models. Illustrate typical 6-stage pipeline for overlapped execution. Analyze the hazards and solutions. 						
Module:1	Introduction and overview of computer architecture					3 hours
Introduction to computer systems - Overview of Organization and Architecture -Functional components of a computer -Registers and register files-Interconnection of components- Organization of the von Neumann machine and Harvard architecture-Performance of processor						
Module:2	Data Representation And Computer Arithmetic					6 hours
Fixed point representation of numbers-algorithms for arithmetic operations: multiplication (Booths, Modified Booths) - division (restoring and non-restoring) - Floating point representation with IEEE standards and algorithms for common arithmetic operations- Representation of non-numeric data (character codes).						

Module:3	Fundamentals of Computer Architecture	11 hours
Introduction to ISA (Instruction Set Architecture)-Instruction formats- Instruction types and addressing modes- Instruction execution (Phases of instruction cycle)- Assembly language programming-Subroutine call and return mechanisms-Single cycle Data path design-Introduction to multi cycle data path-Multi cycle Instruction execution.		
Module:4	Memory System Organization and Architecture	9 hours
Memory systems hierarchy-Main memory organization-Types of Main memory-memory interleaving and its characteristics and performance- Cache memories: address mapping-line size-replacement and policies- coherence- Virtual memory systems- TLB- Reliability of memory systems- error detecting and error correcting systems.		
Module:5	Interfacing and Communication	7 hours
I/O fundamentals: handshaking, buffering-I/O techniques: programmed I/O, interrupt-driven I/O, DMA- Interrupt structures: vectored and prioritized-interrupt overhead- Buses: Syn-chronous and asynchronous- Arbitration.		
Module:6	Device Subsystems	4 hours
External storage systems-organization and structure of disk drives: Electronic- magnetic and optical technologies- RAID Levels- I/O Performance		
Module:7	Performance Enhancements	4 hours
Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD)- Introduction to Pipelining- Pipelined data path-Introduction to hazards		
Module:8	Contemporary issues: Recent Trends	1 hour
Multiprocessor architecture: Overview of Shared Memory architecture, Distributed architecture.		
Total Lecture hours:		45 hours
Text Book(s)

Approved by Academic Council	No. 37	Date 16-06-2015

CSE2004	DATABASE MANAGEMENT SYSTEM	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> To understand the concept of DBMS and ER Modeling. To explain the normalization, Query optimization and relational algebra. To apply the concurrency control, recovery, security and indexing for the real time data. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> Explain the basic concept and role of DBMS in an organization. Illustrate the design principles for database design, ER model and normalization. Demonstrate the basics of query evaluation and heuristic query optimization techniques. Apply Concurrency control and recovery mechanisms for the desirable database problem. Compare the basic database storage structure and access techniques including B Tree, B+ Tress and hashing. Review the fundamental view on unstructured data and its management. Design and implement the database system with the fundamental concepts of DBMS. 						
Module:1	DATABASE SYSTEMS CONCEPTS AND ARCHITECTURE	5 hours				
History and motivation for database systems -characteristics of database approach - Actors on the scene - Workers behind the scene - Advantages of using DBMS approach– Data Models, Schemas, and Instances– Three-Schema Architecture and Data Independence– The Database System Environment– Centralized and Client/Server Architectures for DBMSs– Classification of database management systems.						
Module:2	DATA MODELING	4 hours				
Entity Relationship Model : Types of Attributes, Relationship, Structural Constraints - Relational Model, Relational model Constraints - Mapping ER model to a relational schema - Integrity constraints						
Module:3	SCHEMA REFINEMENT	6 hours				
Guidelines for Relational Schema – Functional dependency; Normalization, Boyce Codd Normal Form, Multi-valued dependency and Fourth Normal form; Join dependency and Fifth Normal form.						
Module:4	QUERY PROCESSING AND TRANSACTION PROCESSING	5 hours				
Translating SQL Queries into Relational Algebra - heuristic query optimization - Introduction to Transaction Processing - Transaction and System concepts – Desirable properties of Transactions - Characterizing schedules based on recoverability - Characterizing schedules based on serializability						
Module:5	CONCURRENCY CONTROL AND RECOVERY TECHNIQUES	4 hours				
Two-Phase Locking Techniques for Concurrency Control – Concurrency Control based on timestamp – Recovery Concepts – Recovery based on deferred update – Recovery techniques based on immediate update - Shadow Paging.						

Module:6	PHYSICAL DATABASE DESIGN	3 hours	
Indexing: Single level indexing, multi-level indexing, dynamic multilevel Indexing			
Module:7	RECENT TRENDS - NOSQL DATABASE MANAGEMENT	3 hours	
Introduction, Need of NoSQL, CAP Theorem, different NoSQL data models: Key-value stores, Column families, Document databases, Graph databases			
Total Lecture hours:			30 hours

Course code	Course Title	L	T	P	J	C
CSE2005	OPERATING SYSTEMS	3	0	2	0	4
Pre-requisite	Nil	Syllabus version				
Anti-requisite	CSII002 – Operating System Principles	v.X.X				
Course Objectives:						
<ol style="list-style-type: none"> 1. To introduce the operating system concepts, designs and provide skills required to implement the services. 2. To describe the trade-offs between conflicting objectives in large scale system design. 3. To develop the knowledge for application of the various design issues and services. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Interpret the evolution of OS functionality, structures and layers. 2. Apply various types of system calls and to find the stages of various process states. 3. Design a model scheduling algorithm to compute various scheduling criteria. 4. Apply and analyze communication between inter process and synchronization techniques. 5. Implement page replacement algorithms, memory management problems and segmentation. 6. Differentiate the file systems for applying different allocation and access techniques. 7. Representing virtualization and demonstrating the various Operating system tasks and the principle algorithms for enumerating those tasks. 						
Module:1	Introduction	3 hours			CO:1	
Introduction to OS: Functionality of OS - OS design issues - Structuring methods (monolithic, layered, modular, micro-kernel models) - Abstractions, processes, resources - Influence of security, networking, and multimedia.						
Module:2	OS Principles	4 hours			CO:2	
System calls, System/Application Call Interface – Protection: User/Kernel modes - Interrupts - Processes - Structures (Process Control Block, Ready List etc.), Process creation, management in Unix – Threads: User level, kernel level threads and thread models.						
Module:3	Scheduling	9 hours			CO:3	
Processes Scheduling - CPU Scheduling: Pre-emptive, non-pre-emptive - Multiprocessor scheduling – Deadlocks - Resource allocation and management - Deadlock handling mechanisms: prevention, avoidance, detection, recovery.						
Module:4	Concurrency	8 hours			CO:4	
Inter-process communication, Synchronization - Implementing synchronization primitives (Peterson's solution, Bakery algorithm, synchronization hardware) - Semaphores – Classical						

synchronization problems, Monitors: Solution to Dining Philosophers problem – IPC in Unix, Multiprocessors and Locking - Scalable Locks - Lock-free coordination.			
Module:5	Memory Management	7 hours	CO:5
Main memory management, Memory allocation strategies, Virtual memory: Hardware support for virtual memory (caching, TLB) – Paging - Segmentation - Demand Paging - Page Faults - Page Replacement -Thrashing - Working Set.			
Module:6	Virtualization and File System Management	6 hours	CO:7
Virtual Machines - Virtualization (Hardware/Software, Server, Service, Network - Hypervisors - Container virtualization - Cost of virtualization - File system interface (access methods, directory structures) - File system implementation (directory implementation, file allocation methods) - File system recovery - Journaling - Soft updates - Log-structured file system - Distributed file system.			
Module:7	Storage Management, Protection and Security	6 hours	CO:6
Disk structure and attachment – Disk scheduling algorithms (seek time, rotational latency based)- System threats and security – Policy vs mechanism - Access vs authentication - System protection: Access matrix – Capability based systems - OS: performance, scaling, future directions in mobile OS.			
Module:8	Recent Trends	2 hours	CO:7
		Total Lecture hours:	45 hours
Text Book(s)			
1.	Abraham Silberschatz, Peter B. Galvin, Greg Gagne-Operating System Concepts, Wiley (2018).		
Reference Books			
1.	Ramez Elmasri, A.Gil Carrick, David Levine, Operating Systems, A Spiral Approach - McGrawHill Higher Education (2010).		
2.	Remzi H. Arpaci-Dusseau, Andrea C. Arpaci-Dusseau, Operating Systems, Three Easy Pieces, Arpaci-Dusseau Books, Inc (2015).		
3.	Andrew S. Tanenbaum, Modern Operating Systems, Pearson, 4 th Edition (2016).		
4.	William Stallings, Operating Systems: Internals and Design Principles, Pearson, 9 th Edition (2018).		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Experiments			
1.	Design a boot loader - to load a particular OS say TinyOS/ KolibriOS image - code to access from BIOS to loading the OS - involves little assembly code may use QEMU/virtual machines for emulation of hardware.		3 hours

2.	Allocate/free memory to processes in whole pages, find max allocatable pages, incorporate address translation into the program.	3 hours
3.	Create an interrupt to handle a system call and continue the previously running process after servicing the interrupt.	3 hours
4.	Write a Disk driver for the SATA interface. Take care to check readiness of the controller, locked buffer cache, accept interrupts from OS during the period, interrupting the OS again once done and clearing buffers.	3 hours
5.	Demonstrate the use of locks in conjunction with the IDE driver.	3 hours
6.	Run an experiment to determine the context switch time from one process to another and one kernel thread to another. Compare the findings	3 hours
7.	Determine the latency of individual integer access times in main memory, L1 Cache and L2 Cache. Plot the results in log of memory accessed vs average latency.	3 hours
8.	Compare the overhead of a system call with a procedure call. What is the cost of a minimal system call?	3 hours
9.	Compare the task creation times. Execute a process and kernel thread, determine the time taken to create and run the threads.	3 hours
10.	Determine the file read time for sequential and random access based of varying sizes of the files. Take care not to read from cached data - used the raw device interface. Draw a graph log/log plot of size of file vs average per-block time.	3 hours
Total Laboratory Hours		30 hours

Approved by Academic Council	No. 59	Date 24-09-2020

CSE2006	MICROPROCESSOR AND INTERFACING	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	CSE1003-Digital Logic Design, CSE2001-Computer Architecture and Organization	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. Students will gain knowledge on architecture, accessing data and instruction from memory for processing. 2. Ability to do programs with instruction set and control the external devices through I/O interface 3. Generate a system model for real world problems with data acquisition, processing and decision making with aid of micro controllers and advanced processors. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Recall the basics of processor, its ways of addressing data for operation by instruction set. 2. Execute basic and advanced assembly language programs. 3. Learn the ways to interface I/O devices with processor for task sharing. 4. Recall the basics of co-processor and its ways to handle float values by its instruction set. 5. Recognize the functionality of micro controller, latest version processors and its applications. 6. Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyze the results. 						
Module:1	INTRODUCTION TO 8086 MICROPROCESSOR					6 hours
Introduction to 8086, Pin diagram, Architecture, addressing mode and Instruction set						
Module:2	INTRODUCTION TO ALP					5 hours
Tools- Assembler Directives, Editor, assembler, debugger, simulator and emulator. E.g., ALP Programs-Arithmetic Operations and Number System Conversions, Programs using Loops, If then else, for loop structures						
Module:3	Advanced ALP					2 hours
Interrupt programming using DOS BIOS function calls, File Management						
Module:4	Introduction to Peripheral Interfacing-I					5 hours
PPI 8255, Timer 8253, Interrupt controller-8259						
Module:5	Introduction to Peripheral Interfacing-II					4 hours
IC 8251 UART, Data converters (A/D and D/A Converter), seven segment display and key-board interfacing						
Module:6	Co-Processor					4 hours
Introduction to 8087, Architecture, Instruction set and ALP Programming						
Module:7	Introduction to Arduino Boards					2 hours
Introduction to Microcontroller- Quark SOC processor, programming, Arduino Boards using GPIO (LED, LCD, Keypad, Motor control and sensor), System design application and case study.						

Module:8	Contemporary issues	2 hours	
Architecture of one of the advanced processors such as Multicore, Snapdragon, ARM processor in iPad			
		Total Lecture hours:	30 hours
Text Book(s)

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Arithmetic operations 8/16 bit using different addressing modes.	2.5 hours	
2.	Finding the factorial of an 8 /16 bit number.	2.5 hours	
3.	(a) Solving nCr and nPr (b) Compute nCr and nPr using recursive procedure. Assume that n and r are non-negative integers	2.5 hours	
4.	Assembly language program to display Fibonacci series	2.5 hours	
5.	Sorting in ascending and descending order	2.5 hours	
6.	(a) Search a given number or a word in an array of given numbers. (b) Search a key element in a list of n 16-bit numbers using the Binary search algorithm.	2.5 hours	
7.	To find the smallest and biggest numbers in a given array.	2.5 hours	
8.	ALP for number system conversions.	2.5 hours	
9.	(a) String operations(String length, reverse, comparison, concatenation, palindrome)	2.5 hours	
10.	ALP for Password checking	2.5 hours	
11.	Convert a 16-bit binary value (assumed to be an unsigned integer) to BCD and display it from left to right and right to left for specified number of times	2.5 hours	
12.	ALP to interface Stepper motor using 8086/ Intel Galileo Board	2.5 hours	
Total Laboratory Hours			30 hours

Course code	Data Structures and Algorithms	L	T	P	J	C
CSE2011		3	0	2	0	4
Pre-requisite	Nil	Syllabus version				
		V. XX.XX				
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand the basic concepts of data structures and algorithms. 2. To differentiate linear and non-linear data structures and the operations upon them. 3. Ability to perform sorting and searching in a given set of data items. 4. To comprehend the necessity of time complexity in algorithms. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Understanding the fundamental analysis and time complexity for a given problem. 2. Articulate linear data structures and legal operations permitted on them. 3. Articulate non-linear data structures and legal operations permitted on them. 4. Applying a suitable algorithm for searching and sorting. 5. Understanding graph algorithms, operations, and applications. 6. Understanding the importance of hashing. 7. Applying the basic data structures to understand advanced data structure operations and applications. 8. Application of appropriate data structures to find solutions to practical problems. 						
Module:1	Introduction to Algorithms and Analysis	6 hours	CO:1			
Overview and importance of algorithms and data structures. Fundamentals of algorithm analysis, Space and time complexity of an algorithm, Types of asymptotic notations and orders of growth, Algorithm efficiency – best case, worst case, average case, Analysis of non-recursive and recursive algorithms, Asymptotic analysis for recurrence relation – Recursive Tree Method.						
Module:2	Linear Data Structures	8 hours	CO: 2,8			
Array- 1D and 2D array , Stack - Applications of stack: Expression Evaluation - Conversion of Infix to postfix and prefix expression, Tower of Hanoi. Queue - Types of Queue: Circular Queue, Double Ended Queue (deQueue), Applications – Priority Queue using Arrays - List - Singly linked lists – Doubly linked lists - Circular linked lists, Applications -Polynomial Manipulation - Josephus problem(permutation)						
Module:3	Sorting and Search Techniques	8 hours	CO:4,8			
Searching - Linear Search and binary search, Applications - Finding square root of 'n'-Longest						

Common Prefix			
Sorting – Insertion sort - Selection sort – Bubble sort – (Counting Sort) - Quick sort- Merge sort , Analysis, Applications - Finding the ‘n’ closest pair’s			
<hr/>			
Module:4	Non-linear Data Structures - Trees	6 hours	CO:5,8
Tree - Terminology, Binary Tree – Terminology and Properties, Tree Traversals, Expression Trees – Binary Search Trees – operations in BST – insertion, deletion, finding min and max, Finding the kth minimum element in a BST, Applications – Dictionary			
<hr/>			
Module:5	Non-linear Data Structures - Graphs	6 hours	CO:3,8
Graph – basic definition and Terminology – Representation of Graph – Graph Traversal: Breadth First Search (BFS), Depth First Search (DFS) - Minimum Spanning Tree: Prim's, Kruskal's- Single Source Shortest Path: Dijkstra’s Algorithm.			
<hr/>			
Module:6	Hashing	4 hours	CO:6,8
Hash functions, open hashing-separate chaining, closed hashing - linear probing, quadratic probing, double hashing, random probing, rehashing, extendible hashing. Applications – Dictionary- Telephone directory			
<hr/>			
Module:7	Heaps and Balanced Binary Search Trees	5 hours	CO:7,8
Heaps - Heap sort, Applications -Priority Queue using Heaps AVL trees – Terminology - basic operations(rotation, insertion and deletion)			
<hr/>			
Module:8	Recent Trends	2 hours	CO:8
Recent trends in algorithms and data structures			
		Total Lecture hours:	45 hours

		V. XX.XX				
Course Objectives:						
<ol style="list-style-type: none"> 1. To provide a mathematical foundation for analyzing and proving the efficiency of an algorithm. 2. To focus on the design of algorithms in various domains of computer engineering. 3. To provide familiarity with main thrusts of work in algorithms sufficient to give some context for formulating and seeking known solutions to an algorithmic problem. 						
Expected Course Outcome:						
On completion of this course, student should be able to						
<ol style="list-style-type: none"> 1. Ability to use mathematical tools to analyze and derive the running time of algorithms and prove the correctness. 2. Explain and apply the major algorithm design paradigms. 3. Explain the major graph algorithms and their analyses. 4. Explain the major String Matching algorithms and their analysis. 5. Explain the major Computational Geometry algorithms and their analysis. 6. Provide algorithmic solutions to real-world problem from various domains. 7. Explain the hardness of real world problems with respect to algorithmic efficiency and learning to cope with it. 						
Module:1	Algorithm Development	4 hours	CO: 1			
Stages of algorithm development for solving a problem: Describing the problem, Identifying a suitable technique, Design of an algorithm, Proof of Correctness of the algorithm.						
Module:2	Algorithm Design Techniques	10 hours	CO: 2			
Brute force techniques – Travelling Salesman Problem, Divide and Conquer - Finding a maximum and minimum in a given array -Matrix multiplication: Strassen’s algorithm, Greedy techniques Huffman Codes and Data Compression -Fractional Knapsack problem, Dynamic programming - O/1 Knapsack problem-Matrix chain multiplication, LCS, Travelling Salesman Problem, Backtracking- N-Queens Problem, Knights Tour on Chess Board.						
Module:3	String Matching Algorithms	5 hours	CO:1,4			
Naïve String matching Algorithms, KMP algorithm, Rabin-Karp Algorithm						

Module:4	Computational Geometry Algorithms	5 hours	CO:1,5
Line Segments – properties, intersection; Convex Hull finding algorithms- Graham’s Scan, Jarvis’s March Algorithm.			
Module:5	Graph Algorithms	6 hours	CO:1,3
All pair shortest path – Floyd-Warshall Algorithm. Network Flows - Flow Networks, Maximum Flows – Ford-Fulkerson Algorithm, Push Re-label Algorithm, Minimum Cost Flows – Cycle Cancelling Algorithm.			
Module:6	Complexity Classes	7 hours	CO:1,6
The Class P, The Class NP, Reducibility and NP-completeness – SAT (without proof), 3-SAT, Vertex Cover, Independent Set, Maximum Clique.			
Module:7	Approximation and Randomized Algorithms	6 hours	CO:7
Approximation Algorithms - The set-covering problem – Vertex cover, K-center clustering. Randomized Algorithms - The hiring problem, Finding the global Minimum Cut			
Module:8	Recent Trends	2 hours	CO:7
Total Lecture hours:		45 hours	
Text Book(s)

2.	Ravindra K. Ahuja, Thomas L. Magnanti, and James B. Orlin, “Network Flows: Theory, Algorithms, and Applications”, Pearson Education, 2014.		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
Assignment: Exploring Finite Automata and String Matching			
List of Experiments (Indicative)		Total Hours: 30	
1. Design and implement an algorithm that multiplies two 'n' digit numbers faster than $O(n^3)$.			
2. Design and implement an algorithm that will find the top and the least scores of students from an online Quiz. Note: The scores are stored in an array.			
3. Design a solution for an Airline Customer on what to leave			

behind and what to carry based on cabin baggage weight limits. The Customer has to pack as many items as the limit allows while maximizing the total worth. The data can be shared in a CSV File.

1. Assume you have an unparenthesized arithmetic expression with only + and - operators. You can change the value of expression by parenthesizing at different positions. To keep it simple, assume that parenthesis occur only before or immediately after operands and not operators. Design an algorithm that can take a maximum possible value the expression can take in after adding the parenthesis.

2. About 14 historic sites in Tamilnadu is shown in <https://www.google.com/maps/search/historic+sites+in+tamilnadu/@10.7929896,78.2883573,7z/data=!3m1!4b1>

Design a solution that identifies the shortest possible routes for a traveler to visit these sites.

3. Design a solution to see if a content $C = \text{PGGA}$ is plagiarized in Text $T = \text{SAQSPAPGPGGAS}$.

4. You can find the schematics of Delhi Art Gallery (Ground Floor) in: <https://www.archdaily.com/156154/delhi-art-gallery-re-design-vertex-design/50151feb28ba0d02f0000302-delhi-art-gallery-re-design-vertex-design-first-floor-plan>
Design a model to install fewest possible Closed Circuit Cameras covering all hallways and turns.

5. A maze has to be created and path has to be displayed which will be taken by the rat by using backtracking concept.

6. Consider $x = \text{aabab}$ and $y = \text{babb}$. Each insertion and deletion has a unit 1) cost where as a change costs 2 units. Find a minimum cost edit sequence that transforms x into y by using suitable algorithm design technique.

7. Implement N-Queens problem and analyse its time complexity using backtracking.

8. Write a program to find all the Hamiltonian cycles in a connected undirected graph $G(V,E)$ using backtracking

9. Design and implement a solution to find a subset of a given set $S = \{S_1, S_2, \dots, S_n\}$ of n positive integers whose SUM is

<p>equal to a given positive integer d. For example, if $S = \{1, 2, 5, 6, 8\}$ and $d = 9$, there are two solutions $\{1, 2, 6\}$ and $\{1, 8\}$. Display a suitable message, if the given problem instance doesn't have a solution.</p>

Course code	Theory of Computation	L	T	P	J	C
CSE2013		3	0	0	0	3
Pre-requisite		Syllabus version				
		v. XX.XX				
Course Objectives:						
The objectives of this course are to learn						
1. Types of grammars and models of automata.						
2. Limitation of computation: What can be and what cannot be computed.						
3. Establishing connections among grammars, automata and formal languages.						
Expected Course Outcome:						
After successfully completing the course the student should be able to						
1. Compare and analyze different computational models						
2. Apply rigorously formal mathematical methods to prove properties of languages, grammars and automata.						
3. Identify limitations of some computational models and possible methods of proving them.						
Module:1	Introduction to Languages and Grammars	4 hours			CO: 1	
Recall on Proof techniques in Mathematics -Overview of a Computational Models - Languages and Grammars - Alphabets - Strings - Operations on Languages, Overview on Automata						
Module:2	Finite State Automata	8 hours			CO: 2	
Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) - NFA with epsilon transitions – NFA without epsilon transition, conversion of NFA to DFA, Equivalence of NFA and DFA – minimization of DFA						
Module:3	Regular Expressions and Languages	7 hours			CO: 2	
Regular Expression - FA and Regular Expressions: FA to regular expression and regular expression to FA- - Pattern matching and regular expressions - Regular grammar and FA- Pumping lemma for regular languages - Closure properties of regular languages.						
Module:4	Context Free Grammars	7 hours			CO: 3	
Context-Free Grammar (CFG) – Derivations- Parse Trees - Ambiguity in CFG - CYK algorithm – Simplification of CFG – Elimination of Useless symbols, Unit productions, Null productions - Normal forms for CFG: CNF and GNF - Pumping Lemma for CFL - Closure Properties of CFL						
Module:5	Pushdown Automata	5 hours			CO: 2	
Definition of the Pushdown automata - Languages of a Pushdown automata – Power of Non-Deterministic Pushdown Automata and Deterministic pushdown automata						

Module:6	Turing Machine	6 hours	CO: 3
Turing Machines as acceptor and transducer - Multi head and Multi tape Turing Machines – Universal Turing Machine - The Halting problem - Turing-Church thesis			
Module:7	Recursive and Recursively Enumerable Languages	6 hours	CO: 3
Recursive and Recursively Enumerable Languages, Language that is not Recursively Enumerable (RE) – computable functions – Chomsky Hierarchy – Undecidable problems - Post's Correspondence Problem			
Module:8	Recent Trends	2 hours	CO: 3
Total Lecture hours:		45 hours

CSE3001	SOFTWARE ENGINEERING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	NIL				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To introduce the essential software engineering concepts involved 2. To impart skills in the design and implementation of efficient software systems across disciplines 3. To familiarize engineering practices and standards used in developing software products and components 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Apply the principles of the engineering processes in software development. 2. Demonstrate software project management activities such as planning, scheduling and Estimation. 3. Model the requirements for the software projects. 4. Design and Test the requirements of the software projects. 5. Implement the software development processes activities from requirements to validation and verification. 6. Apply and evaluate the standards in process and in product. 									
Module:1	OVERVIEW OF SOFTWARE ENGINEERING				5 hours				
Nature of Software, Software Engineering, Software process, project, product, Process Models Classical Evolutionary models, Overview of System Engineering									
Module:2	INTRODUCTION TO SOFTWARE PROJECT MANAGEMENT				3 hours				
Planning scope, milestones deliverables, Risk Management, Metrics Measurement									
Module:3	MODELLING REQUIREMENTS				6 hours				
Requirements Engineering process Requirement Elicitation, System Modelling - Requirements Specification and Requirement Validation									
Module:4	SOFTWARE DESIGN				4 hours				
Design concepts and principles - Abstraction - Refinement - Modularity Cohesion coupling, Architectural design, Detailed Design Transaction Transformation, Refactoring of designs, Object-oriented Design User-Interface Design									
Module:5	VALIDATION and VERIFICATION				4 hours				
Strategic Approach to Software Testing, Testing Fundamentals Test Plan, Test Design, Test Execution, Reviews, Inspection Auditing									
Module:6	SOFTWARE EVOLUTION				4 hours				
Software Maintenance, Types of Maintenance, Software Configuration Management, Overview of RE-engineering Reverse Engineering									
Module:7	QUALITY ASSURANCE				2 hours				
Product Process Metrics, Quality Standards Models ISO, TQM, Six-Sigma									
Module:8	RECENT TRENDS				2 hours				
Recent Trends in Software Design/Specialized Software Testing, Related Tools and Standards

CSE3002	INTERNET AND WEB PROGRAMMING	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	CSE2004-Database Management System	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To comprehend and analyze the basic concepts of web programming and internet protocols. 2. To describe how the client-server model of Internet programming works. 3. To demonstrates the uses of scripting languages and their limitations. 						
Expected Course Outcome:						
After successfully completing the course the student should be able to						
<ol style="list-style-type: none"> 1. Differentiate web protocols and web architecture. 2. Apply JavaScript, HTML and CSS effectively to create interactive and dynamic websites. 3. Implement client side scripting using JavaScript. 4. Develop applications using Java. 5. Implement server side script using PHP, JSP and Servlets. 6. Develop XML based web applications. 7. Develop application using recent environment like Node JS, Angular JS, JSON and AJAX. 						
Module:1	INTRODUCTION TO INTERNET	2 hours				
Internet Overview- Networks - Web Protocols — Web Organization and Addressing - Web Browsers and Web Servers -Security and Vulnerability-Web System Architecture – URL - Domain Name – Client-side and server-side scripting.						
Module:2	WEB DESIGNING	4 hours				
HTML5 – Form elements, Input types and Media elements, CSS3 - Selectors, Box Model, Backgrounds and Borders, Text Effects, Animations, Multiple Column Layout, User Interface.						
Module:3	CLIENT-SIDE PROCESSING AND SCRIPTING	7 hours				
JavaScript Introduction –Functions – Arrays – DOM, Built-in Objects, Regular Expression, Exceptions, Event handling, Validation- AJAX - JQuery.						
Module:4	SERVER SIDE PROCESSING AND SCRIPTING - PHP	5 hours				
Introduction to PHP – Operators – Conditionals – Looping – Functions – Arrays- Date and Time Functions – String functions - File Handling - File Uploading – Email Basics - Email with attachments.						
Module:5	PHP SESSION MANAGEMENT and DATABASE CONNECTIVITY	3 hours				
Sessions-Cookies-MySQL Basics – Querying single and multiple MySQL Databases with PHP – PHP Data Objects.						
Module:6	XML	4 hours				
XML Basics – XSL, XSLT, XML Schema-JSON.						

