

VIT[®]

Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

CURRICULUM AND SYLLABI

(2018-2019)

M.Tech (CSE) - Specialisation in Big Data Analytics

VIT[®]

Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

PEOs - M.Tech (CSE) - Specialisation in Big Data Analytics

1. To provide students with the fundamental technical knowledge and skills in computer science and engineering to recognize and solve problems in the areas of Data structures and programming language.
2. To provide students with the necessary skills and practical experience to fulfil their professional duties and responsibilities in teamwork, ethics, technical leadership, business acumen and lifelong learning.
3. To make the students be in a position to practice professionally in various positions in industry or government and succeed in graduate or other professional schools.
4. To mould the students to become future engineers, scientists, researchers, and innovators and make substantial contributions to the society of Computer science and engineers.
5. To prepare the students to be successful engineers or managers meeting the global industrial requirements.
6. To make the students put constant efforts to improve the living quality of all walks of life by solving wide range of problems.

Vellore Institute of Technology

(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

Student Learning Outcomes (SLO) M.Tech(CSE) - Specialisation in Big Data Analytics

1. Having an ability to apply mathematics and science in engineering applications.
2. Having a clear understanding of the subject related concepts and of contemporary issues
3. Having an ability to be socially intelligent with good SIQ (Social Intelligence Quotient) and EQ (Emotional Quotient)
4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)
5. Having design thinking capability
6. Having an ability to design a component or a product applying all the relevant standards and with realistic constraints
7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)
8. Having Virtual Collaborating ability
9. Having problem solving ability- solving social issues and engineering problems.
10. Having a clear understanding of professional and ethical responsibility
11. Having interest in lifelong learning
12. Having adaptive thinking and adaptability
13. Having cross cultural competency exhibited by working in teams
14. Having an ability to design and conduct experiments, as well as to analyze and interpret data
15. Having an ability to use the social media effectively for productive use
16. Having a good working knowledge of communicating in English
17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice
18. Having critical thinking and innovative skills
19. Having a good cognitive load management [discriminate and filter the available data] skills
20. Having a good digital footprint

VIT[®]

Vellore Institute of Technology

(Deemed to be University under section 3 of UGC Act, 1956)

School of Computer Science and Engineering

PSOs - M.Tech(CSE) - Specialisation in Big Data Analytics

1. Develop and apply innovative, state-of-the-