Module:7	APPLICATION DEVELOPMENT USING NODE JS	4 hours
Introduction to Node.js- Installing Node.js - Using Events, Listeners, Timers, and Callbacks in Node.js – Introduction to Mongo DB- Accessing MongoDB from Node.js.		
Module:8	Industry Expert Talk	1 hour
Total Lecture hours:		30 hours

CSE4001	PARALLEL AND DISTRIBUTED COMPUTING	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> To introduce the fundamentals of parallel and distributed computing architectures and paradigms. To understand the technologies, system architecture, and communication architecture that propelled the growth of parallel and distributed computing systems. To develop and execute basic parallel and distributed application using basic programming models and tools. 						
Expected Course Outcome:						
Students who complete this course successfully are expected to:						
<ol style="list-style-type: none"> Design and implement distributed computing systems. Asses models for distributed systems. Design and implement distributed algorithms. Experiment with mechanisms such as client/server and P2P algorithms, remote procedure calls (RPC/RMI), and consistency. Analyse the requirements for programming parallel systems and critically evaluate the strengths and weaknesses of parallel programming models. Differentiate between the major classes of parallel processing systems. Analyse the efficiency of a parallel processing system and evaluate the types of application for which parallel programming is useful. 						
Module:1	Parallelism Fundamentals	2 hours				
Motivation – Key Concepts and Challenges – Overview of Parallel computing – Flynn’s Taxonomy – Multi-Core Processors – Shared vs Distributed memory.						
Module:2	Parallel Architectures	3 hours				
Introduction to OpenMP Programming – Instruction Level Support for Parallel Programming – SIMD – Vector Processing – GPUs.						
Module:3	Parallel Algorithm and Design	5 hours				
Preliminaries – Decomposition Techniques – Characteristics of Tasks and Interactions – Mapping Techniques for Load balancing – Parallel Algorithm Models.						
Module:4	Introduction To Distributed Systems	4 hours				
Introduction – Characterization of Distributed Systems – Distributed Shared Memory – Message Passing – Programming Using the Message Passing Paradigm – Group Communication – Case Study (RPC and Java RMI).						
Module:5	Coordination	6 hours				
Time and Global States – Synchronizing Physical Clocks – Logical Time and Logical Clock – Coordination and Agreement – Distributed Mutual Exclusion – Election Algorithms – Consensus and Related Problems.						
Module:6	Distributed Transactions	6 hours				

Transaction And Concurrency Control – Nested Transactions – Locks – Optimistic Concurrency Control – Timestamp Ordering Distributed Transactions – Flat and Nested – Atomic – Two Phase Commit Protocol – Concurrency Control.			
Module:7	Distributed System Architecture and its Variants		2 hours
Distributed File System: Architecture – Processes – Communication Distributed Web-based System: Architecture – Processes – Communication. Overview of Distributed Computing Platforms.			
Module:8	Recent Trends		2 hours
		Total Lecture hours:	30 hours
Text Book(s)

EEE1001	Basic Electrical and Electronics Engineering				L	T	P	J	C
					2	0	2	0	3
Pre-requisite	NIL				Syllabus version				
					v. 1.0				
Course Objectives:									
1. To understand the various laws and theorems applied to solve electric circuits and networks									
2. To provide the students with an overview of the most important concepts in Electrical and Electronics Engineering which is the basic need for every engineer									
Expected Course Outcome:									
1. Solve basic electrical circuit problems using various laws and theorems									
2. Analyze AC power circuits and networks, its measurement and safety concerns									
3. Classify and compare various types of electrical machines									
4. Design and implement various digital circuits									
5. Analyze the characteristics of semiconductor devices and comprehend the various modulation techniques in communication engineering									
6. Design and conduct experiments to analyze and interpret data									
Module:1	DC circuits				5 hours				
Basic circuit elements and sources, Ohms law, Kirchhoff's laws, series and parallel connection of circuit elements, Node voltage analysis, Mesh current analysis, Thevenin's and Maximum power transfer theorem									
Module:2	AC circuits				6 hours				
Alternating voltages and currents, AC values, Single Phase RL, RC, RLC Series circuits, Power in AC circuits-Power Factor- Three Phase Systems – Star and Delta Connection- Three Phase Power Measurement – Electrical Safety –Fuses and Earthing, Residential wiring									
Module:3	Electrical Machines				7 hours				
Construction, Working Principle and applications of DC Machines, Transformers, Single phase and Three-phase Induction motors, Special Machines-Stepper motor, Servo Motor and BLDC motor									
Module:4	Digital Systems				5 hours				
Basic logic circuit concepts, Representation of Numerical Data in Binary Form- Combinational logic circuits, Synthesis of logic circuits									
Module:5	Semiconductor devices and Circuits				7 hours				
Conduction in Semiconductor materials, PN junction diodes, Zener diodes, BJTs, MOSFETs, Rectifiers, Feedback Amplifiers using transistors. Communication Engineering: Modulation and Demodulation - Amplitude and Frequency Modulation									
					Total Lecture hours:		30 hours		
Text Book(s)									
1.	1. John Bird, „Electrical circuit theory and technology ", Newnes publications, 4 t h Edition, 2010.

MAT1014	Discrete Mathematics and Graph Theory	L	T	P	J	C
		3	1	0	0	4
Pre-requisite	Nil	Syllabus Version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> To address the challenge of the relevance of lattice theory, coding theory and algebraic structures to computer science and engineering problems. To use number theory, in particular congruence theory to cryptography and computer science problems. To understand the concepts of graph theory and related algorithm concepts. 						
Expected Course Outcome:						
At the end of this course, students are expected to						
<ol style="list-style-type: none"> form truth tables, proving results by truth tables, finding normal forms, learn proof techniques and concepts of inference theory understand the concepts of groups and application of group codes, use Boolean algebra for minimizing Boolean expressions. learn basic concepts of graph theory, shortest path algorithms, concepts of trees and minimum spanning tree and graph colouring, chromatic number of a graph. Solve Science and Engineering problems using Graph theory. 						
Module:1	Mathematical Logic and Statement Calculus	6 hours				
Introduction-Statements and Notation-Connectives-Tautologies-Two State Devices and Statement logic -Equivalence - Implications-Normal forms - The Theory of Inference for the Statement Calculus.						
Module:2	Predicate Calculus	4 hours				
The Predicate Calculus - Inference Theory of the Predicate Calculus.						
Module:3	Algebraic Structures	5 hours				
Semigroups and Monoids - Groups – Subgroups – Lagrange’s Theorem Homomorphism – Properties-Group Codes.						
Module:4	Lattices	5 hours				
Partially Ordered Relations -Lattices as Posets – Hasse Digram – Properties of Lattices.						
Module:5	Boolean algebra	5 hours				
Boolean algebra - Boolean Functions-Representation and Minimization of Boolean Functions – Karnaugh map – McCluskey algorithm.						
Module:6	Fundamentals of Graphs	6 hours				
Basic Concepts of Graph Theory – Planar and Complete graph - Matrix representation of Graphs – Graph Isomorphism – Connectivity–Cut sets-Euler and Hamilton Paths–Shortest Path algorithms.						
Module:7	Trees, Fundamental circuits , Cut sets, Graph colouring, covering, Partitioning	12 hours				

Trees – properties of trees – distance and centres in tree –Spanning trees – Spanning tree algorithms- Tree traversals- Fundamental circuits and cut-sets. Bipartite graphs - Chromatic number – Chromatic partitioning – Chromatic polynomial - matching – Covering– Four Colour problem.			
Module:8		Contemporary Issues	
		2 hours	
Industry Expert Lecture			
		Total Lecture hours:

MAT3004	Applied Linear Algebra	L	T	P	J	C
		3	2	0	0	4
Pre-requisite	MAT2002 Applications of Differential and Difference Equations	Syllabus Version				
		v1.0				
Course Objectives						
<p>1. Understanding basic concepts of linear algebra to illustrate its power and utility through applications to computer science and Engineering.</p> <p>2. apply the concepts of vector spaces, linear transformations, matrices and inner product spaces in engineering.</p> <p>3. solve problems in cryptography, computer graphics and wavelet transforms</p>						
Expected Course Outcomes						
<p>At the end of this course the students are expected to learn</p> <p>1. the abstract concepts of matrices and system of linear equations using decomposition methods</p> <p>2. the basic notion of vector spaces and subspaces</p> <p>3. apply the concept of vector spaces using linear transforms which is used in computer graphics and inner product spaces</p> <p>4. applications of inner product spaces in cryptography</p> <p>5. Use of wavelet in image processing.</p>						
Module:1	System of Linear Equations:	6 hours				
Gaussian elimination and Gauss Jordan methods - Elementary matrices- permutation matrix - inverse matrices - System of linear equations - - LU factorizations.						
Module:2	Vector Spaces	6 hours				
The Euclidean space \mathbb{R}^n and vector space- subspace –linear combination-span-linearly dependent-independent- bases - dimensions-finite dimensional vector space.						
Module:3	Subspace Properties:	6 hours				
Row and column spaces -Rank and nullity – Bases for subspace – invertibility- Application in interpolation.						
Module:4	Linear Transformations and applications	7 hours				
Linear transformations – Basic properties-invertible linear transformation - matrices of linear transformations - vector space of linear transformations – change of bases – similarity						
Module:5	Inner Product Spaces:	6 hours				
Dot products and inner products – the lengths and angles of vectors – matrix representations of inner products- Gram-Schmidt orthogonalisation						
Module:6	Applications of Inner Product Spaces:	6 hours				
QR factorization- Projection - orthogonal projections – relations of fundamental subspaces – Least Square solutions in Computer Codes						

Module:7	Applications of Linear equations :	6 hours
An Introduction to coding - Classical Cryptosystems –Plain Text, Cipher Text, Encryption, Decryption and Introduction to Wavelets (only approx. of Wavelet from Raw data)		
Module:8	Contemporary Issues:	2 hours
Industry Expert Lecture		
Total Lecture hours:		45 hours

CSE1006	BLOCKCHAIN AND CRYPTOCURRENCY TECHNOLOGIES		L	T	P	J	C
			3	0	0	0	3
Pre-requisite	NIL	Syllabus version					
		v1.0					
Course Objectives:							
<ol style="list-style-type: none"> 1. To understand the mechanism of Blockchain and Cryptocurrency. 2. To understand the functionality of current implementation of blockchain technology. 3. To understand the required cryptographic background. 4. To explore the applications of Blockchain to cryptocurrencies and understanding limitations of current Blockchain. 5. An exposure towards recent research. 							
Expected Course Outcome:							
<ol style="list-style-type: none"> 1. To Understand and apply the fundamentals of Cryptography in Cryptocurrency 2. To gain knowledge about various operations associated with the life cycle of Blockchain and Cryptocurrency 3. To deal with the methods for verification and validation of Bitcoin transactions 4. To demonstrate the general ecosystem of several Cryptocurrency 5. To educate the principles, practices and policies associated Bitcoin business 							
Module:1	Introduction to Cryptography and Cryptocurrencies	5 hours					
Cryptographic Hash Functions, Hash Pointers and Data Structures, Digital Signatures, Public Keys as Identities, A Simple Cryptocurrency.							
Module:2	How Blockchain Achieves and How to Store and Use	7 hours					
Decentralization-Centralization vs. Decentralization-Distributed consensus, Consensus with- out identity using a blockchain, Incentives and proof of work. Simple Local Storage, Hot and Cold Storage, Splitting and Sharing Keys, Online Wallets and Exchanges, Payment Services, Transaction Fees, Currency Exchange Markets.							
Module:3	Mechanics of Bitcoin	5 hours					
Bitcoin transactions, Bitcoin Scripts, Applications of Bitcoin scripts, Bitcoin blocks, The Bit- coin network, Limitations and improvements.							
Module:4	Bitcoin Mining	5 hours					
The task of Bitcoin miners, Mining Hardware, Energy consumption and ecology, Mining pools, Mining incentives and strategies							
Module:5	Bitcoin and Anonymity	5 hours					
Anonymity Basics, How to De-anonymize Bitcoin, Mixing, Decentralized Mixing, Zerocoin and Zerocash.							
Module:6	Community, Politics, and Regulation	9 hours					
Consensus in Bitcoin, Bitcoin Core Software, Stakeholders: Who's in Charge, Roots of Bitcoin, Governments Notice on Bitcoin, Anti Money Laundering Regulation, New York's Bit License Proposal. Bitcoin as a Platform: Bitcoin as an Append only Log, Bitcoins as Smart Property, Secure Multi Party Lotteries in Bitcoin, Bitcoin as Public Randomness, Source-Prediction Markets, and Real World Data Feeds.							

Module:7	Altcoins and the Cryptocurrency Ecosystem	7 hours	
Altcoins: History and Motivation, A Few Altcoins in Detail, Relationship Between Bitcoin and Altcoins, Merge Mining-Atomic Crosschain Swaps-6 BitcoinBacked Altcoins, Side Chains, Ethereum and Smart Contracts.			
Module:8	Recent Trends and applications	2 hours	
		Total Lecture hours:	45 hours
Text Book(s)

Recommended by Board of Studies		10-08-2018	
Approved by Academic Council		No. 52	Date 14-09-2018

Course code	Course Title	L	T	P	J	C
CSE2014	Compiler Design	3	0	2	0	4
Pre-requisite	CSE2013 - Theory of Computation	Syllabus version				
Course Objectives:						
<ol style="list-style-type: none"> 1. To provide foundation for study of high performance compiler design. 2. To make students familiar with lexical analysis and parsing techniques. 3. To understand the various actions carried out in semantic analysis. 4. To make the students to get familiar how the intermediate code is generated. 5. To understand the principles of code optimization techniques. 6. To provide fundamental knowledge of various language translators. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Demonstrate the functioning of a Compiler and to develop a firm and enlightened grasp of concepts such as higher level programming, assemblers, automata theory, and formal languages, language specifications. 2. Develop language specifications using context free grammars (CFG). 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems. 4. Constructing symbol tables and generating intermediate code. 5. Obtain insights on compiler optimization. 6. Apply the skills on devising, selecting and using tools and techniques towards compiler design 						
Module:1	INTRODUCTION TO COMPILATION AND LEXICAL ANALYSIS	7 hours				
Introduction to programming language translators-Structure and Phases of a Compiler-Design Issues-Patterns-Lexemes-Tokens-Attributes-Specification of Tokens-Extended Regular Expression- Regular expression to Deterministic Finite Automata (Direct method).						
Module:2	SYNTAX ANALYSIS –TOP DOWN	5 hours				
Role of Parser- Parse Tree - Elimination of Ambiguity - Top Down Parsing - Recursive Descent Parsing - Non Recursive Descent Parsing - Predictive Parsing - LL(1) Grammars.						
Module:3	SYNTAX ANALYSIS –BOTTOM UP	7 hours				
Shift Reduce Parsers- Operator Precedence Parsing -LR Parsers,Construction of SLR Parser Tables and Parsing, CLR Parsing, LALR Parsing						
Module:4	SEMANTICS ANALYSIS	6 hours				

Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation - Syntax Directed Translation Schemes - Implementation of L attributed Syntax Directed Definition.

Module:5	INTERMEDIATE CODE GENERATION	6 hours
Variants of Syntax trees - Three Address Code- Types – Declarations - Procedures - Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements.		
Module:6	CODE OPTIMIZATION	6 hours
Loop optimizations- Principal Sources of Optimization -Introduction to Data Flow Analysis - Basic Blocks - Optimization of Basic Blocks - Peephole Optimization- The DAG Representation of Basic Blocks -Loops in Flow Graphs.		
Module:7	CODE GENERATION	6 hours
Issues in the design of a code generator- Target Machine- Next-Use Information - Register Allocation and Assignment, Runtime Organization, Activation Records.		
Module:8	RECENT TRENDS	2 hours
Total Lecture hours:		45 hours

Mode of Evaluation:CAT/ Digital Assignment/Quiz/FAT/ Project.

List of Experiments		CO: 3
1.	Write a LEX program to recognize valid arithmetic expression. Identifiers in the expression could be only integers and operators could be + and *. Count the identifiers & operators present and print them separately.	3 hours
2.	Write a LEX program to eliminate comment lines in a C program and copy the resulting program into a separate file	3 hours
3.	Write YACC program to recognize all strings for which starts with n number of „a“ followed by n number of „b“.	3 hours
4.	Write YACC program to recognize valid identifier, operators and keywords in the given text (C program) file.	3 hours
5.	Implementation of calculator using lex and yacc.	3 hours

6.	Convert the bnf rules into yacc form and write code to generate abstract syntax tree	3 hours
7.	SCHEME EXPRESSION Write a scheme expression that evaluates the polynomial Write $5 * (4.5 - 8.5) + 77$ as a scheme expression, and find its value. Define a function middle that takes five numbers as argument and returns the middle of the five	3 hours
8.	Intro to Flex and Bison Modify the scanner and parser so that terminating a statement with ";b" instead of ";" results in the output being printed in binary.	3 hours
9.	Write a recursive descent parser for the CFG language and implement it using LLVM	3 hours
10.	Write a LR parser for the CFG language and implement it in the using LLVM	3 hours
Total Laboratory Hours		30 hours
Mode of assessment: Assessment Examination, FAT Lab Examination

Approved by Academic Council	No. 59	Date 24-09-2020

CSE3006	EMBEDDED SYSTEMS DESIGN	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	CSE2006-Microprocessor and Interfacing	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To expose students to various challenges and constraints of special purpose computing systems in terms of resources and functional requirements. 2. To introduce students to various components of typical embedded systems viz., sensors and actuators, data converters, UART etc., their interfacing, programming environment for developing any smart systems and various serial communication protocols for optimal components interfacing and communication. 3. To make students understand the importance of program modeling, optimization techniques and debugging tools for product development and explore various solutions for real time scheduling issues in terms of resources and deadline. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Identify the challenges in designing an embedded system using various microcontrollers and interfaces. 2. To differentiate and outline various requirements for conventional computing systems and embedded systems. 3. Summarize the functionality of any special purpose computing system and by proposing smart solutions at prototype level to solve engineering problems. 4. To elucidate the working principle and interfacing of typical components of an embedded system. 5. Design program models, apply various optimization techniques and demonstrate the debugging tools in simulation environment. 6. To analyze the pros and cons of real time scheduling algorithms and suggest appropriate solution for various issues. 7. To evaluate the working principle of serial communication protocols and their appropriate usage. 						
Module:1	Introduction	5 hours				
Overview of Embedded Systems, Design challenges, Embedded processor technology, Hardware Design, Micro-controller architecture -8051, PIC, and ARM.						
Module:2	Conventional Computing System	4 hours				
Internal architecture of PC laptop server - higher end computing system, Requirement of Conventional Computing, Pros cons of Conventional computing.						
Module:3	Architecture of Special Purpose Computing system	6 hours				
ATM, Handheld devices, Data Compressor, Image Capturing Devices Architecture and Requirements, Challenges Constraints of special purpose computing system.						
Module:4	I/O interfacing techniques	8 hours				
Memory interfacing, A/D, D/A, timers, watch-dog timer, counters, encoder decoder, UART, Sensors and actuators interfacing.						
Module:5	Programming tools	7 hours				
Evolution of embedded programming tools, Modeling programs, Code optimization, Logic analyzers, Programming environment.						
Module:6	Real time operating system	8 hours				
Classification of Real time system, Issues challenges in RTS, Real time scheduling schemes-EDF-RMS Hybrid techniques, eCOS, POSIX, Protothreads.						
Module:7	Embedded Networking protocols	5 hours				
Inter Integrated Circuits (I2C), Controller Area Network, Embedded Ethernet Controller, RS232, Bluetooth, Zigbee, Wifi.						

Module:8	Recent Trends	2 hours	
		Total Lecture hours:	45 hours
Text Book(s)

CSE3009	INTERNET OF THINGS		L	T	P	J	C
			3	0	0	4	4
Pre-requisite	NIL		Syllabus version				
			v1.0				
Course Objectives:							
<ol style="list-style-type: none"> To apprise students with basic knowledge of IoT that paves a platform to understand physical, logical design and business models To teach a student how to analyze requirements of various communication models and protocols for cost-effective design of IoT applications on different IoT platforms. To explain the students how to code for an IoT application and deploy for real-time scenario. 							
Expected Course Outcome:							
<ol style="list-style-type: none"> Describe various layers of IoT protocol stack and describe protocol functionalities. Evaluate efficiency trade-offs among alternative communication models for an efficient IoT application design. Comprehend advanced IoT applications and technologies from the basics of IoT. Understand working principles of various sensor for different IoT platforms. Estimate the cost of hardware and software for low cost design IoT applications. Compare various application business models of different domains. Solve real-time problems and demonstrate IoT applications in various domains using prototype models. 							
Module:1	Introduction To Internet of Things		5 hours				
Definition & Characteristics of IoT - Challenges and Issues - Physical Design of IoT, Logical Design of IoT - IoT Functional Blocks, Security.							
Module:2	Components In Internet of Things		7 hours				
Control Units Communication modules Bluetooth Zigbee Wifi GPS- IOT Protocols (IPv6, 6LoWPAN, RPL, CoAP etc), MQTT, Wired Communication, Power Sources.							
Module:3	Technologies Behind IoT		7 hours				
Four pillars of IOT paradigm, - RFID, Wireless Sensor Networks, SCADA (Supervisory Control and Data Acquisition), M2M - IOT Enabling Technologies - BigData Analytics, Cloud Computing, Embedded Systems.							
Module:4	Programming The Microcontroller For IoT		8 hours				
Working principles of sensors IOT deployment for Raspberry Pi /Arduino /Equivalent platform Reading from Sensors, Communication: Connecting microcontroller with mobile devices, communication through Bluetooth, wifi and USB - Contiki OS- Cooja Simulator.							
Module:5	Resource Management in IoT		4 hours				
Clustering, Clustering for Scalability, Clustering Protocols for IOT.							
Module:6	From The Internet Of Things To The Web Of Things		6 hours				
The Future Web of Things Set up cloud environment Cloud access from sensors Data Analytics for IOT- Case studies- Open Source e-Health sensor platform Be Close Elderly monitoring Other recent projects.							

Module:7	IoT Applications			6 hours
Business models for the internet of things, Smart city, smart mobility and transport, smart buildings and infrastructure, smart health, environment monitoring and surveillance.				
Module:8	Recent Trends			2 hours
Total Lecture hours: 45 hours				
Text Book(s)

CSE3011	ROBOTICS AND ITS APPLICATIONS	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> To introduce basic concepts, parts of robots and types of robots To make the students familiar with various drive systems of robots, sensors and their applications in programming of robots To discuss the applications of robots, and implementations of robots 						
Expected Course Outcome:						
<ol style="list-style-type: none"> Explain the basic concepts of working of robot Analyze the function of sensor in robot and design the robotic arm with various tools Program the robot for a typical application and path planning using robotic vision Understand the various robot programming languages Conduct and design the experiments for various robot operations Use the advanced techniques for robot processing 						
Module:1	Introduction	3 hours				
Introduction, brief history, types, classification and usage, science and technology of robots, Artificial Intelligence in Robotics, some useful websites, textbooks and research journals						
Module:2	Elements of Robots-Joints, Links, Actuators, and Sensors	7 hours				
Representation of joints, link representation using D-H parameters, Examples of D-H parameters and link transforms, different kind of actuators, stepper-DC-servo-and brushless motors- model of a DC servo motor-types of transmissions-purpose of sensor-internal and external sensor-common sensors-encoders-tachometers-strain gauge based force torque sensor-proximity and distance measuring sensors-and vision						
Module:3	End Effectors	5 hours				
Classification of end effectors-tools as end effectors-drive system for grippers-mechanical adhesive- vacuum magnetic-grippers-hooks and scoops-gripper force analysis-and gripper design-active and passive grippers						
Module:4	Planning and Navigation	6 hours				
Introduction, path planning-overview-road map path planning-cell decomposition path planning-potential field path planning-obstacle avoidance-case studies						
Module:5	Vision system	6 hours				
Robotic vision systems-image representation-object recognition-and categorization-depth measurement- image data compression-visual inspection-software considerations						
Module:6	Robot Programming	7 hours				
Introduction to robot languages-VAL-RAPID-language-basic commands-motion instructions-pick and place operation using industrial robot manual mode-automatic mode-subroutine command based programming-move master command language-introduction-syntax-simple problems						

Module:7	Field and service robots / Industrial Robots	9 hours	
Ariel robots-collision avoidance robots for agriculture-mining-exploration-underwater-civilian-and military applications-nuclear applications-space applications-Industrial robots-artificial intelligence in robots-application of robots in material handling-continuous arc welding-spot welding-spray painting-assembly operation-cleaning-etc			
Module:8	Contemporary issues	2 hours	
Total Lecture hours: 45 hours			
Text Book(s)

CSE3013	ARTIFICIAL INTELLIGENCE	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> To impart artificial intelligence principles, techniques and its history To assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving engineering problems To develop intelligent systems by assembling solutions to concrete computational problems 						
Expected Course Outcome:						
<ol style="list-style-type: none"> Evaluate Artificial Intelligence (AI) methods and describe their foundations. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation and learning. Demonstrate knowledge of reasoning and knowledge representation for solving real world problems Analyze and illustrate how search algorithms play vital role in problem solving Illustrate the construction of learning and expert system Discuss current scope and limitations of AI and societal implications. 						
Module:1	Artificial Intelligence and its Issues	9 hours				
Definitions - Importance of AI, Evolution of AI - Applications of AI, Classification of AI systems with respect to environment, Knowledge Inferring systems and Planning, Uncertainty and towards Learning Systems.						
Module:2	Overview to Problem Solving	5 hours				
Problem solving by Search, Problem space - State space, Blind Search - Types, Performance measurement.						
Module:3	Heuristic Search	4 hours				
Types, Game playing mini-max algorithm, Alpha-Beta Pruning						
Module:4	Knowledge Representation and Reasoning	7 hours				
Logical systems Knowledge Based systems, Propositional Logic Constraints, Predicate Logic First Order Logic, Inference in First Order Logic, Ontological Representations and applications						
Module:5	Uncertainty and knowledge Reasoning	7 hours				
Overview Definition of uncertainty, Bayes Rule Inference, Belief Network, Utility Based System, Decision Network						
Module:6	Learning Systems	4 hours				
Forms of Learning Types - Supervised, Unsupervised, Reinforcement Learning, Learning Decision Trees						
Module:7	Expert Systems	7 hours				
Expert Systems - Stages in the development of an Expert System - Probability based Expert Systems - Expert System Tools - Difficulties in Developing Expert Systems - Applications of Expert Systems						
Module:8	Recent Trends	2 hours				

	Total Lecture hours:	45 hours	
Text Book(s)

CSE3016	COMPUTER GRAPHICS AND MULTIMEDIA	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				
		v. 1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To comprehend the fundamental concepts of graphics and multimedia. 2. To gain and apply the acquired knowledge pertaining to 2D and 3D concepts in graphics programming. 3. To understand the basic 3D modeling and rendering techniques. 4. To realize the importance of multimedia towards building the virtual environment and communication. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. To enumerate the functionalities of pixels and coordinate systems pertaining to graphics manipulation. 2. Design and demonstrate the 2D and 3D objects using graphics algorithms. 3. Have the ability to model and render 3D objects by comprehending the complexities of illumination in virtual scenes. 4. To realize and grasp the intricacies involved with various AR/VR devices. 5. Appraise and interpret the various multimedia communication standards, applications and basic principles. 6. To implement various graphics algorithms and devise the 2D/3D computer animation. 7. To design and develop 3D objects in the virtual space 						
Module:1	BASIC CONCEPTS & TECHNIQUES	3 hours				
Pixels-Replicating Pixels, Pixel Interpolation, Pixel Art Scaling. Bi-linear Interpolation, Vector - Scaling, Magnitude, Normalization, Dot Product, Cartesian and Polar co-ordinate system.						
Module:2	TWO DIMENSIONAL GRAPHICS PRIMITIVES	4 hours				
Bresenham's Line Algorithm, Mid-point circle Algorithm, Liang-Barsky line clipping Algorithm, Weiler and Atherton polygon clipping Algorithm, Halftoning						
Module:3	GEOMETRIC TRANSFORMATIONS & PROJECTIONS	5 hours				
Basic 2D Transforms, Basic 3D Transforms, Composite transformation matrices, Co-ordinate transform, Projections - Orthographic, Axonometric, 1 Point Perspective Projection						
Module:4	MODELING	4 hours				
Fractal models - Lindenmayer system Models, Deterministic self-similar fractals. Viewing - Drawing the Canonical View Volume, Computer Animation methods, Morphing techniques						
Module:5	RENDERING TECHNIQUES	5 hours				
Antialiasing, Texture Mapping- MipMap, Visible surface determination - Back face detection, ZBuffer method, Shading Model - Gouraud and Phong Shading.						
Module:6	AUGMENTED AND VIRTUAL REALITY	4 hours				

Understanding the Human Senses and their relationship to Output / Input Devices - Component Technologies of Head-Mounted Displays. Google Glass and Related Augmenting Displays, Sensors for Tracking Position, Orientation and Motion, Devices to Enable Interaction with Data.			
Module:7	MULTIMEDIA STANDARDS	COMMUNICATION	3 hours
JPEG, MPEG-7 standardization process of Multimedia content description, MPEG-21 Multimedia framework, ITU-T standardization process, Audio-visual systems(H.322, H.324), Video coding standards (H.261, H.26L)			
Module:8	Contemporary issues (To be handled by experts from industry)		2 hours
		Total Lecture hours:	30 hours

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Learning of Graphics Programming Environment and usage of Graphics APIs. Modelling and visualization of real-world /artificial scene using 2D graphics primitives		2 hours
2.	Implementation of Line Drawing algorithms		2 hours
3.	Implementation of Circle Drawing algorithm.		2 hours
4.	Implementation of Line clipping algorithms against the given rectangular window.		2 hours
5.	Implement the 2-D transformations functions on 2-D graphic objects. Write a sample program to demonstrate the use of the various 2-D transformation		3 hours
6.	Implement the function for the following 3-D transformation of a 3-D		3 hours

	object <ul style="list-style-type: none"> ○ Translation ○ Rotation 	
7.	Write down function to display a 3D object using <ul style="list-style-type: none"> ○ Orthographic Projection ○ Perspective Projection 	3 hours
8.	Write an application to demonstrate the use of the 3D transformations and projections.	2 hours
9.	Use a audio processing software and perform the audio editing tasks– Import audio, Select and edit the sound, Create fade-in fade-out effects, Label audio segments, Use noise remove filter, Mix audio, Change stereo to mono tracks, Export audio to different format and save.	2 hours
10.	Use a video processing Software to perform – Trim video clips, crop video, rotate video, join video, add subtitles, and edit video dimension, bit rate, frame rate, sample rate, channel on a video.	3 hours
11.	Application development to Augmented and Virtual Reality - Science and Engineering	3 hours
12.	Create a 3D animation using a 3D modeling software.	3 hours
Total Laboratory Hours		30 hours

CSE3018	CONTENT BASED IMAGE AND VIDEO RETRIEVAL	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> To understand the fundamentals of images and key image features for image and video retrieval. To provide the exposure on importance of similarity measures in content-based image and video retrieval. To design the algorithm for content-based image retrieval and classify images using machine learning algorithms. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> Understand the basic feature extraction methods used in Content based Image and Video retrieval to build the robust feature vectors for the Images. Extract the features based on various color models and apply on image and video retrieval. Apply texture and shape features for retrieval using various texture and shape models. Classify videos and image frames based on motion features. Apply similarity metrics to compute the distance between two images or videos. Use high level features using SIFT, SURF, color histograms and wavelets for image and video retrieval. Explore the computer vision tool box for object detection, tracking and processing videos. 						
Module:1	Fundamentals of Content-based image and video retrieval	3 hours				
History of CBIVR-Importance of CBIVR -Visual information retrieval system first generation VIR system 2nd generation VIR system a typical CBVIR system architecture - CBIVR techniques Query techniques: Semantic Retrieval - Relevance feedback iterative techniques machine learning techniques.						
Module:2	Image Content descriptors-Key Frame features Color	4 hours				
Color Space Color momentum color histogram color coherence vector-color correlogram Invariant color features						
Module:3	Image Content descriptors Key frame features- Texture, Shape	4 hours				
Tamura features- Wold features-Simultaneous Auto-Regressive (SAR) Model-Wavelet transform features- Shape: Moment invariants Turning angles Fourier descriptors-Spatial information						
Module:4	Motion features	3 hours				
Background foreground extraction - Camera based motion features object based motion features- object features Gabor features						
Module:5	Similarity Measures and Indexing Schemes	4 hours				
Minkowski-form distance Quadratic form distance Mahalanobis distance- Kullback-Leibler (KL) Divergence and Jeffrey-Divergence (JD)						

Module:6	Feature Extraction techniques	5 hours	
Histogram of Oriented Gradients (HOG), Speeded Up Robust Features (SURF), Local Binary Patterns (LBP), Haar wavelets, and color histograms.			
Module:7	Feature Extraction Techniques and Computer Vision Toolboxes	5 hours	
Scalar invariant feature transform Gray level co-occurrence matrix Principal component Analysis Toolboxes: Feature detection, extraction, and matching; object detection and tracking; motion estimation; and video processing.			
Module:8	Recent Trends - Case studies	2 hours	
Total Lecture hours:		30 hours

CSE3020	DATA VISUALIZATION	L	T	P	J	C
		2	0	2	4	4
Pre-requisite		Syllabus version				
		v. 1.1				
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand the various types of data, apply and evaluate the principles of data visualization. 2. Acquire skills to apply visualization techniques to a problem and its associated dataset. 3. To apply structured approach to create effective visualizations thereby building visualization dashboard to support decision making. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Identify the different data types, visualization types to bring out the insight. Relate the visualization towards the problem based on the dataset. 2. Identify the different attributes and showcasing them in plots. Identify and create various visualizations for geospatial and table data. 3. Ability to visualize categorical, quantitative and text data. Illustrate the integration of visualization tools with hadoop. 4. Ability to visualize categorical, quantitative and text data. 5. Design visualization dashboard to support the decision-making on large scale data. 6. Match the knowledge gained with the industries latest technologies. 7. Ability to create and interpret plots using R/Python. 						
Module:1	Introduction to Data Visualization	4 hours				
Overview of data visualization - Data Abstraction - Analysis: Four Levels for Validation- Task Abstraction - Analysis: Four Levels for Validation						
Module:2	Visualization Techniques	5 hours				
Scalar and point techniques Color maps Contouring Height Plots - Vector visualization techniques Vector properties Vector Glyphs Vector Color Coding Stream Objects.						
Module:3	Visual Analytics	3 hours				
Visual Variables- Networks and Trees - Map Color and Other Channels- Manipulate View						
Module:4	Visual Analytics	3 hours				
Arrange Tables Geo Spatial data Reduce Items and Attributes						
Module:5	Visualization Tools and Techniques	5 hours				
Introduction to data visualization tools- Tableau - Visualization using R						
Module:6	Diverse Types Of Visual Analysis	4 hours				
Time- Series data visualization Text data visualization Multivariate data visualization and case studies						
Module:7	Visualization Dashboard Creations	4 hours				
Dashboard creation using visualization tools for the use cases: Finance-marketing-insurance-healthcare etc.,						
Module:8	Recent Trends	2 hours				
Industry Expert talk

CSE3021	SOCIAL AND INFORMATION NETWORKS	L	T	P	J	C
		3	0	0	4	4
Pre-requisite		Syllabus version				
		v. 1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. Understand the components of social networks. 2. Model and visualize social networks. 3. Understand the role of semantic web in social networks. 4. Familiarize with the security concepts of social networks. 5. Find out various applications of social networks. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Illustrate the basic components of social networks. 2. Analyze the different measurements and metrics of social networks. 3. Apply different techniques to detect and evaluate communities in social networks. 4. Apply various types of social network models. 5. Apply semantic web format to represent social networks. 6. Develop social network applications using visualization tools. 7. Usage of the security features in social and information networks for various practical applications. . 						
Module:1	Introduction	4 hours				
Introduction to social network analysis Fundamental concepts in network analysis social network data notations for social network data Graphs and Matrices.						
Module:2	Measures & Metrics	5 hours				
Strategic network formation - network centrality measures: degree, betweenness, closeness, eigenvector - network centralization density reciprocity transitivity ego network measures for ego network - dyadic network triadic network - cliques - groups- clustering search.						
Module:3	Community networks	6 hours				
Community structure - modularity, overlapping communities - detecting communities in social networks – Discovering communities: methodology, applications - community measurement - evaluating communities – applications.						
Module:4	Models	7 hours				
Small world network - WattsStrogatz networks - Statistical Models for Social Networks Net- work evolution models: dynamical models, growing models - Nodal attribute model: expo- nential random graph models Preferential attachment - Power Law - random network model: Erdos-Renyi and Barabasi-Albert Epidemics - Hybrid models of Network Formation.						
Module:5	Semantic Web	7 hours				
Modelling and aggregating social network data developing social semantic application eval- uation of web-based social network extraction Data Mining Text Mining in social network Tools case study.						
Module:6	Visualization	8 hours				
Visualization of social networks novel visualizations and interactions for social networks ap-						

plications of social network analysis tools - sna: R Tools for Social Network Analysis - Social Networks Visualiser (SocNetV) - Pajek.			
Module:7	Security & Applications	6 hours	
Managing Trust in online social network Security and Privacy in online social network security requirement for social network in Web 2.0 - Say It with Colors: Language-Independent Gender Classification on Twitter - Friends and Circles - TUCAN: Twitter User Centric ANalyzer.			
Module:8	Recent Trends	2 hours	
Industry Expert talk

CSE3024	WEB MINING				L	T	P	J	C
					3	0	2	0	4
Pre-requisite	Nil				Syllabus version				
					v. 1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To acquire the knowledge of Web search, indexing and query processing 2. To perform web content mining for retrieving most relevant documents 3. Analyze on web structure and usage patterns 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Recognize the components of a web page and its related security issues 2. Build crawler and index the retrieved pages 3. Perform analysis on web structure and its content 4. Analyze social media data using Machine Learning techniques 5. Rene query terms for query expansion 6. Design a system to harvest information available on the web to build recommender systems 									
Module:1	Introduction				5 hours				
Introduction of WWW – Architecture of the WWW – Web Document Representation- Web Search Engine – Challenges - Web security overview and concepts, Web application security, Basic web security model -Web Hacking Basics HTTP & HTTPS URL, Web Under the Cover Overview of Java security Reading the HTML source									
Module:2	WEB CRAWLING				5 hours				
Basic Crawler Algorithm: Breadth-First/ depth-First Crawlers, - Universal Crawlers- Preferential Crawlers: Focused Crawlers – Topical Crawlers.									
Module:3	INDEXING				5 hours				
Static and Dynamic Inverted Index– Index Construction and Index Compression- Latent Semantic Indexing. Searching using an Inverted Index: Sequential Search - Pattern Matching - Similarity search.									
Module:4	WEB STRUCTURE MINING				8 hours				
Link Analysis - Social Network Analysis - Co-Citation and Bibliographic Coupling - Page Rank- Weighted Page Rank- HITS - Community Discovery - Web Graph Measurement and Modelling- Using Link Information for Web Page Classification.									
Module:5	WEB CONTENT MINING				8 hours				
Classification: Decision tree for Text Document- Naive Bayesian Text Classification - Ensemble of Classifiers. Clustering: K-means Clustering - Hierarchical Clustering – Markov Models - Probability- Based Clustering. Vector Space Model – Latent semantic Indexing – Automatic Topic Extraction from Web Documents.									
Module:6	WEB USAGE MINING				9 hours				
Web Usage Mining - Click stream Analysis - Log Files - Data Collection and Pre-Processing - Data Modelling for Web Usage Mining - The BIRCH Clustering Algorithm - Modelling web user interests using clustering- Affinity Analysis and the A Priori Algorithm – Binning –Web usage mining using Probabilistic Latent Semantic Analysis – Finding User Access Pattern via Latent Dirichlet Allocation Model.									

Module:7	QUERY PROCESSING	3 hours
Relevance Feedback and Query Expansion - Automatic Local and Global Analysis – Measuring Effectiveness and Efficiency		
Module:8	Recent Trends	2 hours
Industry Expert talk

CSE3025	LARGE SCALE DATA PROCESSING	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				
		v. 1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand the different characteristics and requirement of big data frameworks. 2. To explain the concepts of distributed file system and Map Reduce programming. 3. To apply the exposure on inverted indexing and graph data analytic. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Define the characteristics of big data and explain the data science life cycle. 2. Differentiate between conventional and contemporary distributed framework and Characterize storage and processing of large data. 3. Implement and demonstrate the use of the hadoop eco-system. 4. Compare scalable frameworks for large data. 5. Decompose a problem into map and reduce operations for implementation. 6. Design programs to analyze large scale text data. 7. Identify problems suitable for use of graph mining in large data processing. 						
Module:1	INTRODUCTION TO BIG DATA AND ANALYTICS	4 hours				
Big Data Overview Characteristics of Big Data Business Intelligence vs Data Analytics.						
Module:2	NEED OF DATA ANALYTICS	4 hours				
Data Analytics Life Cycle Data Analytics in Industries Exploring Big data Challenges in handling Big Data.						
Module:3	Big Data Tools	4 hours				
Need of Big data tools - understanding distributed systems - Overview of Hadoop comparing SQL databases and Hadoop Hadoop Eco System - Distributed File System: HDFS, Design of HDFS writing files to HDFS Reading files from HDFS.						
Module:4	Hadoop Architecture	6 hours				
Hadoop Daemons - Hadoop Cluster Architecture YARN Advantages of YARN.						
Module:5	Introduction to MapReduce	6 hours				
Developing MapReduce Program Anatomy of MapReduce Code - Simple Map Reduce Program - counting things Map Phase shuffle and sort - Reduce Phase Master slave architecture Job Processing in hadoop Map Reduce Pipelining.						
Module:6	MapReduce Programming Concepts	3 hours				
Use of Combiner - Block vs Split Size - working with Input and output format Key,Text, Sequence, NLine file format, XML file format.						
Module:7	Inverted Indexing and Graph Analytics	3 hours				
Web crawling inverted index Baseline and revised implementation - Graph Representation Parallel Breadth first search page rank issues with graph processing.

CSE3029	GAME PROGRAMMING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	Nil				Syllabus version				
					v. 1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To provide an in-depth introduction to technologies and techniques used in the game industry. 2. To recognize the processes, mechanics, issues in game design and game engine development. 3. To integrate various technologies such as multimedia, artificial intelligence and physics engine into a cohesive, interactive game application. 									
Expected Course Outcome: Upon Completion of the course, the students will be able to									
<ol style="list-style-type: none"> 1. Identify the human roles involved in the game industry and describe their responsibilities. 2. Create and produce digital components, games and documentation using a variety of Game Engines. 3. Design the graphics based games and learn to manage the graphics devices. 4. Construct the game using artificial intelligence and physics based modeling. 5. Create various types of games with different types of modes and perspectives. 6. Develop, test, and evaluate procedures of the creation, design and development of games. 7. Design unique gaming environments, levels and characters. 									
Module:1	Introduction to Game Programming				1 hours				
Overview of game programming, game industry									
Module:2	Game Engine Architecture				5 hours				
Engine Support, Resource Management, Real Time Game Architecture,									
Module:3	Graphics				6 hours				
Graphics Device Management, Tile-Based Graphics and Scrolling, GUI programming for games,									
Module:4	Artificial Intelligence and Physics				6 hours				
Artificial Intelligence in games, Physics based modeling, Path finding algorithms, Collision detection									
Module:5	Game design				8 hours				
Game design, Differing game types, modes, and perspectives, scripting, audio engineering, Sound and Music, level design, render threading									
Module:6	Project management				3 hours				
Game project management, Game design documentation, Rapid prototyping and game testing									
Module:7	Recent Trends				1 hours				
		Total Lecture hours:			30 hours

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Game development using game engines such as Unity	2 hours	
2.	Analyze a game and describe it in terms of its core elements	2 hours	
3.	Development of 2D games	2 hours	
4.	Development of 3D games	4 hours	
5.	Analyze the game mechanics of a given game and design the game mechanics of a new game	2 hours	
6.	Understand collision detection in games	2 hours	
7.	Understand physics simulation in games	2 hours	
8.	Understand UI design in games	2 hours	
9.	Write a game design document	2 hours	
10.	Explore the role of AI in games	4 hours	
11.	Scripting with Lua	2 hours	
12.	Practice programming techniques and discuss the benefits and challenges of using different languages such as Python, C++, C, Java, etc	2 hours	
13.	Students may use platforms such as Windows platform, DirectX SDK for rendering, APIs such as Lua scripting language, Box2D Physics Engine, tools such as Visual Studio IDE for software development, Tiled for map editing, RUBE for Box2D level editing, Gimp for sprite sheet creation, Audacity for sound recording and editing.	2 hours	
Total Laboratory Hours			30 hours

Course Code	Information Security Analysis and Audit	L	T	P	J	C
CSE3501	Job Role: SSC/Q0901	2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		1.0				
<p>Objective of the course</p> <ol style="list-style-type: none"> To introduce system security related incidents and insight on potential defenses, counter measures against common threat/vulnerabilities. To provide the knowledge of installation, configuration and troubleshooting of information security devices. To make students familiarize on the tools and common processes in information security audits and analysis of compromised systems. 						
<p>Expected Outcome</p> <p>After successfully completing the course the student should be able to</p> <ol style="list-style-type: none"> Contribute to managing information security Co-ordinate responses to information security incidents Contribute to information security audits Support teams to prepare for and undergo information security audits Maintain a healthy, safe and secure working environment Provide data/information in standard formats Develop knowledge, skills and competence in information security 						
1	Information Security Fundamentals	7 hours				
Definitions & challenges of security, Attacks & services, Security policies, Security Controls, Access control structures, Cryptography, Deception, Ethical Hacking, Firewalls, Identify and Access Management (IdAM).						
2	System Security	6 hours				
System Vulnerabilities, Network Security Systems, System Security, System Security Tools, Web Security, Application Security, Intrusion Detection Systems,						
3	Information Security Management	3 hours				
Monitor systems and apply controls, security assessment using automated tools, backups of security devices, Performance Analysis, Root cause analysis and Resolution, Information Security Policies, Procedures, Standards and Guidelines						
4	Incident Management	5 hours				
Security requirements, Risk Management, Risk Assessment, Security incident management, third party security management, Incident Components, Roles.						
5	Incident Response	4 hours				
Incident Response Lifecycle, Record, classify and prioritize information security incidents using standard templates and tools, Responses to information security incidents, Vulnerability Assessment, Incident Analysis						

6	Conducting Security Audits	3 hours
Common issues in audit tasks and how to deal with these, Different systems and structures that may need information security audits and how they operate, including: servers and storage devices, infrastructure and networks , application hosting and content management, communication routes such as messaging, Features, configuration and specifications of information security systems and devices and associated processes and architecture, Common audit techniques, Record and report audit tasks, Methods and techniques for testing compliance.		
7	Information Security Audit Preparation	2 hours
Establish the nature and scope of information security audits, Roles and responsibilities, Identify the procedures/guidelines/checklists, Identify the requirements of information security, audits and prepare for audits in advance, Liaise with appropriate people to gather data/information required for information security audits.		
8	Self and Work Management	2 hours
Establish and agree work requirements with appropriate people, Keep the immediate work area clean and tidy, utilize time effectively, Use resources correctly and efficiently, Treat confidential information correctly, Work in line with organization’s policies and procedures, Work within the limits of their job role.

Identify And Access Management (IdAM), Networks (Wired And Wireless) Devices, Endpoints/Edge Devices, Storage Devices, Servers, Infrastructure Devices (e.g. Routers, Firewall Services) , Computer Assets, Servers And Storage Networks, Content management, IDS/IPS						
2	Security Device Management	6 hours				
Different types of information security devices and their functions, Technical and configuration specifications, architecture concepts and design patterns and how these contribute to the security of design and devices.						
3	Device Configuration	5 hours				
Common issues in installing or configuring information security devices, Methods to resolve these issues, Methods of testing installed/configured information security devices,						
4	Information Security Audit Preparation	5 hours				
Establish the nature and scope of information security audits, Roles and responsibilities, Identify the procedures/guidelines/checklists, Identify the requirements of information security, audits and prepare for audits in advance, Liaise with appropriate people to gather data/information required for information security audits. Security Audit Review - Organize data/information required for information security audits using standard templates and tools, Audit tasks, Reviews, Comply with the organization's policies, standards, procedures, guidelines and checklists, Disaster Recovery Plan						

5	Team Work and Communication	2 hours
Communicate with colleagues clearly, concisely and accurately , Work with colleagues to integrate their work effectively, Pass on essential information to colleagues in line with organizational requirements, Identify any problems they have working with colleagues and take the initiative to solve these problems, Follow the organization’s policies and procedures for working with colleagues		
6	Managing Health and Safety	2 hours
Comply with organization’s current health, safety and security policies and procedures, Report any identified breaches in health, safety, and Security policies and procedures, Identify, report and correct any hazards, Organization’s emergency procedures, Identify and recommend opportunities for improving health, safety, and security.		
7	Data and Information Management	3 hours
Fetching the data/information from reliable sources, Checking that the data/information is accurate, complete and up-to-date, Rule-based analysis of the data/information, Insert the data/information into the agreed formats, Reporting unresolved anomalies in the data/information.		
8	Learning and Self Development	2 hours
Identify accurately the knowledge and skills needed, Current level of knowledge, skills and competence and any learning and development needs, Plan of learning and development activities to address learning needs, Feedback from appropriate people, Review of knowledge, skills and competence regularly and appropriate action taken

Course Code	IoT Fundamentals				L	T	P	J	C
ECE3501	Job Role: SSC/Q8210				2	0	2	4	4
Pre-requisite	Computer Networks				Syllabus version				
					v.1.0				
Course Objectives:									
<ol style="list-style-type: none"> To impart knowledge on the infrastructure, sensor technologies and networking technologies of IoT. To analyse, design and develop IoT solutions. To explore the entrepreneurial aspect of the Internet of Things To apply the concept of Internet of Things in the real world scenarios 									
Expected Course Outcome:									
After successfully completing the course the student should be able to									
<ol style="list-style-type: none"> Identify the main component of IoT Program the controller and sensor as part of IoT Assess different Internet of Things technologies and their applications 									
Module:1									
Introduction:				2 hour					
IT-ITeS/BPM Industry – An Introduction, the relevance of the IT-ITeS sector, Future Skills – An Introduction , General overview of the Future Skills sub-sector									
Module:2									
Internet of Things - An Introduction:				3 hours					
Evolution of IoT and the trends, Impact of IoT on businesses and society, Existing IoT use cases and applications across industries.									
Module:3									
IoT Security and Privacy:				6 hours					
Security and privacy risks, analyze security risks, Technologies and methods that mitigate security, Privacy standards and regulations, Social and privacy impacts									
Module:4									
IoT Solutions				6 hours					
IoT use case development, Need and Goals for IoT solution, Adoption of IoT solutions, Planning for IoT Solution: Evaluate costs, competition, technology challenges and internal resource considerations, Need for stakeholder buy-in									
Module:5									
Prototyping the Pilot execution:				5 hours					
Prototype developing Stages, deploy real-time UI/UX visualizations, Methods and metrics to analyze and convey business outcomes, feedback and data obtained from execution.									
Module:6									
Scalability of IoT Solutions:				5 hours					
Roadmap for developing complete IoT solutions, Strategies for implementation, key Milestone, Scalability of IoT Solutions, Methods, platforms and tools. Web and Mobile Interfaces									
Module:7									
Build and Maintain Relationships at the Workplace, Team Empowerment				3 hours					
Total Lecture hours:									
				30 hours

Expected Course Outcome:						
After successfully completing the course the student should be able to						
<ol style="list-style-type: none"> Identify the main component of IoT Program the controller and sensor as part of IoT Assess different Internet of Things technologies and their applications 						
Module:1	IoT Solution Models:	3 hour				
Models applied in IoT solutions, Semantic models for data models, Application of semantic models, information models, information models to structure data, relationships between data categories.						
Module:2	Data Models :	3 hours				
Tags to organize data, tag data to pre-process large datasets, predictive models for forecasting, Application of predictive models.						
Module:3	Simulation Scenarios:	4 hours				
Models to simulate real-world scenarios, Application of the models, stages of data lifecycle, reuse existing IoT solutions, reusability plan.						
Module:4	Use Case Development	4 hours				
Approaches to gather business requirements, defining problem statements, business requirements for use case development, Assets for development of IoT solutions.						
Module:5	Value engineering and Analysis:	4 hours				
Principles and phases of Value Engineering and Analysis, Frameworks for Value Engineering in IoT solutions, cost-function analysis of IoT solution components, action plans to incorporate Value Engineering, Data modelling requirements, Development models: Waterfall, Agile, Spiral, V models, monetization models for IoT use cases - 'Outcomes As A Service' model.						
Module:6	Data Analytics for IoT Solutions:	6 hours				
Data generation, Data gathering, Data Pre-processing, data analyzation, application of analytics, vertical-specific algorithms, Exploratory Data Analysis.						

Module:7	Deployment of Analytics Solutions	6 hours
Anomaly Detection and Data Clustering, Predictive Analytics and Streaming Analytics, cloud/edge methods, integrating analytics models, performance of analytical models, Templates for data insights, deriving insights.

Course Code	Foundations of Data Analytics	L	T	P	J	C
CSE3505		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		v.1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To establish clearly the objectives and scope of the predictive analysis 2. Use R programming language to identify suitable data sources to agree the methodological approach 3. Validate and review data accurately and identify anomalies 4. To appreciate the current trends in data analysis procedure 5. Carry out rule-based analysis of the data in line with the analysis plan 6. Apply statistical models to perform Regression Analysis, Clustering and Classification 7. Present the results and inferences from your analysis using R tool 8. To improve document management and team work 						
Expected Course Outcome:						
Students will be able to:						
<ol style="list-style-type: none"> 1. Understand R with Business Intelligence, Business Analytics, Data and Information 2. Contextually integrate and correlate information automatically to gain faster insights 3. Implement statistical analysis techniques for solving practical problems. 4. Graphically interpret data and Find a meaningful pattern in data 5. Perform statistical analysis on variety of data. 						
Module:1	Introduction to Analytics					4 hours
Analytics life cycle - Business analytics - lending analytics- recommendation analytics- Healthcare Analytics- financial analytics - sports analytics						
Module:2	R programming Basics					5 hours
Introduction to R, R Studio (GUI): R Windows Environment, introduction to various data types, Numeric, Character, date, data frame, array, matrix etc.,						
Module:3	Working with datasets and files:					6 hours
Reading Datasets, Working with different file types .txt,.csv , R studio, Files, Datasets, Extracting Datasets, Preparing datasets. Data Cleaning, Data imputation, Data conversion Analysis						
Module:4	Introduction to statistical learning and R-Programming					6 hours
Basic statistics: mean, median, standard deviation, variance, correlation, covariance - Outliers, Combining Datasets in R, Functions and loops. Summary Statistics - Summarizing data with R - Correlation and Regression						
Module:5	Document Creation and Knowledge Sharing:					3 hours
Access existing documents, language standards, templates and documentation tools from their organization's knowledge base. Confirm the content and structure of the documents with appropriate people, Create documents using standard templates and agreed language standards. Review documents with appropriate people and incorporate their inputs						
Module:6	Self and work Management:					3 hours
Establish and agree their work requirements with appropriate people - Keep their immediate work area clean and tidy - utilize their time effectively - Use resources correctly and efficiently - Treat confidential information correctly - Work in line with organization's policies and						

procedures - Work within the limits of their job role		
Module:7	Team Work and Communication	3 hours
Communicate with colleagues clearly, concisely and accurately - Work with colleagues to integrate their work effectively with them - Pass on essential information to colleagues in line with organizational requirements - Work in ways that show respect for colleagues - carry out commitments they have made to colleagues - Let colleagues know in good time if they cannot carry out their commitments, explaining the reasons - Identify any problems they have working with colleagues and take the initiative to solve these problems

5.	https://www.sscnasscom.com/qualification-pack/SSC/Q2101/	
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
List of Challenging Experiments (Indicative)		
1.	Understanding of R System and installation and configuration of R-Environment and R-Studio, Understanding R Packages, their installation and management	3 hours
2.	Understanding of nuts and bolts of R: a. R program Structure b. R Data Type, Command Syntax and Control Structures c. File Operations in R	3 hours
3.	Dataframes and lists	3 hours
4.	Excel and R integration with R connector.	3 hours
5.	Preparing Data in R a. Data Cleaning b. Data imputation c. Data conversion	3 hours
6.	Manipulating Matrices in R	3 hours
7.	Outliers detection using R	3 hours
8.	Correlation and N-Fold cross validation in R	3 hours
9.	Debugging and Program Efficiency in R	3 hours
10.	Visualizing data using R with different type of graphs and charts	3 hours
Total Laboratory Hours		30 hours

Mode of assessment: Assessment Examination, FAT Lab Examination			
Recommended by Board of Studies	08-02-2020		
Approved by Academic Council	No. 58	Date	26-02-2020

Course Code	Essentials of Data Analytics	L	T	P	J	C
CSE3506		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		v.1.0				
Course Objectives:						
<ul style="list-style-type: none"> 9. To understand the concepts of analytics using various machine learning models. 10. To appreciate supervised and unsupervised learning for predictive analysis 11. To understand data analytics as the next wave for businesses looking for competitive advantage 12. Carry out rule-based analysis of the data in line with the analysis plan 13. Validate the results of their analysis according to statistical guidelines 14. Validate and review data accurately and identify anomalies 15. To learn aspects of computational learning theory 16. Apply statistical models to perform Regression Analysis, Clustering and Classification 						
Expected Course Outcome:						
<ul style="list-style-type: none"> 6. Identify and apply the appropriate supervised learning techniques to solve real world problems with labelled data. 7. Choose and implement typical unsupervised algorithms for different types of applications with unlabelled data. 8. Implement statistical analysis techniques for solving practical problems. 9. Understand different techniques to optimize the learning algorithms. 10. Aware of health and safety policies followed in organization, data and information management and knowledge & skill development. 						
Module:1	Regression Analysis					6 hours
Linear regression: simple linear regression - Regression Modelling - Correlation, ANOVA, Forecasting, Autocorrelation						
Module:2	Classification					6 hours
Logistic Regression, Decision Trees, Naïve Bayes-conditional probability - Random Forest - SVM Classifier						
Module:3	Clustering					4 hours
K-means, K-medoids, Hierarchical clustering						
Module:4	Optimization					3 hours
Gradient descent - Variants of gradient descent - Momentum - Adagrad - RMSprop - Adam - AMSGrad						
Module:5	Managing Health and Safety					4 hours
Comply with organization's current health, safety and security policies and procedures - Report any identified breaches in health, safety, and security policies and procedures to the designated person - Identify and correct any hazards that they can deal with safely, competently and within the limits of their authority - Report any hazards that they are not competent to deal with to the relevant person in line with organizational procedures and warn other people who may be affected.						
Module:6	Data and Information Management					4 hours
Establish and agree with appropriate people the data/information they need to provide, the formats in which they need to provide it, and when they need to provide it - Obtain the						

data/information from reliable sources - Check that the data/information is accurate, complete and up-to-date		
Module:7	Learning and Self Development	3 hours
Obtain advice and guidance from appropriate people to develop their knowledge, skills and competence - Identify accurately the knowledge and skills they need for their job role - Identify accurately their current level of knowledge, skills and competence and any learning and development needs - Agree with appropriate people a plan of learning and development activities to address their learning needs

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
List of Challenging Experiments (Indicative)		
1.	Linear regression analysis	3 hours
2.	Forecasting - weather dataset using R	3 hours
3.	Gradient descend implementation using R	3 hours
4.	Text Analytics – Sentiment Analysis using R, Word cloud analysis using R	3 hours
5.	Time Series Components(Trend, Seasonality, Cyclicity and Level)	3 hours
6.	Banking Sector: Understand customer spend & repayment behavior, along with evaluating areas of bankruptcy, fraud, and collections. Also, respond to customer requests for help with proactive offers and service.	3 hours

7.	Retail Case Study: A retail store requires analyzing the day-to-day transactions and keeping a track of its customers spread across various locations and their purchases/returns across various categories. The objective of the case study is to understand customer behavior in-terms of purchase and returns through various Data Manipulation steps in R.	3 hours
8	Movie Recommendation System: To understand the functioning of how a recommendation system works. Develop an Item Based Collaborative Filter using Netflix dataset	3 hours
9.	Case study on Stock Market Analysis and applications. Stock data can be obtained from Yahoo! Finance, Google Finance. A team of students can apply statistical modeling on the stock data to uncover hidden patterns. R provides tools for moving averages, auto regression and time-series analysis which forms the crux of financial applications.	3 hours
10.	Detect credit card fraudulent transactions - The dataset can be obtained from Kaggle. The team will use a variety of machine learning algorithms that will be able to discern fraudulent from non-fraudulent one.	3 hours

CSE4003	CYBER SECURITY	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	Nil	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To learn the concepts of number theory, cryptographic techniques. 2. To understand integrity and authentication process. 3. To familiarize various cyber threats, attacks, vulnerabilities, defensive mechanisms, security policies and practices. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Know the fundamental mathematical concepts related to security. 2. Implement the cryptographic techniques to real time applications. 3. Comprehend the authenticated process and integrity, and its implementation 4. Know fundamentals of cybercrimes and the cyber offenses. 5. Realize the cyber threats, attacks, vulnerabilities and its defensive mechanism. 6. Design suitable security policies for the given requirements. 7. Exploring the industry practices and tools to be on par with the recent trends 						
Module:1	Introduction to Number Theory	6 hours				
Finite Fields and Number Theory: Modular arithmetic, Euclidian Algorithm, Primality Testing: Fermats and Eulers theorem, Chinese Remainder theorem, Discrete Logarithms						
Module:2	Cryptographic Techniques	9 hours				
Symmetric key cryptographic techniques: Introduction to Stream cipher, Block cipher: DES, AES, IDEA Asymmetric key cryptographic techniques: principles, RSA, ElGamal, Elliptic Curve cryptography, Key distribution and Key exchange protocols.						
Module:3	Integrity and Authentication	5 hours				
Hash functions, Secure Hash Algorithm (SHA) Message Authentication, Message Authentication Code (MAC), Digital Signature Algorithm : RSA ElGamal based						
Module:4	Cybercrimes and cyber offenses	7 hours				
Classification of cybercrimes, planning of attacks, social engineering: Human based, Computer based: Cyberstalking, Cybercafe and Cybercrimes						
Module:5	Cyber Threats, Attacks and Prevention	9 hours				
Phishing, Password cracking, Keyloggers and Spywares, DoS and DDoS attacks, SQL Injection Identity Theft (ID) : Types of identity theft, Techniques of ID theft						
Module:6	Cybersecurity Policies and Practices	7 hours				
What security policies are: determining the policy needs, writing security policies, Internet and email security policies, Compliance and Enforcement of policies, Review						
Module:7	Recent Trends	2 hours

CSE4004	DIGITAL FORENSICS		L	T	P	J	C	
			3	0	2	0	4	
Pre-requisite	Nil		Syllabus version					
							v1.0	
Course Objectives:								
<ol style="list-style-type: none"> 1. To learn about examination, preventing and fighting digital crimes 2. To model about data acquisition and storing digital evidence 3. To explore operating system file structure, file system and mobile device forensics and its acquisition procedures 								
Expected Course Outcome:								
<ol style="list-style-type: none"> 1. Infer the role of a Computer forensics profession for investigation. 2. Summarize the requirements for use of data acquisition. 3. Identify the need of Process crime and Incident scenes for digital evidence. 4. Choose suitable data Recover techniques in windows environment. 5. Analyze various validation techniques of forensics data. 6. Experiment with current computer forensics hardware and software tools for E-mail investigation and mobile device forensics. 7. Prioritize the challenges associated with real time forensics applications/tools. 								
Module:1	Computer Forensics and Investigation							6 hours
Understanding computer forensics, Preparing for Computer Investigations, Corporate High Tech Investigation								
Module:2	Data Acquisition and Recovery							6 hours
Storage formats, Using acquisition tools, Data Recovery: RAID Data acquisition.								
Module:3	Processing Crime and Incident Scene							8 hours
Identifying and collecting evidence, Preparation for search, Seizing and Storing Digital evidence								
Module:4	Computer Forensics tools (Encase) and Windows Operating System							8 hours
Understanding file structure and file system, NTFS disks, Disk Encryption and Registry Manipulation. Computer Forensics software and hardware tools								
Module:5	Computer Forensics Analysis and Validation							7 hours
Data collection and analysis, validation of forensics data, Addressing – data hiding technique								
Module:6	Email Investigation and Mobile device Forensics							6 hours
Investigation e-mail crimes and Violations, Using specialized E-mail forensics tools. Understanding mobile device forensics and Acquisition procedures.								
Module:7	Role of Digital Forensics in Real time applications							2 hours
SANS SIFT Investigative tool, PRO Discover Basic, Volatility, Sleuth Kit, CAINE investigative environment								
Module:8	Industry Trends							2 hours

CSE4011	VIRTUALIZATION				L	T	P	J	C
					3	0	0	4	4
Pre-requisite	Nil				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To identify and select suitable hypervisor for a cloud environment. 2. To acquire the knowledge of various virtualization techniques and tools. 3. To understand the process of data center automation and secure virtualized environment. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Illustrate the process of virtualization. 2. Create and configure the hypervisors in cloud. 3. Apply the virtualization concepts in server and manage the storage capacity. 4. Analyze, identify and select suitable type of virtualization. 5. Use the management tools for managing the virtualized cloud infrastructure. 6. Apply suitable automation and security methods on data centre 									
Module:1	INTRODUCTION				4 hours				
Virtualization definition – virtual machine basics – benefits – need for virtualization – limitations – traditional vs. contemporary virtualization process – virtual machines – taxonomy – challenges.									
Module:2	HYPERVISORS				7 hours				
Introduction to Hypervisors – Type 1 Hypervisors – Type 2 Hypervisors – comparing hypervisors – virtualization considerations for cloud providers.									
Module:3	HARDWARE VIRTUALIZATION				7 hours				
Full virtualization - para virtualization - server virtualization - OS level virtualization - emulation – binary translation techniques – managing storage for virtual machines.									
Module:4	TYPES OF VIRTUALIZATION				8 hours				
Application virtualization - desktop virtualization - network virtualization - storage virtualization - comparing virtualization approaches.									
Module:5	VIRTUALIZATION MANAGEMENT				6 hours				
Management life cycle - managing heterogeneous virtualization environment – customized and modifying virtual machines – virtual machine monitoring – management tools.									
Module:6	AUTOMATION				6 hours				
Benefits of data center automation – virtualization for autonomic service provisioning – software defined data center - backup - disaster recovery.									
Module:7	SECURITY				5 hours				
Mapping Design (Models) to Code – Testing - Usability – Deployment – Configuration Management – Maintenance									
Module:8	RECENT TRENDS				2 hours				

	Total Lecture hours:	45 hours

		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> To provide knowledge on high performance computing concepts to the students. To comprehend the students how to analyze the parallel programming through OpenMP, MPI, CUDA. To teach the student how to apply job management techniques and evaluate the performance. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> To knowledge the overview and analyze the performance metrics of high performance computing. To comprehend the various High Performance Computing Paradigms and Job Management Systems. To design and develop various applications with OpenMP, MPI and CUDA. To analyze the benchmarks of high performance computing. To demonstrate the various emerging trends of high performance computing. To apply high performance computing concepts in problem solving. 						
Module:1	Introduction to High Performance Computing (HPC)					4 hours
Overview of Parallel Computers and high performance computing (HPC), History of HPC, Numerical and HPC libraries, Performance metrics.						
Module:2	HPC Paradigms					6 hours
Supercomputing, Cluster Computing, Grid Computing, Cloud Computing, Many core Computing, Petascale Systems						
Module:3	Parallel Programming - I					7 hours
Introduction to OpenMP, Parallel constructs, Runtime Library routines, Work-sharing constructs, Scheduling clauses, Data environment clauses, atomic, master Nowait Clause, Barrier Construct, overview of MPI, MPI Constructs, OpenMP vs MPI.						
Module:4	Job Management Systems					8 hours
Batch scheduling: Condor, Slurm, SGE, PBS, Light weight Task Scheduling: Falcon, Sparrow						
Module:5	Parallel Programming - II					7 hours
Introduction to GPU Computing, CUDA Programming Model, CUDA API, Simple Matrix, Multiplication in CUDA , CUDA Memory Model, Shared Memory Matrix Multiplication, Additional CUDA API Features						
Module:6	Achieving Performance					6 hours
Measuring performance, Identifying performance bottlenecks, Partitioning applications for heterogeneous resources, Using existing libraries and frameworks						
Module:7	HPC Benchmarks					5 hours
HTC, MTC (Many Task Computing), Top 500 Super computers in the world, Top 10 Super Computer architectural details, Exploring HPC Bechmarks: HPL, Stream.						

Module:8	Recent Trends	2 hours		
		Total Lecture hours:	45 hours	
Text Book(s)				
1.	Victor Eijkhout, Edmond Chow, Robert van de Geijn, Introduction to High Performance Scientific Computing, 2nd edition, revision 2016			
2.	Rob Farber, CUDA Application Design and Development, Morgan Kaufmann Publishers, 2013			
Reference Books				
1.	Zbigniew J. Czech, Introduction to parallel computing, 2nd edition, Cambridge University Press,2016			
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar

Approved by Academic Council		No. 37	Date	16-06-2015

CSE4015	HUMAN COMPUTER INTERACTION	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	Nil	Syllabus version				
		v. 1.0				
Course Objectives:						
<ol style="list-style-type: none"> To provide the basic knowledge on the levels of interaction, design models, techniques and validations focusing on the different aspects of human-computer interface and interactions To make the learners to think in design perspective and to evaluate interactive design To use the concepts and principles of HCI to analyze and propose solution for reallife applications To become familiar with recent technology trends and challenges in HCI domain 						
Expected Course Outcome:						
<ol style="list-style-type: none"> Enumerate the basic concepts of human, computer interactions Create the processes of human computer interaction life cycle Analyze and design the various interaction design models Apply the interface design standards/guidelines for evaluating the developed interactions Establish the different levels of communication across the application stakeholders Apply product usability evaluations and testing methods Demonstrate the principles of human computer interactions through the prototype modelling 						
Module:1	HCI FOUNDATIONS	6 hours				
Input–output channels, Human memory, Thinking: reasoning and problem solving, Emotion, Individual differences, Psychology and the design of interactive systems, Text entry devices, Positioning, pointing and drawing, Display devices, Devices for virtual reality and 3D interaction, Physical controls, sensors and special devices, Paper: printing and scanning						
Module:2	DESIGNING INTERACTION	6 hours				
Overview of Interaction Design Models, Discovery - Framework, Collection - Observation, Elicitation, Interpretation - Task Analysis, Storyboarding, Use Cases, Primary Stakeholder Profiles, Project Management Document						
Module:3	INTERACTION DESIGN MODELS	8 hours				
Model Human Processor - Working Memory, Long-Term Memory, Processor Timing, Keyboard Level Model - Operators, Encoding Methods, Heuristics for M Operator Placement, What the Keyboard Level Model Does Not Model, Application of the Keyboard Level Model, GOMS - CMN-GOMS Analysis, Modeling Structure, State Transition Networks - Three-State Model, Glimpse Model, Physical Models, Fitts' Law						
Module:4	GUIDE LINES IN HCI	6 hours				
Shneiderman's eight golden rules, Norman's Seven principles, Norman's model of interaction, Nielsen's ten heuristics, Heuristic evaluation, contextual evaluation, Cognitive walk-through						
Module:5	COLLABORATION AND COMMUNICATION	5 hours				
Face-to-face Communication, Conversation, Text-based Communication, Group working, Dialog design notations, Diagrammatic notations, Textual dialog notations, Dialog semantics, Dialog analysis and design						
Module:6	HUMAN FACTORS AND SECURITY	6 hours				
Groupware, Meeting and decision support systems, Shared applications and artifacts, Frameworks for groupware Implementing synchronous groupware, Mixed, Augmented and Virtual Reality						
Module:7	VALIDATION AND ADVANCED CONCEPTS	6 hours				
Validations - Usability testing, Interface Testing, User Acceptance Testing Past and future of HCI: the past, present and future, perceptual interfaces, context-awareness and perception						
Module:8	RECENT TRENDS	2 hours				

	Total Lecture hours:	45 hours

CSE4019	IMAGE PROCESSING				L	T	P	J	C
					3	0	0	4	4
Pre-requisite	Nil				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To provide the basic knowledge on image processing concepts. 2. To develop the ability to apprehend and implement various image processing algorithms. 3. To facilitate the students to comprehend the contextual need pertaining to various image processing applications. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Ascertain and describe the basics of image processing concepts through mathematical interpretation. 2. Acquire the knowledge of various image transforms and image enhancement techniques involved. 3. Demonstrate image restoration process and its respective filters required. 4. Experiment the various image segmentation and morphological operations for a meaningful partition of objects. 5. Design the various basic feature extraction and selection procedures and illustrate the various image compression techniques and their applications. 6. Analyze and implement image processing algorithms for various real-time applications. 									
Module:1	Introduction - Digital Image, its Representation				6 hours				
Image Representation and Image Processing Paradigm - Elements of digital image processing- Image model. Sampling and quantization-Relationships between pixels- Connectivity, Distance Measures between pixels - Color image (overview, various color models)-Various image formats bmp, jpeg, tiff, png, gif, etc.									
Module:2	Digital Image Properties - Operations on Digital Images				6 hours				
Topological Properties of Digital Images-Histograms, Entropy, Eigen Values-Image Quality Metrics-Noise in Images Sources, types. Arithmetic operations - Addition, Subtraction, Multiplication, Division-Logical operations NOT, OR, AND, XOR-Set operators-Spatial operations Single pixel, neighbourhood, geometric-Contrast Stretching-Intensity slicing-Bit plane slicing Power Law transforms									
Module:3	Image Enhancement				6 hours				
Spatial and Frequency domain-Histogram processing-Spatial filtering-Smoothening spatial filters- Sharpening spatial filters- Discrete Fourier Transform-Discrete Cosine Transform-Haar Transform -Hough Transform-Frequency filtering-Smoothening frequency filters-Sharpening frequency filters-Selective filtering.									
Module:4	Digital Image Restoration- Digital Image Registration				7 hours				
Noise models - Degradation models-Methods to estimate the degradation-Image de-blurring- Restoration in the presence of noise only spatial filtering-Periodic noise reduction by frequency domain filtering-Inverse filtering-Wiener Filtering. Geometrical transformation-Point based methods- Surface based methods-Intensity based methods									

Module:5	Feature Extraction	6 hours	
Region of interest (ROI) selection - Feature extraction: Histogram based features - Intensity features-Color, Shape features-Contour extraction and representation-Homogenous region extraction and representation-Texture descriptors - Feature Selection: Principal Component Analysis (PCA).			
Module:6	Image Segmentation- Morphological Image Processing	6 hours	
Discontinuity detection-Edge linking and boundary detection. Thresholding-Region oriented segmentation- Histogram based segmentation.Object recognition based on shape descriptors. Dilation and Erosion-Opening and Closing-Medial axis transforms-Objects skeletons-Thinning boundaries.			
Module:7	Image Coding and Compression	6 hours	
Lossless compression versus lossy compression-Measures of the compression efficiency- Huffman coding-Bitplane coding-Shift codes-Block Truncation coding-Arithmetic coding-Predictive coding techniques-Lossy compression algorithm using the 2-D. DCT transform-The JPEG 2000 standard Baseline lossy JPEG, based on DWT.			
Module:8	Recent Trends	2 hours	
		Total Lecture hours:	45 hours
Text Book(s)

CSE4020	MACHINE LEARNING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	Nil				Syllabus version				
					v1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. Ability to comprehend the concept of supervised and unsupervised learning techniques 2. Differentiate regression, classification and clustering techniques and to implement their algorithms. 3. To analyze the performance of various machine learning techniques and to select appropriate features for training machine learning algorithms. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Recognize the characteristics of machine learning that makes it useful to solve real-world problems. 2. Provide solution for classification and regression approaches in real-world applications. 3. Gain knowledge to combine machine learning models to achieve better results. 4. Choose an appropriate clustering technique to solve real world problems. 5. Realize methods to reduce the dimension of the dataset used in machine learning algorithms. 6. Choose a suitable machine learning model, implement and examine the performance of the chosen model for a given real world problems. 7. Understand cutting edge technologies related to machine learning applications. 									
Module:1	Introduction to Machine Learning				3 hours				
What is Machine Learning, Examples of Various Learning Paradigms, Perspectives and Issues, Version Spaces, Finite and Infinite Hypothesis Spaces, PAC Learning									
Module:2	Supervised Learning - I				4 hours				
Learning a Class from Examples, Linear, Non-linear, Multi-class and Multi-label classification, Generalization error bounds: VC Dimension, Decision Trees: ID3, Classification and Regression Trees, Regression: Linear Regression, Multiple Linear Regression, Logistic Regression.									
Module:3	Supervised Learning - II				5 hours				
Neural Networks: Introduction, Perceptron, Multilayer Perceptron, Support vector machines: Linear and Non-Linear, Kernel Functions, K-Nearest Neighbors									
Module:4	Ensemble Learning				3 hours				
Ensemble Learning Model Combination Schemes, Voting, Error-Correcting Output Codes, Bagging: Random Forest Trees, Boosting: Adaboost, Stacking									
Module:5	Unsupervised Learning - I				7 hours				
Introduction to clustering, Hierarchical: AGNES, DIANA, Partitional : K-means clustering, K-Mode Clustering, Self-Organizing Map, Expectation Maximization, Gaussian Mixture Models									
Module:6	Unsupervised Learning - II				3 hours				
Principal components analysis (PCA), Locally Linear Embedding (LLE), Factor Analysis									
Module:7	Machine Learning in Practice				3 hours				
Machine Learning in Practice Design, Analysis and Evaluation of Machine Learning Experiments, Feature selection Mechanisms, Other Issues: Imbalanced data, Missing Values, Outliers									
Module:8	Recent Trends				2 hours				
Industry Expert talk									

	Total Lecture hours:	30 hours	
Text Book(s)			
1.	Ethem Alpaydin, Introduction to Machine Learning , MIT Press, Prentice Hall of India, Third Edition 2014

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Implement Decision Tree learning.		2 hours
2.	Implement Logistic Regression.		2 hours
3.	Implement classification using Multilayer perceptron.		2 hours
4.	Implement classification using SVM		2 hours
5.	Implement Adaboost		2 hours
6.	Implement Bagging using Random Forests		2 hours
7.	Implement K-means Clustering to Find Natural Patterns in Data.		2 hours
8.	Implement Hierarchical clustering.		2 hours
9.	Implement K-mode clustering		2 hours
10	Implement Principle Component Analysis for Dimensionality Reduction.		2 hours
.			
11	Implement Multiple Correspondence Analysis for Dimensionality Reduction.		2 hours
.			
12	Implement Gaussian Mixture Model Using the Expectation Maximization.		2 hours
.			
13	Evaluating ML algorithm with balanced and unbalanced datasets.		2 hours
.			
14	Comparison of Machine Learning algorithms.		2 hours
.			
15.	Implement k-nearest neighbors algorithm		2 hours
Total Laboratory Hours			30 hours

CSE4022	NATURAL LANGUAGE PROCESSING	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	Nil	Syllabus version				
		v1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To introduce the fundamental concepts and techniques of Natural language Processing for analyzing words based on Morphology and CORPUS. 2. To examine the NLP models and interpret algorithms for classification of NLP sentences by using both the traditional, symbolic and the more recent statistical approach. 3. To get acquainted with the algorithmic description of the main language levels that includes morphology, syntax, semantics, and pragmatics for information retrieval and machine translation applications. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Understand the principles and Process the Human Languages Such as English and other Indian Languages using computers. 2. Creating CORPUS linguistics based on digestive approach (Text Corpus method) 3. Demonstrate understanding of state-of-the-art algorithms and techniques for text-based processing of natural language with respect to morphology. 4. Perform POS tagging for a given natural language. 5. Select a suitable language modelling technique based on the structure of the language. 6. Check the syntactic and semantic correctness of sentences using grammars and labelling. 7. Develop Computational Methods for Real World Applications and explore deeplearning based NLP 						
Module:1	INTRODUCTION TO NLP	3 hours				
Introduction to various levels of natural language processing, Ambiguities and computational challenges in processing various natural languages. Introduction to Real life applications of NLP such as spell and grammar checkers, information extraction, question answering, and machine translation.						
Module:2	TEXT PROCESSING	6 hours				
Character Encoding, Word Segmentation, Sentence Segmentation, Introduction to Corpora, Corpora Analysis.						
Module:3	MORPHOLOGY	6 hours				
Inflectional and Derivation Morphology, Morphological Analysis and Generation using finite state transducers.						
Module:4	LEXICAL SYNTAX	6 hours				
Introduction to word types, POS Tagging, Maximum Entropy Models for POS tagging, Multi-word Expressions.						
Module:5	LANGUAGE MODELING	6 hours				
The role of language models. Simple N-gram models. Estimating parameters and smoothing. Evaluating language models.						
Module:6	SYNTAX & SEMANTICS	10 hours				
Introduction to phrases, clauses and sentence structure, Shallow Parsing and Chunking, Shallow Parsing with Conditional Random Fields (CRF), Lexical Semantics, Word Sense Disambiguation, WordNet, Thematic Roles, Semantic Role Labelling with CRFs.						
Module:7	APPLICATIONS OF NLP	6 hours				
NL Interfaces, Text Summarization, Sentiment Analysis, Machine Translation, Question answering.						
Module:8	RECENT TRENDS	2 hours				

Recent Trends in NLP			
	Total Lecture hours:		45 hours
Text Book(s)			
1.	Daniel Jurafsky and James H. Martin “Speech and Language Processing”, 3rd edition, Prentice Hall, 2009.		
Reference Books			
1.	Chris Manning and HinrichSchütze, “Foundations of Statistical Natural Language Processing”, 2nd edition, MITPress Cambridge, MA, 2003.		
2.	NitinIndurkhya, Fred J. Damerau “Handbook of Natural Language Processing”, Second Edition, CRC Press, 2010.		
3.	James Allen “Natural Language Understanding”, Pearson Publication 8th Edition. 2012.		
Mode of Evaluation: Continuous Assessment Test –I (CAT-I), Continuous Assessment Test –II (CAT-II), Digital Assignments/ Quiz / Completion of MOOC, Final Assessment Test (FAT).

Approved by Academic Council		No. 37	Date 16-06-2015

CSE4027	MOBILE PROGRAMMING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	Nil				Syllabus version				
					v. 1.0				
Course Objectives:									
1. Students able to learn to write both web apps and native apps for Android using Eclipse and the Android SDK, to write native apps for iPhones, iPod Touches, and iPads using Xcode and the iOS SDK, and to write web apps for both platforms. The course also touches on Windows 8 application programming, so as to provide students with a stepping stone for application development in the mobile operating system of their choice. Additional topics covered include application deployment and availability on the corresponding app stores and markets, application security, efficient power management, and mobile device security									
Expected Course Outcome:									
1.Exposed to technology and business trends impacting mobile applications. 2.Competent with the characterization and architecture of mobile applications. 3.Competent with designing and developing mobile applications using one application development framework.									
Module:1	Introduction to Mobile Devices				4 hours				
Mobile vs.desktop devices and architecture -Power Management-Screen resolution -Touch interfaces -Application deployment -App Store, Google Play, Windows Store -Development environments-XCode- Eclipse -VS2012-PhoneGAP-Native vs. web applications									
Module:2	HTML5/JS/CSS3				4 hours				
Quick recap of technologies -Mobile-specific enhancements -Browser- detection-Touch interfaces - Geolocation -Screen orientation-Mobile browser “interpretations”(Chrome/Safari/Gecko/IE)- Case studies().									
Module:3	Mobile OS Architecture				3 hours				
Comparing and Contrasting architectures of all three – Android, iOS and Windows-Underlying OS (Darwin vs. Linux vs. Win 8) -Kernel structure and native level programming -Runtime (Objective-C vs. Dalvik vsWinRT) -Approaches to power management - Security									
Module:4	Android/iOS/Win 8 Survival and basic				3 hours				
Building Application(iOS, Window, Android).- App structure, built-in Controls, file access, basic graphics Android/iOS/Win8 inbuilt APP- DB access, network access, contacts/photos									
Module:5	Underneath the frameworks				4 hours				
Native level programming on Android -Low-level programming on (jailbroken) iOS-Windows low level APIs									
Module:6	Power Management				4 hours				
Wake locks and assertions -Low-level OS support -Writing power-smart applications									
Module:7	Augmented Reality(AR) and Mobile Security				6 hours				
Web and AR-User interface-Mobile AR-evaluation of AR- standardization-GPS-Accelerometer - Camera -Mobile malware -Device protections - Mobile Security - overview of the current mobile threat landscape-An assessment of your current mobile security solution- complete analysis of your current risks- Recommendations on how to secure your company’s mobile devices from advanced threats and targeted attacks									
Module:8	Recent Trends				2 hours				
Industry Expert talk									

	Total Lecture hours:	30 hours
Text Book(s)		
1.	Rajiv Ramnath, Roger Crawfis, and Paolo Sivilotti, Android SDK3 for Dummies, Wiley 2011.	
Reference Books		
1.	Valentino Lee, Heather Schneider, and Robbie Schell, Mobile Applications: Architecture, Design, and Development , Prentice Hall , 2004.	
2.	Brian Fling, Mobile Design and Development O'Reilly Media, 2009	
3.	Maximiliano Firtman Programming the Mobile Web , O'Reilly Media, 2010.	
4.	Christian Crumlish and Erin Malone Designing Social Interfaces, O'Reilly Media , 2009	
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
List of Challenging Experiments (Indicative)		
1.	<p>1. Get the HelloVIT midlet on the "getting started" page working.</p> <p>2. Make some changes - e.g. the text of the String item.</p> <p>3. Put in an error - e.g. divide by zero, to see how the development environment attempts to point out on the PC when a runtime error occurs on the phone emulator.</p> <p>4. Get the MIDlet "First MIDlet Program" in the handout working (ok, so it's really our second MIDlet). Copy the code from the handout.</p> <p>5. Modify the MIDlet by adding these additional items to the form e.g. TextField, DateField, Gauge. Look up the lcdui package to see what Items can be added and the parameters needed..</p> <p>6. You can output to the PC console while the program is running e.g. place this code in the constructor:</p> <p><i>System.out.println("in Constructor"); // This will output on the PC console, not on the phone</i></p> <p>7. Now add <i>:System.out.println("in CommandAction method");</i> to the Command Action method to see when that method is running.</p> <p>8. Add more <i>System.out.println</i>'s in the following methods:</p> <ol style="list-style-type: none"> 1. startApp 2. pauseApp 3. destroyApp <p>9. Note the sequence of method calls from MIDlet start to end.</p>	4 Hours
2	<p>First MIDlet - adding a new command</p> <p>1. Continue to add to 2.0 First MIDlet by adding an "OK" command (look up the API command class)</p> <p>2. Have the "OK" command display on the phone's screen.</p> <p>3. Add code to process the "OK" command</p> <p>4. In the actionPerformed method display the contents of the TextField using System.out.println ()</p> <p>5. Add two more commands e.g. Send, Spell Check.</p> <p>6. Where were they placed?</p> <p>7. Add code to check for these commands - add System.out.println's to show When that code is being executed.</p>	4 Hours

	<p>8. Now use System.out.println in the OK processing code and see the text being modified while the program runs.</p> <p>9. Add another System.out.println in the OK to display the value of the gauge (if it's not interactive, go back to the API to see how to make it interactive)</p>	
3	<p>Additon MIDlet</p> <p>1. Create a MIDlet that allows you to enter a number. The number is then added to any previous number and the running total result is displayed. Use a TextBox to receive text from the user (instead of a Form as in the previous example).</p> <p>2. Can you crash the program by entering text instead of numbers? If you can then constrain the user input to numbers only.</p>	4 Hours
4	<p>Additon MIDlet on a real phone</p> <p>1. For the addition MIDlet : Use the IDE to Create a JAR file.</p> <p>2. (Optionally) Transfer the JAR file to your phone and test. See handout on how to create and deploy a JAR file.</p>	4 Hours
5	<p>Battery Status</p> <p>Create an MIDlet that displays a coloured bar to display a car battery's status. The battery voltage is entered into the MIDlet as a floating point number. Display a bar graph as follows: 0-9.5 - Red (battery dead) >9.6 <12 - Yellow (battery poor) >12 <14.4 - Green (battery good) >14.4 - Blue (Alternator faulty)</p>	4 Hours
6	<p>Secret Text</p> <p>Develop an MIDlet that has a TextField and Label GUI components. When a piece of text is entered the MIDlet 'encrypts' the text by replacing each letter using the following mapping: MLKJIHGFEDCBA NOPQRSTUVWXYZ So A -> Z, N-> M, B-> Y, O->L etc Display the encrypted text back in the TextField (so pressing enter should give you back the original text). Display the length of the entered text using the Label.</p> <p>Develop an MIDlet that has a TextField and Label GUI components. When a piece of text is entered the MIDlet 'encrypts' the text by replacing each letter using the following mapping: MLKJIHGFEDCBA NOPQRSTUVWXYZ So A -> Z, N-> M, B-> Y, O->L etc Display the encrypted text back in the TextField (so pressing enter should give you back the original text). Display the length of the entered text using the Label.</p>	5 Hours
7	<p>Missing Letter Game</p> <p>Develop an MIDlet or application that displays a word at random with a random letter(s) missing. The user has to guess the missing letter(s) by entering it/them into a text field(s). You can use an array or vector to store some words internally in the program.</p>	5 hours

CSE4028	OBJECT ORIENTED SOFTWARE DEVELOPMENT	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				
		V1.0				
Course Objectives (Cobs):						
<p>1. To make the students understand the essential and fundamental aspects of object oriented concepts along with their applications.</p> <p>2.To discuss and explore different analysis models, design and implement models of object-oriented software systems by means of a mid-sized project.</p> <p>3.To teach the students a solid foundation on different software development life cycle of Object-Oriented solutions for Real-World Problems</p>						
Expected Course Outcome (Cos):						
<p>1. Identify and select suitable Process Model for the given problem and have a thorough understanding of various Software Life Cycle models.</p> <p>2. Analyze the requirements of the given software project and produce requirement specifications.</p> <p>3.Apply the knowledge of object-oriented modelling concepts and design methods with a clear emphasis on Unified Modelling Language for a moderately realistic object oriented system.</p> <p>4. Apply various software architectures, including frameworks and design patterns, when developing software projects.</p> <p>5. Evaluate the software project using various Testing techniques.</p> <p>6.Predict the deployment strategy of the software project.</p> <p>7.Recognize the Configuration Management strategies of the software project</p>						
Module:1	INTRODUCTION TO SOFTWARE DEVELOPMENT	4 hours				
The Challenges of Software Development – An Engineering Perspective – Object-Orientation - Iterative Development Processes						
Module:2	PROCESS MODELS	3 hours				
Life cycle models – Unified Process – Iterative and Incremental – Workflow – Agile Processes						
Module:3	MODELING – OO SYSTEMS	4 hours				
Requirements Elicitation – Use Cases – Unified Modeling Language, Tools						
Module:4	ANALYSIS	4 hours				
Analysis Object Model (Domain Model) – Analysis Dynamic Models – Non-functional requirements – Analysis Patterns.						
Module:5	DESIGN	4 hours				
System Design, Architecture – Design Principles - Design Patterns – Dynamic Object Modeling – Static Object Modeling – Interface Specification – Object Constraint Language						
Module:6	DESIGN PATTERNS	5 hours				
Introduction – Design Patterns in Smalltalk MVC – Describing Design patterns –Catalog of Design Patterns- Organizing the Catalog –How Design Patterns Solve Design Problems – How to select a Design Pattern – How to use a Design Pattern – What makes a pattern? – Pattern Categories – Relationship between Patterns – Patterns and Software Architecture						

Module:7	IMPLEMENTATION, DEPLOYMENT AND MAINTENANCE	4 hours	
Mapping Design (Models) to Code – Testing - Usability – Deployment – Configuration Management – Maintenance			
Module:8	RECENT TRENDS	2 hours	
Recent Trends in Object oriented Software Development			
		Total Lecture hours:	30 hours

MAT2002	Applications of Differential and Difference Equations	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	MAT1011 - Calculus for Engineers	Syllabus Version				
		v1.0				
Course Objectives:						
The course is aimed at						
1. Presenting the elementary notions of Fourier series, which is vital in practical harmonic analysis						
2. Imparting the knowledge of eigenvalues and eigen vectors of matrices and the transform techniques to solve linear systems, that arise in sciences and engineering						
3. Enriching the skills in solving initial and boundary value problems						
4. Impart the knowledge and application of difference equations and the Z-transform in discrete systems, that are inherent in natural and physical processes						
Expected Course Outcomes:						
At the end of the course the student should be able to						
1. Employ the tools of Fourier series to find harmonics of periodic functions from the tabulated values						
2. Apply the concepts of eigenvalues, eigen vectors and diagonalisation in linear systems						
3. Know the techniques of solving differential equations						
4. Understand the series solution of differential equations and finding eigen values, eigen functions of Sturm-Liouville's problem						
5. Know the Z-transform and its application in population dynamics and digital signal processing						
6. Demonstrate MATLAB programming for engineering problems						
Module:1	Fourier series	6 hours				
Fourier series - Euler's formulae - Dirichlet's conditions - Change of interval - Half range series - RMS value - Parseval's identity - Computation of harmonics						
Module:2	Matrices	6 hours				
Eigenvalues and Eigen vectors - Properties of eigenvalues and eigen vectors - Cayley-Hamilton theorem - Similarity of transformation - Orthogonal transformation and nature of quadratic form						
Module:3	Solution of ordinary differential equations	6 hours				
Linear second order ordinary differential equation with constant coefficients - Solutions of homogenous and non-homogenous equations - Method of undetermined coefficients - method of variation of parameters - Solutions of Cauchy-Euler and Cauchy-Legendre differential equations						
Module:4	Solution of differential equations through Laplace transform and matrix method	8 hours				
Solution of ODE's - Nonhomogeneous terms involving Heaviside function, Impulse function - Solving nonhomogeneous system using Laplace transform - Reduction of n th order differential equation to first order system - Solving nonhomogeneous system of first order differential equations ($X' = AX + G$) and $X'' = AX$.						
Module:5	Sturm Liouville's problems and power series Solutions	6 hours				
The Sturm-Liouville's Problem - Orthogonality of Eigen functions - Series solutions of differential equations about ordinary and regular singular points - Legendre differential equation - Bessel's differential equation						
Module:6	Z-Transform	6 hours				
Z-transform - transforms of standard functions - Inverse Z-transform: by partial fractions and convolution method						

Module:7	Difference equations			5 hours
Difference equation - First and second order difference equations with constant coefficients - Fibonacci sequence - Solution of difference equations - Complementary function - Particular integral by the method of undetermined coefficients - Solution of simple difference equations using Z-transform				
Module:8	Contemporary Issues			2 hours
Industry Expert Lecture				
			Total Lecture hours:	45 hours
Text Book(s)				
1.	Advanced Engineering Mathematics, Erwin Kreyszig, 10 th Edition, John Wiley India, 2015			
Reference Books				
1.	Higher Engineering Mathematics, B. S. Grewal, 43 rd Edition, Khanna Publishers, India, 2015			
2.	Advanced Engineering Mathematics by Michael D. Greenberg, 2 nd Edition, Pearson Education, Indian edition, 2006			
Mode of Evaluation				
Digital Assignments (Solutions by using soft skills), Continuous Assessment Tests, Quiz, Final Assessment Test				
1.	Solving Homogeneous differential equations arising in engineering problems			2 hours
2.	Solving non-homogeneous differential equations and Cauchy, Legendre equations			2 hours
3.	Applying the technique of Laplace transform to solve differential equations			2 hours
4.	Applications of Second order differential equations to Mass spring system (damped, undamped, Forced oscillations), LCR circuits etc.			2 hours
5.	Visualizing Eigen value and Eigen vectors			2 hours
6.	Solving system of differential equations arising in engineering applications			2 hours
7.	Applying the Power series method to solve differential equations arising in engineering applications			3 hours
8.	Applying the Frobenius method to solve differential equations arising in engineering applications			3 hours
9.	Visualising Bessel and Legendre polynomials			3 hours
10.	Evaluating Fourier series-Harmonic series			3 hours
11.	Applying Z-Transforms to functions encountered in engineering			3 hours
12.	Solving Difference equations arising in engineering applications			3 hours
			Total Laboratory Hours	30 hours
Mode of Evaluation: Weekly Assessment, Final Assessment Test				
Recommended by Board of Studies		25-02-2017		
Approved by Academic Council		No. 47	Date	05-10-2017

UNIVERSITY CORE

CHY1701	Engineering Chemistry (UC)	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	Chemistry of 12th standard or equivalent	Syllabus version				
		1.1				
Course Objectives:						
1. To impart technological aspects of applied chemistry						
2. To lay foundation for practical application of chemistry in engineering aspects						
Expected Course Outcomes (CO): Students will be able to						
1. Recall and analyze the issues related to impurities in water and their removal methods and apply recent methodologies in water treatment for domestic and industrial usage						
2. Evaluate the causes of metallic corrosion and apply the methods for corrosion protection of metals						
3. Evaluate the electrochemical energy storage systems such as lithium batteries, fuel cells and solar cells, and design for usage in electrical and electronic applications						
4. Assess the quality of different fossil fuels and create an awareness to develop the alternative fuels						
5. Analyze the properties of different polymers and distinguish the polymers which can be degraded and demonstrate their usefulness						
6. Apply the theoretical aspects: (a) in assessing the water quality; (b) understanding the construction and working of electrochemical cells; (c) analyzing metals, alloys and soil using instrumental methods; (d) evaluating the viscosity and water absorbing properties of polymeric materials						
Module:1	Water Technology	5 hours				
Characteristics of hard water - hardness, DO, TDS in water and their determination – numerical problems in hardness determination by EDTA; Modern techniques of water analysis for industrial use - Disadvantages of hard water in industries.						
Module:2	Water Treatment	8 hours				
Water softening methods: - Lime-soda, Zeolite and ion exchange processes and their applications. Specifications of water for domestic use (ICMR and WHO); Unit processes involved in water treatment for municipal supply - Sedimentation with coagulant- Sand Filtration - chlorination; Domestic water purification – Candle filtration- activated carbon filtration; Disinfection methods- Ultrafiltration, UV treatment, Ozonolysis, Reverse Osmosis; Electro dialysis.						
Module:3	Corrosion	6 hours				
Dry and wet corrosion - detrimental effects to buildings, machines, devices & decorative art forms, emphasizing Differential aeration, Pitting, Galvanic and Stress corrosion cracking; Factors that enhance corrosion and choice of parameters to mitigate corrosion.						
Module:4	Corrosion Control	4 hours				
Corrosion protection - cathodic protection – sacrificial anodic and impressed current protection methods; Advanced protective coatings: electroplating and electroless plating, PVD and CVD.						
Alloying for corrosion protection – Basic concepts of Eutectic composition and Eutectic mixtures - Selected examples – Ferrous and non-ferrous alloys.						
Module:5	Electrochemical Energy Systems	6 hours				
Brief introduction to conventional primary and secondary batteries; High energy electrochemical energy systems: Lithium batteries – Primary and secondary, its Chemistry, advantages and applications.						
Fuel cells – Polymer membrane fuel cells, Solid-oxide fuel cells- working principles, advantages, applications.						
Solar cells – Types – Importance of silicon single crystal, polycrystalline and amorphous silicon solar cells, dye sensitized solar cells - working principles, characteristics and applications.						
Module:6	Fuels and Combustion	8 hours				
Calorific value - Definition of LCV, HCV. Measurement of calorific value using bomb calorimeter and Boy's calorimeter including numerical problems.						
Controlled combustion of fuels - Air fuel ratio – minimum quantity of air by volume and by weight- Numerical problems- three way catalytic converter- selective catalytic reduction of NO _x ; Knocking in IC engines-Octane and Cetane number - Antiknocking agents.						

Module:7	Polymers	6 hours	
Difference between thermoplastics and thermosetting plastics; Engineering application of plastics - ABS, PVC, PTFE and Bakelite; Compounding of plastics: moulding of plastics for Car parts, bottle caps (Injection moulding), Pipes, Hoses (Extrusion moulding), Mobile Phone Cases, Battery Trays, (Compression moulding), Fibre reinforced polymers, Composites (Transfer moulding), PET bottles (blow moulding);			
Conducting polymers- Polyacetylene- Mechanism of conduction – applications (polymers in sensors, self-cleaning windows)			
Module:8	Contemporary issues:	2 hours	
Lecture by Industry Experts			
		Total Lecture hours:	45 hours
Text Book(s)

Mode of Evaluation: Internal Assessment (CAT, Quizzes, Digital Assignments) & FAT			
List of Experiments			
	Experiment title	Hours	
1.	Water Purification: Estimation of water hardness by EDTA method and its removal by ion-exchange resin	1 h 30 min	
2.	Water Quality Monitoring: Assessment of total dissolved oxygen in different water samples by Winkler's method	3 h	
3.	Estimation of sulphate/chloride in drinking water by conductivity method		
4/5	Material Analysis: Quantitative colorimetric determination of divalent metal ions of Ni/Fe/Cu using conventional and smart phone digital-imaging methods	3h	
6.	Analysis of Iron in carbon steel by potentiometry	1 h 30 min	
7.	Construction and working of an Zn-Cu electrochemical cell	1 h 30 min	
8.	Determination of viscosity-average molecular weight of different natural/synthetic polymers	1 h 30 min	
9.	Arduino microcontroller based sensor for monitoring pH/temperature/conductivity in samples.	1 h 30 min	
Total Laboratory Hours			17 hours
Mode of Evaluation: Viva-voce and Lab performance & FAT

Course code	PROBLEM SOLVING AND PROGRAMMING					L	T	P	J	C
CSE1001						0	0	6	0	3
Pre-requisite	NIL					Syllabus version				
						v1.0				
Course Objectives:										
<ol style="list-style-type: none"> To develop broad understanding of computers, programming languages and their generations Introduce the essential skills for a logical thinking for problem solving To gain expertise in essential skills in programming for problem solving using computer 										
Expected Course Outcome:										
<ol style="list-style-type: none"> Understand the working principle of a computer and identify the purpose of a computer programming language. Learn various problem solving approaches and ability to identify an appropriate approach to solve the problem Differentiate the programming Language constructs appropriately to solve any problem Solve various engineering problems using different data structures Able to modulate the given problem using structural approach of programming Efficiently handle data using flat files to process and store data for the given problem 										
List of Challenging Experiments (Indicative)										
1	Steps in Problem Solving Drawing flowchart using yEd tool/Raptor Tool							4 Hours		
2	Introduction to Python, Demo on IDE, Keywords, Identifiers, I/O Statements							4 Hours		
3	Simple Program to display Hello world in Python							4 Hours		
4	Operators and Expressions in Python							4 Hours		
5	Algorithmic Approach 1: Sequential							4 Hours		
6	Algorithmic Approach 2: Selection (if, elif, if.. else, nested if else)							4 Hours		
7	Algorithmic Approach 3: Iteration (while and for)							6 Hours		
8	Strings and its Operations							6 Hours		
9	Regular Expressions							6 Hours		
10	List and its operations							6 Hours		
11	Dictionaries: operations							6 Hours		
12	Tuples and its operations							6 Hours		
13	Set and its operations							6 Hours		
14	Functions, Recursions							6 Hours		
15	Sorting Techniques (Bubble/Selection/Insertion)							6 Hours		
16	Searching Techniques : Sequential Search and Binary Search							6 Hours		
17	Files and its Operations							6 Hours		
								Total hours:	90 hours

CSE1002	PROBLEM SOLVING AND OBJECT ORIENTED PROGRAMMING	L	T	P	J	C
		0	0	6	0	3
Pre-requisite	Nil	Syllabus version				
v. 1.0						
Course Objectives:						
1. To emphasize the benefits of object oriented concepts. 2. To enable students to solve the real time applications using object oriented programming features 3. To improve the skills of a logical thinking and to solve the problems using any processing elements						
Expected Course Outcome:						
1. Demonstrate the basics of procedural programming and to represent the real world entities as programming constructs. 2. Enumerate object oriented concepts and translate real-world applications into graphical representations. 3. Demonstrate the usage of classes and objects of the real world entities in applications. 4. Discriminate the reusability and multiple interfaces with same functionality based features to solve complex computing problems. 5. Illustrate possible error-handling constructs for unanticipated states/inputs and to use generic programming constructs to accommodate different datatypes. 6. Validate the program against file inputs towards solving the problem..						
List of Challenging Experiments (Indicative)						
1.	Postman Problem A postman needs to walk down every street in his area in order to deliver the mail. Assume that the distances between the streets along the roads are given. The postman starts at the post office and returns back to the post office after delivering all the mails. Implement an algorithm to help the post man to walk minimum distance for the purpose.	10 hours				
2.	Budget Allocation for Marketing Campaign A mobile manufacturing company has got several marketing options such as Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall spent on each marketing option so that the company attains the maximum profit.	15 hours				
3.	Missionaries and Cannibals Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.	10 hours				
4.	Register Allocation Problem A register is a component of a computer processor that can hold any type of	15 hours				

	<p>data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and an edge is added between two nodes (variables) t1 and t2 if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution</p>	
5.	<p>Selective Job Scheduling Problem A server is a machine that waits for requests from other machines and responds to them. The purpose of a server is to share hardware and software resources among clients. All the clients submit the jobs to the server for execution and the server may get multiple requests at a time. In such a situation, the server schedule the jobs submitted to it based on some criteria and logic. Each job contains two values namely time and memory required for execution. Assume that there are two servers that schedules jobs based on time and memory. The servers are named as Time Schedule Server and memory Schedule Server respectively. Design a OOP model and implement the time Schedule Server and memory Schedule Server. The Time Schedule Server arranges jobs based on time required for execution in ascending order whereas memory Schedule Server arranges jobs based on memory required for execution in ascending order</p>	15 hours
6.	<p>Fragment Assembly in DNA Sequencing DNA, or deoxyribonucleic acid, is the hereditary material in humans and almost all other organisms. The information in DNA is stored as a code made up of four chemical bases: adenine (A), guanine (G), cytosine (C), and thymine (T). In DNA sequencing, each DNA is sheared into millions of small fragments (reads) which assemble to form a single genomic sequence (superstring). Each read is a small string. In such a fragment assembly, given a set of reads, the objective is to determine the shortest superstring that contains all the reads. For example, given a set of strings, 000, 001, 010, 011, 100, 101, 110, 111 the shortest superstring is 0001110100. Given a set of reads, implement an algorithm to find the shortest superstring that contains all the given reads.</p>	15 hours
7.	<p>House Wiring An electrician is wiring a house which has many rooms. Each room has many power points in different locations. Given a set of power points and the distances between them, implement an algorithm to find the minimum cable required.</p>	10 hours
Total Laboratory Hours		90 hours

CSE1902	Industrial Internship				L	T	P	J	C	
		0	0	0	0	1				
Pre-requisite	Completion of minimum of Two semesters									
Course Objectives:										
The course is designed so as to expose the students to industry environment and to take up on-site assignment as trainees or interns.										
Expected Course Outcome:										
At the end of this internship the student should be able to:										
<ol style="list-style-type: none"> 1. Have an exposure to industrial practices and to work in teams 2. Communicate effectively 3. Understand the impact of engineering solutions in a global, economic, environmental and societal context 4. Develop the ability to engage in research and to involve in life-long learning 5. Comprehend contemporary issues 6. Engage in establishing his/her digital footprint 										
Contents						4	Weeks			
Four weeks of work at industry site. Supervised by an expert at the industry.										
Mode of Evaluation: Internship Report, Presentation and Project Review										
Recommended by Board of Studies					28-02-2016					
Approved by Academic Council					No. 37	Date	16-06-2015			

CSE1901	Technical Answers for Real World Problems (TARP)	L	T	P	J	C
		1	0	0	4	2
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
<ul style="list-style-type: none"> To help students to identify the need for developing newer technologies for industrial / societal needs To train students to propose and implement relevant technology for the development of the prototypes / products To make the students learn to use the methodologies available for analysing the developed prototypes / products 						
Expected Course Outcome:						
At the end of the course, the student will be able to						
<ol style="list-style-type: none"> Identify real life problems related to society Apply appropriate technology(ies) to address the identified problems using engineering principles and arrive at innovative solutions 						
Module:1		15 hours				
<ol style="list-style-type: none"> Identification of real life problems Field visits can be arranged by the faculty concerned 6 – 10 students can form a team (within the same / different discipline) Minimum of eight hours on self-managed team activity Appropriate scientific methodologies to be utilized to solve the identified issue Solution should be in the form of fabrication/coding/modeling/product design/process design/relevant scientific methodology(ies) Consolidated report to be submitted for assessment Participation, involvement and contribution in group discussions during the contact hours will be used as the modalities for the continuous assessment of the theory component Project outcome to be evaluated in terms of technical, economical, social, environmental, political and demographic feasibility Contribution of each group member to be assessed The project component to have three reviews with the weightage of 20:30:50 						
Mode of Evaluation: (No FAT) Continuous Assessment the project done – Mark weightage of 20:30:50 – project report to be submitted, presentation and project reviews

CSE1903	Comprehensive Examination			L	T	P	J	C
				0	0	0	0	1
Pre-requisite				Syllabus version				
				1.00				
Digital Logic and Microprocessor								
Simplification of Boolean functions using K-Map – Combinational logic: Adder, subtractor, encoder, decoder, multiplexer, de-multiplexer – Sequential Logic: Flip flops- 8086 Microprocessor: instructions – peripherals: 8255, 8254, 8257.								
Computer Architecture and Organization								
Instructions - Instruction types- Instruction Formats - Addressing Modes- Pipelining- Data Representation - Memory Hierarchy- Cache memory-Virtual Memory- I/O Fundamentals- I/O Techniques - Direct Memory Access - Interrupts-RAID architecture								
Programming, Data Structures and Algorithms								
Programming in C; Algorithm Analysis – Iterative and Recursive Algorithms; ADT - Stack and its Applications - Queue and its Applications; Data Structures – Arrays and Linked Lists; Algorithms - Sorting – Searching; Trees – BST, AVL; Graphs – BFS , DFS , Dijkstra's Shortest Path Algorithm.								
Theory of Computation								
Deterministic Finite Automata, Non deterministic Finite Automata, Regular Expressions, Context Free Grammar, Push down Automata and Context Free Languages, Turing Machines.								
Web Technologies								
Web Architecture- JavaScript – objects String, date, Array, Regular Expressions, DHTML- HTML DOM Events; Web Server – HTTP- Request/Response model-RESTful methods- State Management – Cookies , Sessions – AJAX.								
Operating Systems								
Processes, Threads, Inter-process communication, CPU scheduling, Concurrency and synchronization, Deadlocks, Memory management and Virtual memory & File systems.								
Database Management System								
DBMS, Schema, catalog, metadata, data independence, pre-compiler; Users-naïve, sophisticated, casual ;ER Model- Entity, attributes, structural constraints; Relational Model-Constraints, Relational Algebra operations; SQL- DDL, DML, TCL, DCL commands, basic queries and Top N queries; Normalization-properties, 1NF, 2NF, 3NF, BCNF; Indexing-different types, Hash Vs B-tree Index; Transaction-problems, Concurrency Control-techniques, Recovery-methods.								
Data Communication and Computer Networks								
Circuit Switching, Packet Switching, Frame Relay, Cell Switching, ATM , OSI Reference model, TCP/IP, Network topologies, LAN Technologies, Error detection and correction techniques, Internet protocols , IPv4/IPv6, Routing algorithms, TCP and UDP, Sockets, Congestion control, Application Layer Protocols, Network Security: Basics of public and private key cryptosystems-Digital Signatures and Hash codes, Transport layer security, VPN, Firewalls.

CSE1904	Capstone Project				L	T	P	J	C
		0	0	0	0	0	0	0	12
Pre-requisite	As per the academic regulations				Syllabus version				
									v. 1.0
Course Objectives:									
To provide sufficient hands-on learning experience related to the design, development and analysis of suitable product / process so as to enhance the technical skill sets in the chosen field.									
Expected Course Outcome:									
At the end of the course the student will be able to									
<ol style="list-style-type: none"> 1. Formulate specific problem statements for ill-defined real life problems with reasonable assumptions and constraints. 2. Perform literature search and /or patent search in the area of interest. 3. Conduct experiments / Design and Analysis / solution iterations and document the results. 4. Perform error analysis / benchmarking / costing 5. Synthesise the results and arrive at scientific conclusions / products / solution 6. Document the results in the form of technical report / presentation 									
Contents									
<ol style="list-style-type: none"> 1. Capstone Project may be a theoretical analysis, modeling & simulation, experimentation & analysis, prototype design, fabrication of new equipment, correlation and analysis of data, software development, applied research and any other related activities. 2. Project can be for one or two semesters based on the completion of required number of credits as per the academic regulations. 3. Can be individual work or a group project, with a maximum of 3 students. 4. In case of group projects, the individual project report of each student should specify the individual's contribution to the group project. 5. Carried out inside or outside the university, in any relevant industry or research institution. 6. Publications in the peer reviewed journals / International Conferences will be an added advantage 									
Mode of Evaluation: Periodic reviews, Presentation, Final oral viva, Poster submission									
Recommended by Board of Studies					10.06.2015				
Approved by Academic Council					37 th AC		Date		16.06.2015

Course Code	Course Title	L	T	P	J	C
ENG1901	Technical English - I	0	0	4	0	2
Pre-requisite	Foundation English-II	Syllabus Version				
						1
Course Objectives:						
<ol style="list-style-type: none"> 1. To enhance students' knowledge of grammar and vocabulary to read and write error-free language in real life situations. 2. To make the students' practice the most common areas of written and spoken communications skills. 3. To improve students' communicative competency through listening and speaking activities in the classroom. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Develop a better understanding of advanced grammar rules and write grammatically correct sentences. 2. Acquire wide vocabulary and learn strategies for error-free communication. 3. Comprehend language and improve speaking skills in academic and social contexts. 4. Improve listening skills so as to understand complex business communication in a variety of global English accents through proper pronunciation. 5. Interpret texts, diagrams and improve both reading and writing skills which would help them in their academic as well as professional career. 						
Module:1	Advanced Grammar					4 hours
Articles, Tenses, Voice and Prepositions Activity: Worksheets on Impersonal Passive Voice, Exercises from the prescribed text						
Module:2	Vocabulary Building I					4 hours
Idioms and Phrases, Homonyms, Homophones and Homographs Activity: Jigsaw Puzzles; Vocabulary Activities through Web tools						
Module:3	Listening for Specific Purposes					4 hours
Gist, monologues, short conversations, announcements, briefings and discussions Activity: Gap filling; Interpretations						
Module:4	Speaking for Expression					6 hours
Introducing oneself and others, Making Requests & responses, Inviting and Accepting/Declining Invitations Activity: Brief introductions; Role-Play; Skit.						
Module:5	Reading for Information					4 hours
Reading Short Passages, News Articles, Technical Papers and Short Stories Activity: Reading specific news paper articles; blogs						

Module:6	Writing Strategies	4 hours
Joining the sentences, word order, sequencing the ideas, introduction and conclusion Activity: Short Paragraphs; Describing familiar events; story writing		
Module:7	Vocabulary Building II	4 hours
Enrich the domain specific vocabulary by describing Objects, Charts, Food, Sports and Employment. Activity: Describing Objects, Charts, Food, Sports and Employment		
Module:8	Listening for Daily Life	4 hours
Listening for statistical information, Short extracts, Radio broadcasts and TV interviews Activity: Taking notes and Summarizing		
Module:9	Expressing Ideas and Opinions	6 hours
Telephonic conversations, Interpretation of Visuals and describing products and processes. Activity: Role-Play (Telephonic); Describing Products and Processes		
Module: 10	Comprehensive Reading	4 hours
Reading Comprehension, Making inferences, Reading Graphics, Note-making, and Critical Reading. Activity: Sentence Completion; Cloze Tests		
Module: 11	Narration	4 hours
Writing narrative short story, Personal milestones, official letters and E-mails. Activity: Writing an E-mail; Improving vocabulary and writing skills.		
Module:12	Pronunciation	4 hours
Speech Sounds, Word Stress, Intonation, Various accents Activity: Practicing Pronunciation through web tools; Listening to various accents of English		
Module:13	Editing	4 hours
Simple, Complex & Compound Sentences, Direct & Indirect Speech, Correction of Errors, Punctuations. Activity: Practicing Grammar		
Module:14	Short Story Analysis	4 hours
“The Boundary” by Jhumpa Lahiri Activity: Reading and analyzing the theme of the short story.		
Total Lecture hours		60 hours

Mode of evaluation: Quizzes, Presentation, Discussion, Role play, Assignments and FAT		
List of Challenging Experiments (Indicative)		
1.	Self-Introduction	12 hours
2.	Sequencing Ideas and Writing a Paragraph	12 hours
3.	Reading and Analyzing Technical Articles	8 hours
4.	Listening for Specificity in Interviews (Content Specific)	12 hours
5.	Identifying Errors in a Sentence or Paragraph	8 hours
6.	Writing an E-mail by narrating life events	8 hours
Total Laboratory Hours		60 hours
Mode of evaluation: Quizzes, Presentation, Discussion, Role play, Assignments and FAT		
Recommended by Board of Studies	08.06.2019	
Approved by Academic Council	55	Date: 13-06-2019

Course Code	Course Title	L	T	P	J	C
ENG 1902	Technical English - II	0	0	4	0	2
Pre-requisite	71% to 90% EPT score	Syllabus Version				
		1				
Course Objectives:						
<ol style="list-style-type: none"> 1. To acquire proficiency levels in LSRW skills on par with the requirements for placement interviews of high-end companies / competitive exams. 2. To evaluate complex arguments and to articulate their own positions on a range of technical and general topics. 3. To speak in grammatical and acceptable English with minimal MTI, as well as develop a vast and active vocabulary. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Communicate proficiently in high-end interviews and exam situations and all social situations 2. Comprehend academic articles and draw inferences 3. Evaluate different perspectives on a topic 4. Write clearly and convincingly in academic as well as general contexts 5. Synthesize complex concepts and present them in speech and writing 						
Module:1	Listening for Clear Pronunciation					4 hours
Ice-breaking, Introduction to vowels, consonants, diphthongs. Listening to formal conversations in British and American accents (BBC and CNN) as well as other 'native' accents Activity: Factual and interpretive exercises; note-making in a variety of global English accents						
Module:2	Introducing Oneself					4 hours
Speaking: Individual Presentations Activity: Self-Introductions, Extempore speech						
Module:3	Effective Writing					6 hours
Writing: Business letters and Emails, Minutes and Memos Structure/ template of common business letters and emails: inquiry/ complaint/ placing an order; Formats of Minutes and Memos Activity: Students write a business letter and Minutes/ Memo						
Module:4	Comprehensive Reading					4 hours
Reading: Reading Comprehension Passages, Sentence Completion (Technical and General Interest), Vocabulary and Word Analogy Activities: Cloze tests, Logical reasoning, Advanced grammar exercises						
Module:5	Listening to Narratives					4 hours
Listening: Listening to audio files of short stories, News, TV Clips/ Documentaries, Motivational Speeches in UK/ US/ global English accents. Activity: Note-making and Interpretive exercises						

Module:6	Academic Writing and Editing	6 hours
Writing: Editing/ Proofreading symbols Citation Formats Structure of an Abstract and Research Paper Activity: Writing Abstracts and research paper; Work with Editing/ Proofreading exercise		
Module:7	Team Communication	4 hours
Speaking: Group Discussions and Debates on complex/ contemporary topics Discussion evaluation parameters, using logic in debates Activity: Group Discussions on general topics		
Module:8	Career-oriented Writing	4 hours
Writing: Resumes and Job Application Letters, SOP Activity: Writing resumes and SOPs		
Module:9	Reading for Pleasure	4 hours
Reading: Reading short stories Activity: Classroom discussion and note-making, critical appreciation of the short story		
Module: 10	Creative Writing	4 hours
Writing: Imaginative, narrative and descriptive prose Activity: Writing about personal experiences, unforgettable incidents, travelogues		
Module: 11	Academic Listening	4 hours
Listening: Listening in academic contexts Activity: Listening to lectures, Academic Discussions, Debates, Review Presentations, Research Talks, Project Review Meetings		
Module:12	Reading Nature-based Narratives	4 hours
Narratives on Climate Change, Nature and Environment Activity: Classroom discussions, student presentations		
Module:13	Technical Proposals	4 hours
Writing: Technical Proposals Activities: Writing a technical proposal		
Module:14	Presentation Skills	4 hours
Persuasive and Content-Specific Presentations Activity: Technical Presentations		
Total Lecture hours:		60 hours

Mode of evaluation: Quizzes, Presentation, Discussion, Role play, Assignments and FAT		
List of Challenging Experiments (Indicative)		
1.	Self-Introduction using SWOT	12 hours
2.	Writing minutes of meetings	10 hours
3.	Writing an abstract	10 hours
4.	Listening to motivational speeches and interpretation	10 hours
5.	Cloze Test	6 hours
6.	Writing a proposal	12 hours
Total Laboratory Hours		60 hours
Mode of evaluation: Quizzes, Presentation, Discussion, Role play, Assignments and FAT		
Recommended by Board of Studies	08.06.2019	
Approved by Academic Council	55	Date: 13-06-2019

Course Code	Course title	L	T	P	J	C
ENG1903	Advanced Technical English	0	0	2	4	2
Pre-requisite	Greater than 90 % EPT score	Syllabus Version				
		1				
Course Objectives:						
<ol style="list-style-type: none"> 1. To review literature in any form or any technical article 2. To infer content in social media and respond accordingly 3. To communicate with people across the globe overcoming trans-cultural barriers and negotiate successfully 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Analyze critically and write good reviews 2. Articulate research papers, project proposals and reports 3. Communicate effectively in a trans-cultural environment 4. Negotiate and lead teams towards success 5. Present ideas in an effective manner using web tools 						
Module:1	Negotiation and Decision Making Skills through Literary Analysis					5 hours
Concepts of Negotiation and Decision Making Skills Activity: Analysis of excerpts from Shakespeare’s “The Merchant of Venice” (court scene) and discussion on negotiation skills. Critical evaluation of excerpts from Shakespeare’s “Hamlet”(Monologue by Hamlet) and discussion on decision making skills						
Module:2	Writing reviews and abstracts through movie interpretations					5 hours
Review writing and abstract writing with competency Activity: Watching Charles Dickens “Great Expectations” and writing a movie review Watching William F. Nolan’s “Logan’s Run” and analyzing it in tune with the present scenario of depletion of resources and writing an abstract						
Module:3	Technical Writing					4 hours
Stimulate effective linguistics for writing: content and style Activity: Proofreading Statement of Purpose						
Module:4	Trans-Cultural Communication					4 hours
Nuances of Trans-cultural communication Activity: Group discussion and case studies on trans-cultural communication. Debate on trans-cultural communication.						

Module:5	Report Writing and Content Writing	4 hours
Enhancing reportage on relevant audio-visuals Activity: Watch a documentary on social issues and draft a report Identify a video on any social issue and interpret		
Module:6	Drafting project proposals and article writing	4 hours
Dynamics of drafting project proposals and research articles Activity: Writing a project proposal. Writing a research article.		
Module:7	Technical Presentations	4 hours
Build smart presentation skills and strategies Activity: Technical presentations using PPT and Web tools		
Total Lecture hours		30 hours

Course code	Course title	L	T	P	J	C
PHY1901	Introduction to Innovative Projects	1	0	0	0	1
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
This course is offered to the students in the 1 st Year of B.Tech. in order to orient them towards independent, systemic thinking and be innovative.						
<ol style="list-style-type: none"> 1. To make students confident enough to handle the day to day issues. 2. To develop the “Thinking Skill” of the students, especially Creative Thinking Skills 3. To train the students to be innovative in all their activities 4. To prepare a project report on a socially relevant theme as a solution to the existing issues 						
Expected Course Outcome: Students will be able to						
<ol style="list-style-type: none"> 1. Understand the various types of thinking skills. 2. Enhance the innovative and creative ideas. 3. Find out a suitable solution for socially relevant issues- J component 						
Module:1 A	Self Confidence	1 hour				
Understanding self – Johari Window –SWOT Analysis – Self Esteem – Being a contributor – Case Study						
Project : Exploring self, understanding surrounding, thinking about how s(he) can be a contributor for the society, Creating a big picture of being an innovator – writing a 1000 words imaginary autobiography of self – Topic “Mr X – the great innovator of 2015” and upload. (4 non- contact hours)						
Module:1 B	Thinking Skill	1 hour				
Thinking and Behaviour – Types of thinking– Concrete – Abstract, Convergent, Divergent, Creative, Analytical, Sequential and Holistic thinking – Chunking Triangle – Context Grid – Examples – Case Study.						
Project : Meeting at least 50 people belonging to various strata of life and talk to them / make field visits to identify a min of 100 society related issues, problems for which they need solutions and categories them and upload along with details of people met and lessons learnt. (4 non- contact hours)						
Module:1 C	Lateral Thinking Skill	1 hour				

Blooms Taxonomy – HOTS – Outof the box thinking – deBono lateral thinking model – Examples Project : Last weeks - incomplete portion to be done and uploaded		
Module:2 A	Creativity	1 hour
Creativity Models – Walla – Barrons – Koberg & Begnall – Examples Project : Selecting 5 out of 100 issues identified for future work. Criteria based approach for prioritisation, use of statistical tools & upload . (4 non- contact hours)		
Module:2 B	Brainstorming	1 hour
25 brainstorming techniques and examples Project : Brainstorm and come out with as many solutions as possible for the top 5 issues identified & upload . (4 non- contact hours)		
Module:3	Mind Mapping	1 hour
Mind Mapping techniques and guidelines. Drawing a mind map Project : Using Mind Maps get another set of solutions forthe next 5 issues (issue 6 – 10) . (4 non- contact hours)		
Module:4 A	Systems thinking	1 hour
Systems Thinking essentials – examples – Counter Intuitive condemns Project : Select 1 issue / problem for which the possible solutions are available with you. Apply Systems Thinking process and pick up one solution [explanation should be given why the other possible solutions have been left out]. Go back to the customer and assess the acceptability and upload. . (4 non- contact hours)		
Module:4 B	Design Thinking	1 hour
Design thinking process – Human element of design thinking – case study Project : Apply design thinking to the selected solution, apply the engineering & scientific tinge to it. Participate in “design week” celebrations upload the weeks learning out come.		
Module:5 A	Innovation	1 hour
Difference between Creativity and Innovation – Examples of innovation –Being innovative. Project: A literature searches on prototyping of your solution finalized. Prepare a prototype model or process and upload. . (4 non- contact hours)		
Module:5 B	Blocks for Innovation	1 hour
Identify Blocks for creativity and innovation – overcoming obstacles – Case Study Project : Project presentation on problem identification, solution, innovations-expected results – Interim review with PPT presentation. . (4 non- contact hours)		
Module:5 C	Innovation Process	1 hour
Steps for Innovation – right climate for innovation Project: Refining the project, based on the review report and uploading the text. . (4 non- contact hours)		
Module:6 A	Innovation in India	1 hour
Stories of 10 Indian innovations Project: Making the project better with add ons. . (4 non- contact hours)		
Module:6 B	JUGAAD Innovation	1 hour
Frugal and flexible approach to innovation - doing more with less Indian Examples Project: Fine tuning the innovation project with JUGAAD principles and uploading (Credit for JUGAAD implementation) . (4 non- contact hours)		
Module:7 A	Innovation Project Proposal Presentation	1 hour
Project proposal contents, economic input, ROI – Template Project: Presentation of the innovative project proposal and upload . (4 non- contact hours)		
Module:8 A	Contemporary issue in Innovation	1 hour

Contemporary issue in Innovation			
Project: Final project Presentation , Viva voce Exam (4 non- contact hours)			
	Total Lecture hours:	15 hours	
Text Book(s)			
1.	How to have Creative Ideas, Edward deBono, Vermilion publication, UK, 2007		
2.	The Art of Innovation, Tom Kelley & Jonathan Littman, Profile Books Ltd, UK, 2008

4.	JUGAAD Innovation, Navi Radjou, Jaideep Prabhu, Simone Ahuja Random house India, Noida, 2012.		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
Three reviews with weightage of 25 : 25 : 50 along with reports			
Recommended by Board of Studies	15-12-2015		
Approved by Academic Council	No. 39	Date	17-12-2015

HUM1021	ETHICS AND VALUES				L	T	P	J	C
					2	0	0	0	2
Pre-requisite	Nil				Syllabus version				
					1.1				
Course Objectives:									
1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity 2. To understand the negative health impacts of certain unhealthy behaviors 3. To appreciate the need and importance of physical, emotional health and social health									
Expected Course Outcome:									
Students will be able to:									
1. Follow sound morals and ethical values scrupulously to prove as good citizens 2. Understand various social problems and learn to act ethically 3. Understand the concept of addiction and how it will affect the physical and mental health 4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects 5. Identify the main typologies, characteristics, activities, actors and forms of cybercrime									
Module:1	Being Good and Responsible				5 hours				
Gandhian values such as truth and non-violence – Comparative analysis on leaders of past and present – Society’s interests versus self-interests - Personal Social Responsibility: Helping the needy, charity and serving the society									
Module:2	Social Issues 1				4 hours				
Harassment – Types - Prevention of harassment, Violence and Terrorism									
Module:3	Social Issues 2				4 hours				
Corruption: Ethical values, causes, impact, laws, prevention – Electoral malpractices; White collar crimes - Tax evasions – Unfair trade practices									
Module:4	Addiction and Health				5 hours				
Peer pressure - Alcoholism: Ethical values, causes, impact, laws, prevention – Ill effects of smoking - Prevention of Suicides; Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases									
Module:5	Drug Abuse				3 hours				
Abuse of different types of legal and illegal drugs: Ethical values, causes, impact, laws and prevention									
Module:6	Personal and Professional Ethics				4 hours				
Dishonesty - Stealing - Malpractices in Examinations – Plagiarism									
Module:7	Abuse of Technologies				3 hours				
Hacking and other cyber crimes, Addiction to mobile phone usage, Video games and Social networking websites									
Module:8	Contemporary issues:				2 hours				
Guest lectures by Experts									

	Total Lecture hours:		30 hours	
Reference Books

MAT1011	Calculus for Engineers	L	T	P	J	C
		3	0	2	0	4
Pre-requisite	10+2 Mathematics	Syllabus Version				
		1.0				
Course Objectives :						
<ol style="list-style-type: none"> To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc. To impart the knowledge of Laplace transform, an important transform technique for Engineers which requires knowledge of integration 						
Expected Course Outcomes:						
At the end of this course the students should be able to						
<ol style="list-style-type: none"> apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates. understand gradient, directional derivatives, divergence, curl and Greens", Stokes, Gauss theorems demonstrate MATLAB code for challenging problems in engineering 						
Module:1	Application of Single Variable Calculus	9 hours				
Differentiation- Extrema on an Interval-Rolle's Theorem and the Mean Value Theorem- Increasing and Decreasing functions and First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution - Beta and Gamma functions-interrelation						
Module:2	Laplace transforms	7 hours				
Definition of Laplace transform-Properties-Laplace transform of periodic functions-Laplace transform of unit step function, Impulse function-Inverse Laplace transform-Convolution.						
Module:3	Multivariable Calculus	4 hours				
Functions of two variables-limits and continuity-partial derivatives -total differential-Jacobian and its properties.						
Module:4	Application of Multivariable Calculus	5 hours				
Taylor's expansion for two variables-maxima and minima-constrained maxima and minima-Lagrange's multiplier method.						
Module:5	Multiple integrals	8 hours				
Evaluation of double integrals-change of order of integration-change of variables between Cartesian and polar co-ordinates - Evaluation of triple integrals-change of variables between Cartesian and cylindrical and spherical co-ordinates- evaluation of multiple integrals using gamma and beta functions.						

Module:6	Vector Differentiation	5 hours	
Scalar and vector valued functions – gradient, tangent plane–directional derivative-divergence and curl–scalar and vector potentials–Statement of vector identities-Simple problems			
Module:7	Vector Integration	5 hours	
line, surface and volume integrals - Statement of Green"s, Stoke"s and Gauss divergence theorems -verification and evaluation of vector integrals using them.			
Module:8	Contemporary Issues:	2 hours	
Industry Expert Lecture			
		Total Lecture hours:	45 hours
Text Book(s)

Approved by Academic Council	No. 37	Date	16-06-2015

MAT2001	Statistics for Engineers	L	T	P	J	C
		3	0	2	0	4
Prerequisites	MAT1011 – Calculus for Engineers	Syllabus Version:				1.0
Course Objectives :						
<ol style="list-style-type: none"> 1. To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations. 2. To analyse distributions and relationship of real-time data. 3. To apply estimation and testing methods to make inference and modelling techniques for decision making. 						
Expected Course Outcome:						
At the end of the course the student should be able to:						
<ol style="list-style-type: none"> 1. Compute and interpret descriptive statistics using numerical and graphical techniques. 2. Understand the basic concepts of random variables and find an appropriate distribution for analysing data specific to an experiment. 3. Apply statistical methods like correlation, regression analysis in analysing, interpreting experimental data. 4. Make appropriate decisions using statistical inference that is the central to experimental research. 5. Use statistical methodology and tools in reliability engineering problems. 6. demonstrate R programming for statistical data 						
Module: 1	Introduction to Statistics	6 hours				
Introduction to statistics and data analysis-Measures of central tendency –Measures of variability-[Moments-Skewness-Kurtosis (Concepts only)].						
Module: 2	Random variables	8 hours				
Introduction -random variables-Probability mass Function, distribution and density functions - joint Probability distribution and joint density functions- Marginal, conditional distribution and density functions- Mathematical expectation, and its properties Covariance , moment generating function – characteristic function.						
Module: 3	Correlation and regression	4 hours				
Correlation and Regression – Rank Correlation- Partial and Multiple correlation- Multiple regression.						
Module: 4	Probability Distributions	7 hours				
Binomial and Poisson distributions – Normal distribution – Gamma distribution – Exponential distribution – Weibull distribution.						
Module: 5	Hypothesis Testing I	4 hours				
Testing of hypothesis – Introduction-Types of errors, critical region, procedure of testing hypothesis-Large sample tests- Z test for Single Proportion, Difference of Proportion, mean and difference of means.						
Module: 6	Hypothesis Testing II	9 hours				
Small sample tests- Student's t-test, F-test- chi-square test- goodness of fit - independence of attributes- Design of Experiments - Analysis of variance – one and two way classifications - CRD-RBD- LSD.						
Module: 7	Reliability	5 hours				
Basic concepts- Hazard function-Reliabilities of series and parallel systems- System Reliability - Maintainability-Preventive and repair maintenance- Availability.						

Module: 8	Contemporary Issues	2 hours
Industry Expert Lecture		
	Total Lecture hours	45 hours

MGT1022	Lean Start up Management		L	T	P	J	C
			1	0	0	4	2
Pre-requisite	Nil	Syllabus version					
		v.1.0					
Course Objectives: To develop the ability to							
<ol style="list-style-type: none"> 1. Learn methods of company formation and management. 2. Gain practical skills in and experience of stating of business using pre-set collection of business ideas. 3. Learn basics of entrepreneurial skills. 							
Expected Course Outcome: On the completion of this course the student will be able to:							
<ol style="list-style-type: none"> 1. Understand developing business models and growth drivers 2. Use the business model canvas to map out key components of enterprise 3. Analyze market size, cost structure, revenue streams, and value chain 4. Understand build-measure-learn principles <p>Foreseeing and quantifying business and financial risks</p>							
Module:1		2 Hours					
Creativity and Design Thinking (identify the vertical for business opportunity, understand your customers, accurately assess market opportunity)							
Module:2		3 Hours					
Minimum Viable Product (Value Proposition, Customer Segments, Build- measure-learn process)							
Module:3		3 Hours					
Business Model Development(Channels and Partners, Revenue Model and streams, Key Resources, Activities and Costs, Customer Relationships and Customer Development Processes, Business model canvas –the lean model- templates)							
Module:4		3 Hours					
Business Plan and Access to Funding(visioning your venture, taking the product/ service to market, Market plan including Digital & Viral Marketing, start-up finance - Costs/Profits & Losses/cash flow, Angel/VC,/Bank Loans and Key elements of raising money)							
Module:5		3 Hours					
Legal, Regulatory, CSR, Standards, Taxes							
Module:6		2 Hours					
Lectures by Entrepreneurs							
		Total Lecture	15 hours				
Text Book(s)							
1.	The Startup Owner's Manual: The Step-By-Step Guide for Building a Great Company, Steve Blank, K & S Ranch; 1 st edition (March 1, 2012)						
2	The Four Steps to the Epiphany, Steve Blank, K&S Ranch; 2 nd edition (July 17, 2013)						
3	The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses, Eric Ries, Crown Business; (13 September 2011)						

Reference Books

Mode of Evaluation: Assignments; Field Trips, Case Studies; e-learning; Learning through research, TED Talks			
Project			
1.	Project		60 hours
Total Project			60 hours
Recommended by Board of Studies	08-06-2015		
Approved by Academic Council	37	Date	16-06-2015
Total Practical Hours			60 hours
Mode of evaluation: Mini Project, Flipped Class Room, Lecture, PPT's, Role play, Assignments Class/Virtual Presentations, Report and beyond the classroom activities			
Recommended by Board of Studies	22-07-2017		
Approved by Academic Council	No. 47	Date	24.08.2017

PHY1701	Engineering Physics		L	T	P	J	C
			3	0	2	0	4
Pre-requisite	None		Syllabus version				
			V.2.1				
Course Objectives:							
To enable the students to understand the basics of the latest advancements in Physics viz., Quantum Mechanics, Nanotechnology, Lasers, Electro Magnetic Theory and Fiber Optics.							
Expected Course Outcome: Students will be able to							
<ol style="list-style-type: none"> 1. Comprehend the dual nature of radiation and matter. 2. Compute Schrodinger's equations to solve finite and infinite potential problems. 3. Analyze quantum ideas at the nanoscale. 4. Apply quantum ideas for understanding the operation and working principle of optoelectronic devices. 5. Recall the Maxwell's equations in differential and integral form. 6. Design the various types of optical fibers for different Engineering applications. 7. Explain concept of Lorentz Transformation for Engineering applications. 8. Demonstrate the quantum mechanical ideas 							
Module:1	Introduction to Modern Physics		6 hours				
Planck's concept (hypothesis), Compton Effect, Particle properties of wave: Matter Waves, Davisson Germer Experiment, Heisenberg Uncertainty Principle, Wave function, and Schrodinger equation (time dependent & independent).							
Module:2	Applications of Quantum Physics		5 hours				
Particle in a 1-D box (Eigen Value and Eigen Function), 3-D Analysis (Qualitative), Tunneling Effect (Qualitative) (AB 205), Scanning Tunneling Microscope (STM).							
Module:3	Nanophysics		5 hours				
Introduction to Nano-materials, Moore's law, Properties of Nano-materials, Quantum confinement, Quantum well, wire & dot, Carbon Nano-tubes (CNT), Applications of nanotechnology in industry.							
Module:4	Laser Principles and Engineering Application		6 hours				
Laser Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Population inversion, Two, three & four level systems, Pumping schemes, Threshold gain coefficient, Components of laser, Nd-YAG, He-Ne, CO ₂ and Dye laser and their engineering applications.							
Module:5	Electromagnetic Theory and its application		6 hours				
Physics of Divergence, Gradient and Curl, Qualitative understanding of surface and volume integral, Maxwell Equations (Qualitative), Wave Equation (Derivation), EM Waves, Phase velocity, Group velocity, Group index, Wave guide (Qualitative)							
Module:6	Propagation of EM waves in Optical fibers and Optoelectronic Devices		10 hours				
Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers - step index, graded index, single mode & multimode, Attenuation, Dispersion-intermodal and intramodal. Sources-LED & Laser Diode, Detectors-Photodetectors- PN & PIN - Applications of fiber optics in communication- Endoscopy.							
Module:7	Special Theory of Relativity		5 hours				
Frame of reference, Galilean relativity, Postulate of special theory of relativity, Simultaneity, length contraction and time dilation.							
Module:8	Contemporary issues:		2 hours				

Lecture by Industry Experts			
		Total Lecture hours:	45 hours
Text Book(s)			
1.	Arthur Beiser et al., Concepts of Modern Physics, 2013, Sixth Edition, Tata McGraw Hill.		
2.	William Silfvast, Laser Fundamentals, 2008, Cambridge University Press.		
3.	D. J. Griffith, Introduction to Electrodynamics, 2014, 4th Edition, Pearson.		
4.	Djafar K. Mynbaev and Lowell L. Scheiner, Fiber Optic Communication Technology, 2011, Pearson		
Reference Books			
1.	Raymond A. Serway, Clement J. Mosses, Curt A. Moyer Modern Physics, 2010, 3rd Indian Edition Cengage learning.		
2.	John R. Taylor, Chris D. Zafiratos and Michael A. Dubson, Modern Physics for Scientists and Engineers, 2011, PHI Learning Private Ltd.		
3.	Kenneth Krane Modern Physics, 2010, Wiley Indian Edition.		
4.	Nityanand Choudhary and Richa Verma, Laser Systems and Applications, 2011, PHI Learning Private Ltd.		
5.	S. Nagabhushana and B. Sathyanarayana, Lasers and Optical Instrumentation, 2010, I.K. International Publishing House Pvt. Ltd.,		
6.	R. Shevgaonkar, Electromagnetic Waves, 2005, 1st Edition, Tata McGraw Hill		
7.	Principles of Electromagnetics, Matthew N.O. Sadiku, 2010, Fourth Edition, Oxford.		
8.	Ajoy Ghatak and K. Thyagarajan, Introduction to Fiber Optics, 2010, Cambridge University Press.		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Experiments			
1.	Determination of Planck's constant using electroluminescence process		2 hrs
2.	Electron diffraction		2 hrs
3.	Determination of wavelength of laser source (He -Ne laser and diode lasers of different wavelengths) using diffraction technique		2 hrs
4.	Determination of size of fine particle using laser diffraction		2 hrs
5.	Determination of the track width (periodicity) in a written CD		2 hrs
6.	Optical Fiber communication (source + optical fiber + detector)		2 hrs
7.	Analysis of crystallite size and strain in a nano -crystalline film using X-ray diffraction		2 hrs
8.	Numerical solutions of Schrödinger equation (e.g. particle in a box problem) (can be given as an assignment)		2 hrs
9.	Laser coherence length measurement		2 hrs
10.	Proof for transverse nature of E.M. waves		2 hrs
11.	Quantum confinement and Heisenberg's uncertainty principle		2 hrs
12.	Determination of angle of prism and refractive index for various colour – Spectrometer		2 hrs
13.	Determination of divergence of a laser beam		2 hrs
14.	Determination of crystalline size for nanomaterial (Computer simulation)		2 hrs
15.	Demonstration of phase velocity and group velocity (Computer simulation)		2 hrs
Total Laboratory Hours			30 hrs
Mode of evaluation: CAT / FAT

Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
<p>The course gives students the necessary background to:</p> <ol style="list-style-type: none"> 1. Demonstrate Proficiency in reading, writing, and speaking in basic Spanish. Learning vocabulary related to profession, education centres, day today activities, food, culture, sports and hobby, family set up, workplace, market and classroom activities is essential. 2. Demonstrate the ability to describe things and will be able to translate into English and vice versa. 3. Describe in simple terms (both in written and oral form) aspects of their background, immediate environment and matters in areas of immediate need. 						
Expected Course Outcome:						
<p>The students will be able to</p> <ol style="list-style-type: none"> 1. Remember greetings, giving personal details and Identify genders by using correct articles 2. Apply the correct use of SER, ESTAR and TENER verb for describing people, place and things 3. Create opinion about time and weather conditions by knowing months, days and seasons in Spanish 4. Create opinion about people and places by using regular verbs 5. Apply reflexive verbs for writing about daily routine and create small paragraphs about hometown, best friend and family 						
Module: 1	Abecedario, Saludos y Datos personales: Origen, Nacionalidad, Profesión					3 hours
Competencia Gramática: Vocales y Consonantes. Artículos definidos e indefinidos (Numero y Genero).						
Competencia Escrita: Saludos y Datos personales						
Module: 2	Edad y posesión. Números (1-20)					3 hours
Competencia Gramática: Pronombres personales. Adjetivos. Los verbos SER y TENER.						
Competencia Escrita: Escribe sobre mismo/a y los compañeros de la clase						
Module: 3	Vocabulario de Mi habitación. Colores. Descripción de lugares y cosas					5 hours
Competencia Gramática: Adjetivos posesivos. El uso del verbo ESTAR. Diferencia entre SER y ESTAR.						
Competencia Escrita: Mi habitación						
Module: 4	Mi familia. Números (21-100). Direcciones. Expresar la hora. Los meses del año.					5 hours
Competencia Gramática: Frases preposicionales. Uso del HAY. La diferencia entre MUY y MUCHO. Uso del verbo GUSTAR						
Competencia Escrita: Mi familia. Dar opiniones sobre tiempo						
Module: 5	Expresar fechas y el tiempo. Dar opiniones sobre personas y lugares.					5 hours
Competencia Gramática: Los verbos regulares (-AR, -ER, -IR) en el presente. Adjetivos demostrativos.						
Competencia Escrita: Mi mejor amigo/a. Expresar fechas. Traducción inglés a español y Español a						

Ingles.			
Module: 6	Describir el diario. Las actividades cotidianas.		3 hours
Competencia Gramática: Los Verbos y pronombres reflexivos. Los verbos pronominales con e/ie, o/ue, e/i, u/ue. Competencia Escrita: El horario. Traducción ingles a español y Español a Ingles.			
Module: 7	Dar opiniones sobre comidas y bebidas. Decir lo que está haciendo. Describir mi ciudad y Ubicar los sitios en la ciudad.		4 hours
Competencia Gramática: Los verbos irregulares. Estar + gerundio. Poder + Infinitivo. Competencia Escrita: Conversación en un restaurante. Traducción ingles a español y Español a Ingles. Mi ciudad natal. Mi Universidad. La clase. Mi fiesta favorita.			
Module: 8	Guest Lectures / Native Speakers		2 hours
Total Lecture hours			30 hours
Text Book(s)			
1.	Text Book: “Aula Internacional 1”, Jaime Corpas, Eva Garcia, Agustin Garmendia, Carmen Soriano Goyal Publication; reprinted Edition, (2010)		
Reference Books			
1.	“¡Acción Gramática!” Phil Turk and Mike Zollo, Hodder Murray, London 2006. “Practice makes perfect: Spanish Vocabulary”, Dorothy Richmond, McGraw Hill Contemporary, USA, 2012.		
2.	“Practice makes perfect: Basic Spanish”, Dorothy Richmond, McGraw Hill Contemporary, USA 2009.		
3.	“Pasaporte A1 Foundation”, Matilde Cerrolaza Aragón, Óscar Cerrolaza Gili, Begoña Llovet Barquero, Edelsa Grupo, España, 2010.

Pre-requisite					Syllabus version				
					1.0				
Course Objectives:									
The course gives students the necessary background to:									
<ol style="list-style-type: none"> enable students to read, listen and communicate in Spanish in their day to day life. enable students to describe situations by using present, past and future tenses in Spanish. enable to develop the comprehension skill in Spanish language. 									
Expected Course Outcome:									
The students will be able to									
<ol style="list-style-type: none"> create sentences in near future and future tenses and correctly using the prepositions like POR and PARA create sentences in preterito perfecto and correctly use the direct and indirect object pronouns create sentences related to likes and dislikes and also give commands in formal and informal way create sentences in past tense by using imperfecto and indefinido forms and describe past events create conversations in Spanish at places like restaurants, hotels, Shops and Railway stations understand about different Spanish speaking countries and its culture and traditions. 									
Module:1	Números (101 – 1 millón). Expresar los planes futuros. Los números ordinales.				7 hours				
Competencia Gramática: Futuros cercanos (Ir+a+Infinitivo). Futuros (Verbos regulares e irregulares). Uso del POR y PARA. Competencia Escrita: Traducción ingles a español y español a Ingles. Comprensión - Los textos y Videos									
Module:2	Las ropas, colores y tamaños. Costar, valer, descuentos y rebajas				8 hours				
Competencia Gramática: Pronombres objetivos directos e indirectos. El verbo Gustar y Disgustar. Competencia Escrita: Traducción ingles a español y español a Ingles. Comprensión - Los textos y Videos									
Module:3	Escribir un Correo electrónico formal e informal.				7 hours				
Competencia Gramática: Imperativos formales e informales. Pretérito perfecto. Competencia Escrita: Traducción ingles a español y español a Ingles. Comprensión - Los textos y Videos									

Module:4	Currículo Vitae. Presentarse en una entrevista informal.	6 hours
Competencia Gramática: Pretérito imperfecto. Pretérito indefinido. Competencia Escrita: Traducción ingles a español y español a Ingles. Comprensión - Los textos y Videos		
Module:5	Introducción personal, Expresar los planes futuros.	5 hours
Comprensión oral: Introducción personal, Expresar los planes futuros. ¿Qué vas a hacer en las próximas vacaciones? Comprensión auditiva: Las preguntas sobre un cuento auditivo. Relacionar el audio con las imágenes. Las preguntas basadas en canciones. Medio de transporte: Comprar y Reservar billetes.		
Module:6	Diálogos entre dos	5 hours
Comprensión oral: Diálogos entre dos (cliente y tendero de ropas, pasajero y empleado, en un restaurante, Reservación de habitación en un hotel). Presentación en una entrevista. Comprensión auditiva: Las preguntas basadas en canciones. Las preguntas basadas en diálogos.		
Module:7	Presentación de los países hispánicos.	5 hours
Comprensión oral: Dialogo entre un médico y paciente. Presentación de los países hispánicos. Describir su infancia. Describir vacaciones últimas o las actividades de último fin de semana. Comprensión auditiva: Rellenar los blancos del cuento en pasado. Las preguntas basadas en el cuento. Las preguntas basadas en un anuncio		
Module:8	Guest Lectures/ Native Speakers	2 hours
Total Lecture hours: 45 hours

		1.0				
Course Objectives:						
The course gives students the necessary background to:						
<ol style="list-style-type: none"> 1. Learn the basics of French language and to communicate effectively in French in their day to day life. 2. Achieve functional proficiency in listening, speaking, reading and writing 3. Recognize culture-specific perspectives and values embedded in French language. 						
Expected Course Outcome:						
The students will be able to :						
<ol style="list-style-type: none"> 1. Identify in French language the daily life communicative situations via personal pronouns, emphatic pronouns, salutations, negations and interrogations. 2. Communicate effectively in French language via regular / irregular verbs. 3. Demonstrate comprehension of the spoken / written language in translating simple sentences. 4. Understand and demonstrate the comprehension of some particular new range of unseen written materials 5. Demonstrate a clear understanding of the French culture through the language studied 						
Module: 1	Expressions simples					3 hours
Les Salutations, Les nombres (1-100), Les jours de la semaine, Les mois de l'année, Les Pronoms Sujets, Les Pronoms Toniques, La conjugaison des verbes irréguliers- avoir / être / aller / venir / faire etc.						
Savoir-faire pour: Saluer, Se présenter, Présenter quelqu'un, Etablir des contacts						
Module: 2	La conjugaison des verbes réguliers					3 hours
La conjugaison des verbes réguliers, La conjugaison des verbes pronominaux, La Négation, L'interrogation avec 'Est-ce que ou sans Est-ce que'.						
Savoir-faire pour: Chercher un(e) correspondant(e), Demander des nouvelles d'une personne.						
Module: 3	La Nationalité du Pays, L'article (défini/ indéfini), Les prépositions					6 hours
La Nationalité du Pays, L'article (défini/ indéfini), Les prépositions (à/en/au/aux/sur/dans/avec etc.), L'article contracté, Les heures en français, L'adjectif (La Couleur, L'adjectif possessif, L'adjectif démonstratif/ L'adjectif interrogatif (quel/quelles/quelle/quelles), L'accord des adjectifs avec le nom, L'interrogation avec Comment/ Combien / Où etc.						
Savoir-faire pour: Poser des questions, Dire la date et les heures en français,						
Module: 4	La traduction simple					4 hours
La traduction simple :(français-anglais / anglais –français), Savoir-faire pour : Faire des achats, Comprendre un texte court, Demander et indiquer le chemin.						
Module: 5	L'article Partitif, Mettez les phrases aux pluriels					5 hours
L'article Partitif, Mettez les phrases aux pluriels, Faites une phrase avec les mots donnés, Trouvez les questions. Savoir-faire pour :						

Répondez aux questions générales en français, Exprimez les phrases données au Masculin ou au Féminin, Associez les phrases.			
Module: 6	Décrivez :	3 hours	
Décrivez: La Famille / La Maison / L'université / Les Loisirs / La Vie quotidienne etc.			
Module: 7	Dialogue	4 hours	
Dialogue:			
1. Décrire une personne.			
2. Des conversations à la cafeteria.			
3. Des conversations avec les membres de la famille			
4. Des dialogues entre les amis.			
Module: 8	Guest lectures	2 hours	
Guest lectures / Natives speakers			
Total Lecture hours			30 hours
Text Book(s)			
1.	Fréquence jeunes-1, Méthode de français, G. Capelle et N.Gidon, Hachette, Paris, 2010.		
2.	Fréquence jeunes-1, Cahier d'exercices, G. Capelle et N.Gidon, Hachette, Paris, 2010.		
Reference Books

FRE2001	Français Progressif				L	T	P	J	C
					2	0	1	0	3
Pre-requisite	Français quotidien				Syllabus version				
					1.0				
Course Objectives:									
The course gives students the necessary background to:									
<ol style="list-style-type: none"> 1. understand isolated sentences and frequently used expressions in relation to immediate priority areas (personal or family information, shopping, close environment, work). 2. communicate in simple and routine tasks requiring only a simple and direct exchange of information on familiar and habitual topics. 3. enable students to describe with simple means his training, his immediate environment and evoke familiar and habitual subjects, evoke subjects that correspond to immediate needs. 									
Expected Course Outcome:									
The students will be able to :									
<ol style="list-style-type: none"> 1. understand expressions in French. 2. create sentences by using frequent lexicon related to himself, his family, his close environment (family, shopping, work, school, etc). 3. understand simple, clear messages on internet, authentic documents. 4. analyse predictable information in common documents, such as advertisements, flyers, menus, schedules, simple personal letters. 5. create simple and routine tasks. 6. create simple and direct exchange of information on familiar activities and topics. 									
Module:1	Expressions simples				8 hours				
La vie quotidiennes - Le verbe pronominal - Le passé composé avec l'auxiliaire - avoir et être- le passé récent : venir de + infinitif - Le comparatif - Le superlatif - Les mots interrogatifs (les trois formes) Savoir-faire pour : Faire des achats, faire des commandes dans un restaurant, poser des questions.									
Module:2	Les activités quotidiennes				6 hours				
La vie privée et publique (Les achats, Les voyages, les transports-La nourriture, etc.) - Les lieux de la ville - Les mots du savoir-vivre - Les pronoms indéfinis - Les pronoms démonstratifs - Les pronoms compléments objets directs/ indirects - La formation du future simple et future proche Savoir-faire pour : Réserver les billets pour le voyage, réserver les chambres dans un hôtel, S'informer sur les lieux de la ville, indiquer la direction à un étranger.									
Module:3	Les activités de loisirs				7 hours				
Les loisirs (sports/spectacles/activités) - Les moments de la journée, de l'année- La fête indienne et française – Les goûts - L'impératif - La négation de l'impératif-La place du pronom à l'impératif avec un verbe pronominal. Savoir-faire pour : Parler de ses goûts, raconter les vacances, formuler des phrases plus compliquées, Raconter les souvenirs de l'enfance, parler sur la tradition de son pays natal.									

Module:4	La Francophonie	7 hours	
L'espace francophone - Première approche de la société française – La consommation alimentaire – caractériser un objet – décrire une tenue - Le pronom relatif (qui/que/dont/où)			
Savoir-faire pour :			
Articles de la presse-Portrait d'une personne-Cartes et messages d'invitation, d'acceptation ou de refus - Article de presse - rédaction d'un événement.			
Module:5	La culture française	5 hours	
Parler de ses activités quotidiennes - les fêtes en France – Parler de sa famille – réserver un billet à l'agence - la gastronomie française			
Module:6	La description	5 hours	
Décrire physiquement une personne – les vacances – les achats – réserver une chambre dans un hôtel – les plus grands français - raconter des événements passés			
Module:7	S'exprimer	5 hours	
Parler du climat - parcours francophone – placer une commande au restaurant -- la mode - parler de son projet d'avenir.			
Module:8	Guest lectures	2 hours	
Guest lectures/ Natives speakers			
		Total Lecture hours:	45 hours
Text Book(s)

GRE1001	Modern Greek	L	T	P	J	C
		2	0	0	0	2
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To master the Greek terminology widely used in their subjects of specialization 2. To communicate in Modern Greek in their day to day life 3. To provide general information about Greece (e.g. geography, weather, food etc.) 						
Expected Course Outcomes:						
Students will be able:						
<ol style="list-style-type: none"> 1. To correctly pronounce Greek symbols and words, being more conscious and confident in the usage of their English vocabulary derived from Greek. 2. To make use of Modern Greek language in simple everyday conversation. 3. To understand contents from scientific texts that make use of Greek symbols and words, becoming familiar with fundamental linguistic aspects of the International Scientific Vocabulary as well as becoming able to formulate hypotheses about unknown compound words derived from Greek. 4. To be more aware about the evolution of Modern European languages, understanding the important connections between English and Greek/Neo-Latin languages. 5. To understand important socio-economic issues in contemporary Europe, developing their aptitude for critical thinking. 						
Module:1	Greek Alphabet: Correct usage and Pronunciation of Greek symbols	4 hours	2			
Module content: vowels and phonetic rules of diphthongs: alpha-iota / epsilon-iota / omicron-iota / and upsilon / epsilon-epsilon; consonants and their correct pronunciation; double consonants and digraphs.						
alpha- Grammar skills: correct pronunciation of the 24 Greek letters; correct pronunciation of diphthongs digraphs.						
Module:2	Greetings, introducing oneself; Proper Nouns and Proper Greek Names	3 hours	2, 11			
Communicative functions: using formal and informal greetings; introducing oneself using affirmative form.						
Grammar skills: nominative case and vocative case (singular), personal pronouns, verbs είμαι (to be) and μελένε (to be called).						
Written communication skills: introducing oneself using Greek letters and words.						
Module:3	Nationality and Provenance	5 hours	2, 11			
Communicative functions: providing personal details such as nationality, address and telephone number; Being able to name a few relevant landmarks in a city.						
Grammar skills: Common nouns (masculine in -ος/-ης/-ας; feminine in -α/-η; neuter in -ο/-ι); από / σε + accusative case; cardinal numerals from 1 to 10; verb μένω (simple present).						
Written communication skills: introducing oneself providing specific details about country and city of origin, address, telephone number.						
Module:4	Family	5 hours	2, 11			
Communicative functions: describing one's family and describing elementary physical traits (μικρός/μεγάλος – μελαχρινός/ξανθός – ψηλός/κοντός).						
Grammar skills: possessive pronouns (singular/plural); word accent						
Written communication skills: describing family and family members.						

Module:5	In the classroom: introducing others, languages and nationality adjectives	4 hours	2, 11
Communicative functions: introducing others by providing information on their nationality and spoken language(s); naming the objects in a classroom.			
Grammar skills: verb μιλάω (simple present); nationality adjectives.			
Written communication skills: introducing friends and relatives providing specific information about the language they speak.			
Module:6	Months and seasons of the year; days of the week; time and weather	4 hours	2
Communicative functions: defining time and date; talking about weather conditions.			
Grammar skills: cardinal numerals from 11 to 100; interrogative pronoun (ποιος-ποια-ποιο/τι); time adverbials (τώρα, σήμερα, χθες, αύριο, φέτος πέρσι, του χρόνου, πότε); syntax: υποκείμενο/άμεσο αντικείμενο			
Written communication skills: describing weather conditions, defining time and date.			
Module:7	Daily routine	3 hours	2, 11
Module content: communicative functions: describing one's daily routine and activities/hobbies.			
Grammar skills: verbs πάω, ακούω, λέω, τρώω, μπορώ (simple present); plural nouns (nominative case).			
Written communication skills: writing a simple letter describing a daily routine.			
Module:8	Contemporary issues:	2 hours	2, 11
Social and Economic aspects of the 2009-2017 Greek government-debt crisis and of the 2015-2018 European Refugee Crisis.

		3	0	0	0	1
Pre-requisite	None	Syllabus version				
		2.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To provide an overview of Prerequisites to Business Communication 2. To enhance the problem solving skills and improve the basic mathematical skills 3. To organize the thoughts and develop effective writing skills 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Enabling students enhance knowledge of relevant topics and evaluate the information 						
Module:1	Study skills	10 hours				
Memory techniques						
Relation between memory and brain, Story line technique, Learning by mistake, Image-name association, Sharing knowledge, Visualization						
Concept map						
Mind Map, Algorithm Mapping, Top down and Bottom Up Approach						
Time management skills						
Prioritization - Time Busters, Procrastination, Scheduling, Multitasking, Monitoring						
6. Working under pressure and adhering to deadlines						
Module:2	Emotional Intelligence (Self Esteem)	6 hours				
Empathy						
Affective Empathy and Cognitive Empathy						
Sympathy						
Level of sympathy (Spatial proximity, Social Proximity, Compassion fatigue)						
Module:3	Business Etiquette	9 hours				
Social and Cultural Etiquette						
Value, Manners, Customs, Language, Tradition						
Writing Company Blogs						
Building a blog, Developing brand message, FAQs', Assessing Competition						
Internal Communications						
Open and objective Communication, Two way dialogue, Understanding the audience						
Planning						
Identifying, Gathering Information, Analysis, Determining, Selecting plan, Progress check, Types of planning						

Writing press release and meeting notes Write a short, catchy headline, Get to the Point –summarize your subject in the first paragraph, Body – Make it relevant to your audience		
Module:4	Quantitative Ability	4 hours
Numeracy concepts Fractions, Decimals, Bodmas, Simplifications, HCF, LCM, Tests of divisibility Beginning to Think without Ink Problems solving using techniques such as: Percentage, Proportionality, Support of answer choices, Substitution of convenient values, Bottom-up approach etc. Math Magic Puzzles and brain teasers involving mathematical concepts Speed Calculations Square roots, Cube roots, Squaring numbers, Vedic maths techniques		
Module:5	Reasoning Ability	3 hours
Interpreting Diagramming and sequencing information Picture analogy, Odd picture, Picture sequence, Picture formation, Mirror image and water image Logical Links Logic based questions-based on numbers and alphabets		
Module:6	Verbal Ability	3 hours
Strengthening Grammar Fundamentals Parts of speech, Tenses, Verbs(Gerunds and infinitives) Reinforcements of Grammar concepts Subject Verb Agreement, Active and Passive Voice, Reported Speech		
Module:7	Communication and Attitude	10 hours
Writing Writing formal & informal letters, How to write a blog & knowing the format, Effective ways of writing a blog, How to write an articles & knowing the format, Effective ways of writing an articles, Designing a brochures Speaking skills How to present a JAM, Public speaking Self managing Concepts of self management and self motivation, Greet and Know, Choice of words, Giving feedback, Taking criticism

		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To enhance the logical reasoning skills of the students and improve the problem-solving abilities 2. To strengthen the ability to solve quantitative aptitude problems 3. To enrich the verbal ability of the students 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Students will be introduced to basic concepts of Quantitative Aptitude, Logical reasoning and Verbal ability 2. Students will be able to read and demonstrate good comprehension of text in areas of the student's interest 3. Students will be able to demonstrate the ability to resolve problems that occur in their field. 						
Module:1	Lessons on excellence	2hours				
Skill introspection, Skill acquisition, consistent practice						
Module:2	Logical Reasoning	16 hours				
Thinking Skill						
<ul style="list-style-type: none"> • Problem Solving • Critical Thinking • Lateral Thinking 						
Taught through thought-provoking word and rebus puzzles, and word-link builder questions						
Coding & decoding, Series, Analogy, Odd man out and Visual reasoning						
<ul style="list-style-type: none"> • Coding and Decoding • Series • Analogy • Odd Man Out • Visual Reasoning 						
Sudoku puzzles						
Solving introductory to moderate level sudoku puzzles to boost logical thinking and comfort with numbers						
Attention to detail						
Picture and word driven Qs to develop attention to detail as a skill						
Module:3	Quantitative Aptitude	14 hours				
Speed Maths						

- Addition and Subtraction of bigger numbers
- Square and square roots
- Cubes and cube roots
- Vedic maths techniques
- Multiplication Shortcuts
- Multiplication of 3 and higher digit numbers
- Simplifications
- Comparing fractions
- Shortcuts to find HCF and LCM
- Divisibility tests shortcuts

Algebra and functions

Module:4	Recruitment Essentials	5hours
-----------------	-------------------------------	---------------

Looking at an engineering career through the prism of an effective resume

- Importance of a resume - the footprint of a person's career achievements
- How a resume looks like?
- An effective resume vs. a poor resume: what skills you must build starting today and how?

Impression Management

Getting it right for the interview:

- Grooming, dressing
- Body Language and other non-verbal signs
- Displaying the right behaviour

Module:5	Verbal Ability	8hours
-----------------	-----------------------	---------------

Essential grammar for placements:

- Nouns and Pronouns
- Verbs
- Subject-Verb Agreement
- Pronoun-Antecedent Agreement
- Punctuations

Verbal Reasoning

3.	M. Neil Browne, Stuart M. Keeley, Asking the right questions, 2014, 11 th Edition, Pearson, London.		
Mode of Evaluation: FAT, Assignments, Projects, Case studies, Role plays, 3 Assessments with Term End FAT (Computer Based Test)			
Recommended by Board of Studies		09/06/2017	
Approved by Academic Council		No. 45 th AC	Date 15/06/2017

STS2101	Getting Started to Skill Enhancement	L	T	P	J	C
		3	0	0	0	1
Pre-requisite	None	Syllabus version				
		1.0				
Course Objectives:						
<ul style="list-style-type: none"> To develop the students' logical thinking skills and apply it in the real-life scenarios To learn the strategies of solving quantitative ability problems To enrich the verbal ability of the students 						
Expected Course Outcome:						
<ul style="list-style-type: none"> Students will be able to demonstrate critical thinking skills, such as problem solving related to their subject matters Students will be able to demonstrate competency in verbal, quantitative and reasoning aptitude Students will be able to perform good written communication skills 						
Module:1	Logical Reasoning	11 hours				
Clocks, calendars, Direction sense and Cubes						
<ul style="list-style-type: none"> Clocks Calendars Direction Sense Cubes 						
Data interpretation and Data sufficiency						
<ul style="list-style-type: none"> Data Interpretation – Tables Data Interpretation - Pie Chart Data Interpretation - Bar Graph Data Sufficiency 						
Module:2	Quantitative Aptitude	18 hours				
Time and work						
<ul style="list-style-type: none"> Work with different efficiencies Pipes and cisterns Work equivalence Division of wages 						
Time, Speed and Distance						
<ul style="list-style-type: none"> Basics of time, speed and distance Relative speed Problems based on trains Problems based on boats and streams Problems based on races 						

Profit and loss, Partnerships and averages			
<ul style="list-style-type: none"> • Basic terminologies in profit and loss • Partnership • Averages • Weighted average 			
Module:3		Verbal Ability	13hours
Sentence Correction			
<ul style="list-style-type: none"> • Subject-Verb Agreement • Modifiers • Parallelism • Pronoun-Antecedent Agreement • Verb Time Sequences • Comparisons • Prepositions • Determiners 			
Sentence Completion and Para-jumbles			
<ul style="list-style-type: none"> • Pro-active thinking • Reactive thinking (signpost words, root words, prefix suffix, sentence structure clues) • Fixed jumbles • Anchored jumbles 			
Module:4		Writing skills for placements	3 hours
Essay writing			
<ul style="list-style-type: none"> • Idea generation for topics • Best practices • Practice and feedback 			
		Total Lecture hours:	45 hours
Mode of Evaluation: FAT, Assignments, 3 Assessments with Term End FAT (Computer Based Test)

<ul style="list-style-type: none"> Students will be able to demonstrate critical thinking skills, such as problem solving related to their subject matters Students will be able to demonstrate competency in verbal, quantitative and reasoning aptitude Students will be able to perform good written communication skills 						
Module:1	Logical Reasoning	10 hours				
Clocks, calendars, Direction sense and Cubes						
<ul style="list-style-type: none"> Clocks Calendars Direction Sense Cubes 						
Practice on advanced problems						
Data interpretation and Data sufficiency - Advanced						
<ul style="list-style-type: none"> Advanced Data Interpretation and Data Sufficiency questions of CAT level Multiple chart problems Caselet problems 						
Module:2	Quantitative Aptitude	19 hours				
Time and work – Advanced						
<ul style="list-style-type: none"> Work with different efficiencies Pipes and cisterns: Multiple pipe problems Work equivalence Division of wages Advanced application problems with complexity in calculating total work 						
Time, Speed and Distance - Advanced						
<ul style="list-style-type: none"> Relative speed Advanced Problems based on trains Advanced Problems based on boats and streams 						

- Advanced Problems based on races

Profit and loss, Partnerships and averages - Advanced

- Partnership
- Averages
- Weighted average

Advanced problems discussed

Number system - Advanced

Advanced application problems on Numbers involving HCF, LCM, divisibility tests, remainder and power cycles.

Module:3	Verbal Ability	13 hours
-----------------	-----------------------	-----------------

Sentence Correction - Advanced

- Subject-Verb Agreement
- Modifiers
- Parallelism
- Pronoun-Antecedent Agreement
- Verb Time Sequences
- Comparisons
- Prepositions
- Determiners

Quick introduction to 8 types of errors followed by exposure to GMAT level questions

Sentence Completion and Para-jumbles - Advanced

- Pro-active thinking
- Reactive thinking (signpost words, root words, prefix suffix, sentence structure clues)
- Fixed jumbles
- Anchored jumbles

Practice on advanced GRE/ GMAT level questions

Reading Comprehension – Advanced

Exposure to difficult foreign subject-based RCs of the level of GRE/ GMAT

Module:4	Writing skills for placements	3 hours	
-----------------	--------------------------------------	----------------	--

Essay writing

- Idea generation for topics
- Best practices
- Practice and feedback

Total Lecture hours:	45 hours
-----------------------------	-----------------

Mode of Evaluation: FAT, Assignments, 3 Assessments with Term End FAT (Computer Based Test)

STS3001	Preparedness for External Opportunities	L	T	P	J	C
		3	0	0	0	1
Pre-requisite	None	Syllabus version				
		2.0				
Course Objectives:						
<p>1. To effectively tackle the interview process, and leave a positive impression with your prospective employer by reinforcing your strength, experience and appropriateness for the job.</p> <p>2. To check if candidates have the adequate writing skills that are needed in an organization.</p> <p>3. To enhance the problem solving skills.</p>						
Expected Course Outcome:						
1. Enabling students acquire skills for preparing for interviews, presentations and higher education						
Module:1	Interview Skills	3 hours				
<p>Types of interview Structured and unstructured interview orientation, Closed questions and hypothetical questions, Interviewers' perspective, Questions to ask/not ask during an interview</p> <p>Techniques to face remote interviews Video interview, Recorded feedback , Phone interview preparation</p> <p>Mock Interview Tips to customize preparation for personal interview, Practice rounds</p>						
Module:2	Resume Skills	2 hours				
<p>Resume Template Structure of a standard resume, Content, color, font</p> <p>Use of power verbs Introduction to Power verbs and Write up</p> <p>Types of resume Quiz on types of resume</p> <p>Customizing resume Frequent mistakes in customizing resume, Layout - Understanding different company's requirement, Digitizing career portfolio</p>						
Module:3	Presentation Skills	6 hours				
<p>Preparing presentation 10 tips to prepare PowerPoint presentation, Outlining the content, Passing the Elevator Test</p> <p>Organizing materials Blue sky thinking, Introduction , body and conclusion, Use of Font, Use of Color, Strategic presentation</p> <p>Maintaining and preparing visual aids</p>						

Importance and types of visual aids, Animation to captivate your audience, Design of posters
Dealing with questions
 Setting out the ground rules, Dealing with interruptions, Staying in control of the questions,
 Handling difficult questions

Module:4	Quantative Ability	14 hours
-----------------	---------------------------	-----------------

Permutation-Combinations
 Counting, Grouping, Linear Arrangement, Circular Arrangements
Probability
 Conditional Probability, Independent and Dependent Events
Geometry and Mensuration
 Properties of Polygon, 2D & 3D Figures, Area & Volumes
Trigonometry
 Heights and distances, Simple trigonometric functions
Logarithms
 Introduction, Basic rules
Functions
 Introduction, Basic rules
Quadratic Equations
 Understanding Quadratic Equations, Rules & probabilities of Quadratic Equations
Set Theory
 Basic concepts of Venn Diagram

Module:5	Reasoning Ability	7 hours
-----------------	--------------------------	----------------

Logical reasoning
 Syllogisms, Binary logic, Sequential output tracing, Crypto arithmetic
Data Analysis and Interpretation
 Data Sufficiency
 Data interpretation-Advanced Interpretation tables, pie charts & bar chats

Module:6	Verbal Ability	8 hours
-----------------	-----------------------	----------------

Comprehension and Logic
 Reading comprehension
 Para Jumbles
 Critical Reasoning :
 Premise and Conclusion, Assumption & Inference, Strengthening & Weakening an Argument

Module:7	Writing Skills	5 hours
-----------------	-----------------------	----------------

Note making
 What is note making, Different ways of note making
Report writing

What is report writing, How to write a report, Writing a report & work sheet			
Product description			
Designing a product, Understanding it's features, Writing a product description			
Research paper			
Research and its importance, Writing sample research paper			
		Total Lecture hours:	45 hours

STS3004	Data Structures and Algorithms				L	T	P	J	C
					3	0	0	0	1
Pre-requisite	None				Syllabus version				
					1.0				
Course Objectives:									
1. To assess how the choice of data structures and algorithm design methods impacts the performance of programs.									
2. To develop logics which will help them to create programs, applications in C.									
3. To learn how to design a graphical user interface (GUI) with Java Swing.									
Expected Course Outcome:									
1. Clear knowledge about problem solving skills in DS & Algorithms concepts									
Module:1	Data Structures				10 hours				
Introduction to data structures, Array, Linked List, Stack, Queue, Trees.									
Module:2	Algorithms				15 hours				
Introduction to Algorithms, Searching Algorithms, Sorting Algorithms, Greedy Algorithm, Divideand Conquer, Analysis of Algorithm.									
Module:3	C Programming				10 hours				
Introduction to C, Execution and Structure of a C Program, Data Types and Operators, Control Statements, Looping, Arrays, Structure, Pointers, Memory Management in C, Functions									
Module:4	C++ Programming				5 hours				
Introduction to C++, Need for OOP, Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstract Classes.									
Module:5	JAVA				5 hours				
Introduction to Java, Data Types and Operators, Control Statements, Looping, Arrays, Need for OOP, Class & Objects, Create C++ & Java class and show the similarity Encapsulation, Access Specifiers, Relationship, Polymorphism, Exception Handling, Abstract Classes, Interfaces.									
	Total Lecture hours:				45 hours				
Reference Books									
1.	Data Structures and Algorithms: https://ece.uwaterloo.ca/~dwharder/aads/Lecture_materials/ : University of waterloo								
2.	C Programming: C Programming Absolute Beginner's Guide (3rd Edition) by Greg Perry, Dean Miller								
3.	Java: Thinking in Java, 4th Edition

STS3101	Introduction to Programming Skills	L	T	P	J	C
		3	0	0	0	1
Pre-requisite	None	Syllabus version				
		1.0				
Course Objectives:						
<ul style="list-style-type: none"> • Ability to translate vast data into abstract concepts and to understand JAVA concepts • To have a clear understanding of subject related concepts • To develop computational ability in Java programming language 						
Expected Course Outcome:						
<ul style="list-style-type: none"> • Clear Knowledge about problem solving skills in JAVA concepts • Students will be able to write codes in Java 						
Module:1	Object and Class, Data types	8 hours				
Types of programming Disadvantages of functional programming Class & Objects Attributes Methods Objects Solving MCQs based on Objects and Classes Solving tricky questions based on encapsulation Solving frequently asked object-based questions Data types Data Why data type Variables Available data types Numeric – int, float, double Character – char, string Solving MCQs based on type casting, data types Solving debugging based MCQs						
Module:2	Basic I / O, Decision Making, Loop Control	8 hours				
Printing Getting input from user during run time Command line arguments Solving programming questions based on CLA Solving MCQs questions based on CLA						

<p>Need for control statement if..else if..else if..else Nested if..else Switch case Common mistakes with control statements (like using = instead of ==) Solving frequently asked questions on decision making</p> <p>Types of looping statements Entry Controlled For While Exit Controlled do while break and continue Demo on looping Common mistakes with looping statements (like using; at the end of the loop) Solving pattern programming problems, series problems Solving predict the output questions</p>		
Module:3	String, Date, Array	10 hours
<p>String handling, date handling Solving problems based on arrays like searching, sorting, rearranging, iteration) Multi-dimensional arrays Solving pattern problems using 2D arrays Real time application based on 2D arrays</p>		
Module:4	Inheritance, Aggregation & Associations	12 hours
<p>Need Is A – Inheritance Types of inheritance supported Diagrammatic representation Demo on inheritance Has A – Aggregation Diagrammatic representation Demo on aggregation Uses A - Association Diagrammatic representation Demo on association Assignment on relationships Solving MCQs based on relationships between classes</p>		
Module:5	Modifiers, Interface & Abstract classes (Java specific), Packages	7 hours
<p>Types of access specifiers Demo on access specifiers</p>		

Assignment on access modifiers Instance Members Solving MCQs based on modifiers Abstract Classes Need Abstract Classes Abstract Methods Interfaces Assignment on abstract classes and interface Need for packages Access specifiers & packages Import classes from other packages			
		Total Lecture hours:	45 hours

		1.0				
Course Objectives:						
<ul style="list-style-type: none"> • Ability to translate vast data into abstract concepts and to understand JAVA concepts • To have a clear understanding of subject related concepts • To develop computational ability in Java programming language 						
Expected Course Outcome:						
<ul style="list-style-type: none"> • Clear Knowledge about problem solving skills in JAVA concepts • Students will be able to write codes in Java 						
Module:1	Collections	12 hours				
ArrayList, LinkedList, List Interface, HashSet, Map Interface, HashMap, Set Programming questions based on collections Real world problems based on data structure						
Module:2	Threads, Exceptions, LinkedList, Arrays	6 hours				
Need of threads Creating threads Wait Sleep Thread execution Need for exception handling try, catch, throw, throws Creating own exception (Java, Python) Handling own exceptions Solving programming questions based on linked list and arrays						
Module:3	Stack and Queue, Trees	7 hours				
Solving programming questions based on stacks and queues How to implement a stack using queue? How to implement a queue using stack? Solving programming questions based on trees, binary trees, binary search trees						
Module:4	JDBC Connectivity, JDBC Data	10 hours				
JDBC Overview Database Setup						

Install the MySQL Database Create New Database User in MySQL Workbench Selecting data from tables Inserting Data into the Database Updating Data in the Database Deleting Data from the Database Creating Prepared Statements			
Module:5	Networking with Java		10 hours
Working with URLs Sending HTTP Requests Processing JSON data using Java Processing XML data using Java			
		Total Lecture hours:	45 hours
Reference Books			
1.	Java The Complete Reference, 2014, 9th Edition by By Herbert Schildt, McGraw-Hill Education Pvt Ltd		
2.	Introduction to Programming with Java: A Problem-Solving Approach by John Dean		
Mode of Evaluation: FAT, Assignments, 3 Assessments with Term End FAT (Computer Based Test)			
Recommended by Board of Studies			
Approved by Academic Council	No. 53 rd AC	Date	13.12.2018

STS3105	Computational Thinking				L	T	P	J	C
					3	0	0	0	1
Pre-requisite	None				Syllabus version				
					1.0				
Course Objectives:									
<ul style="list-style-type: none"> • Ability to translate vast data into abstract concepts and to understand JAVA concepts • To have a clear understanding of subject related concepts • To develop computational ability in Java programming language 									
Expected Course Outcome:									
<ul style="list-style-type: none"> • Clear Knowledge about problem solving skills in JAVA concepts • Students will be able to write codes in Java 									
Module:1	Date, Array				10 hours				
date handling Solving problems based on arrays like searching, sorting, rearranging, iteration) Multi-dimensional arrays Solving pattern problems using 2D arrays Real time application based on 2D arrays									
Module:2	Inheritance, Aggregation & Associations				15 hours				
Need Is A – Inheritance Types of inheritance supported Diagrammatic representation Demo on inheritance Has A – Aggregation Diagrammatic representation Demo on aggregation Uses A - Association Diagrammatic representation Demo on association Assignment on relationships Solving MCQs based on relationships between classes									
Module:3	Modifiers, Interface & Abstract classes (Java specific)				10 hours				
Types of access specifiers Demo on access specifiers Assignment on access modifiers Instance Members Solving MCQs based on modifiers									

Abstract Classes Need Abstract Classes Abstract Methods Interfaces Assignment on abstract classes and interface			
Module:4	Packages	5 hours	
Need for packages Access specifiers & packages Import classes from other packages			
Module:5	Exceptions	5 hours	
Need for exception handling try, catch, throw, throws Creating own exception (Java, Python) Handling own exceptions			
		Total Lecture hours:	45 hours

STS5002	Preparing for Industry				L	T	P	J	C
					3	0	0	0	1
Pre-requisite					Syllabus version				
					2.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. To develop the students' logical thinking skills 2. To learn the strategies of solving quantitative ability problems 3. To enrich the verbal ability of the students 4. To enhance critical thinking and innovative skills 									
Expected Course Outcome:									
1. Enabling students to simplify, evaluate, analyze and use functions and expressions to simulate real situations to be industry ready.									
Module:1	Interview skills – Types of interview and Techniques to face remote interviews and Mock Interview				3 hours				
Structured and unstructured interview orientation, Closed questions and hypothetical questions, Interviewers' perspective, Questions to ask/not ask during an interview, Video interview, Recorded feedback, Phone interview preparation, Tips to customize preparation for personal interview, Practice rounds									
Module:2	Resume skills – Resume Template and Use of power verbs and Types of resume and Customizing resume				2 hours				
Structure of a standard resume, Content, color, font, Introduction to Power verbs and Write up, Quiz on types of resume, Frequent mistakes in customizing resume, Layout - Understanding different company's requirement, Digitizing career portfolio									
Module:3	Emotional Intelligence - L1 – Transactional Analysis and Brain storming and Psychometric Analysis and Rebus Puzzles/Problem Solving				12 hours				
Introduction, Contracting, ego states, Life positions, Individual Brainstorming, Group Brainstorming, Stepladder Technique, Brain writing, Crawford's Slip writing approach, Reverse brainstorming, Star bursting, Charlette procedure, Round robin brainstorming, Skill Test, Personality Test, More than one answer, Unique ways									
Module:4	Quantitative Ability-L3 – Permutation-Combinations and Probability and Geometry				14 hours				

	and mensuration and Trigonometry and Logarithms and Functions and Quadratic Equations and Set Theory	
Counting, Grouping, Linear Arrangement, Circular Arrangements, Conditional Probability, Independent and Dependent Events, Properties of Polygon, 2D & 3D Figures, Area & Volumes, Heights and distances, Simple trigonometric functions, Introduction to logarithms, Basic rules of logarithms, Introduction to functions, Basic rules of functions, Understanding Quadratic Equations, Rules & probabilities of Quadratic Equations, Basic concepts of Venn Diagram		
Module:5	Reasoning ability-L3 – Logical reasoning and Data Analysis and Interpretation	7 hours
Syllogisms, Binary logic, Sequential output tracing, Crypto arithmetic, Data Sufficiency, Data interpretation-Advanced, Interpretation tables, pie charts & bar chats		
Module:6	Verbal Ability-L3 – Comprehension and Logic	7 hours
Reading comprehension, Para Jumbles, Critical Reasoning (a) Premise and Conclusion, (b) Assumption & Inference, (c) Strengthening & Weakening an Argument		
	Total Lecture hours:	45 hours

BRIDGE COURSE

CHY1002	Environmental Sciences	L	T	P	J	C
		3	0	0	0	3
Pre-requisite		Syllabus version				
		1.1				
Course Objectives:						
<ol style="list-style-type: none"> 1. To make students understand and appreciate the unity of life in all its forms, the implications of life style on the environment. 2. To understand the various causes for environmental degradation. 3. To understand individuals contribution in the environmental pollution. 4. To understand the impact of pollution at the global level and also in the local environment. 						
Expected Course Outcome: Students will be able to						
<ol style="list-style-type: none"> 1. Students will recognize the environmental issues in a problem oriented interdisciplinary perspectives 2. Students will understand the key environmental issues, the science behind those problems and potential solutions. 3. Students will demonstrate the significance of biodiversity and its preservation 4. Students will identify various environmental hazards 5. Students will design various methods for the conservation of resources 6. Students will formulate action plans for sustainable alternatives that incorporate science, humanity, and social aspects 7. Students will have foundational knowledge enabling them to make sound life decisions as well as enter a career in an environmental profession or higher education. 						
Module:1	Environment and Ecosystem	7 hours				
Key environmental problems, their basic causes and sustainable solutions. IPAT equation. Ecosystem, earth – life support system and ecosystem components; Food chain, food web, Energy flow in ecosystem; Ecological succession- stages involved, Primary and secondary succession, Hydrarch, mesarch, xerarch; Nutrient, water, carbon, nitrogen, cycles; Effect of human activities on these cycles.						
Module:2	Biodiversity	6 hours				
Importance, types, mega-biodiversity; Species interaction - Extinct, endemic, endangered and rare species; Hot-spots; GM crops- Advantages and disadvantages; Terrestrial biodiversity and Aquatic biodiversity – Significance, Threats due to natural and anthropogenic activities and Conservation methods.						
Module:3	Sustaining Natural Resources and Environmental Quality	7 hours				
Environmental hazards – causes and solutions. Biological hazards – AIDS, Malaria, Chemical hazards- BPA, PCB, Phthalates, Mercury, Nuclear hazards- Risk and evaluation of hazards. Water footprint; virtual water, blue revolution. Water quality management and its conservation. Solid and hazardous waste – types and waste management methods.						

Module:4	Energy Resources	6 hours
Renewable - Non renewable energy resources- Advantages and disadvantages - oil, Natural gas, Coal, Nuclear energy. Energy efficiency and renewable energy. Solar energy, Hydroelectric power, Ocean thermal energy, Wind and geothermal energy. Energy from biomass, solar- Hydrogen revolution.		
Module:5	Environmental Impact Assessment	6 hours
Introduction to environmental impact analysis. EIA guidelines, Notification of Government of India (Environmental Protection Act – Air, water, forest and wild life). Impact assessment methodologies. Public awareness. Environmental priorities in India.		
Module:6	Human Population Change and Environment	6 hours
Urban environmental problems; Consumerism and waste products; Promotion of economic development – Impact of population age structure – Women and child welfare, Women empowerment. Sustaining human societies: Economics, environment, policies and education.		
Module:7	Global Climatic Change and Mitigation	5 hours
Climate disruption, Green house effect, Ozone layer depletion and Acid rain. Kyoto protocol, Carbon credits, Carbon sequestration methods and Montreal Protocol. Role of Information technology in environment-Case Studies.		
Module:8	Contemporary issues	2 hours
Lecture by Industry Experts		
	Total Lecture hours:	45 hours
Text Books

ENG1002	Effective English			L	T	P	J	C
				0	0	4	0	2
Pre-requisite	Not cleared English Proficiency Test (EPT)			Syllabus version				
				v.2.0				
Course Objectives:								
1. To enable students develop basic proficiency in Language Skills 2. To help students overcome communication barriers 3. To facilitate students communicate effectively in academic and social contexts								
Expected Course Outcome:								
1. Speak fluently in academic and social contexts 2. Listen for global and specific comprehension to improve study skills like notetaking, summarizing, etc 3. Read and comprehend technical and general texts 4. Write grammatically correct creative and descriptive sentences and paragraphs in specific contexts 5. Enact on social contexts with a message, and communicate clearly and effectively in formal and informal contexts								
Mode of Evaluation: Online Quizzes, Presentation, Role play, Group Discussions, Assignments, Mini project.								
List of Challenging Experiments (Indicative)								
1.	Speaking: Introduce yourself using Temperament Sorter			8 hours				
2.	Reading: Loud Reading with focus on pronunciation			4 hours				
3.	Writing: Descriptive Writing – Process Compare & Contrast – Product description			6 hours				
4.	Speaking: Just a Minute / Activities through VIT Community Radio			6 hours				
5.	Writing: Travelogue Writing - 25+ FAQs (Wh-questions) on a place they have visited – Pair work			10 hours				
6.	Speaking: Discuss facts and opinions using question tags			6 hours				
7.	Writing: Formal Letter Writing focusing on Content			6 hours				
8.	Vocabulary: Correct spelling errors			4 hours				
9.	Speaking: Asking for and giving Directions/Instructions			6 hours				
10.	Writing: Story writing using prompts/pictures			4 hours				
							Total Laboratory Hours	60 hours
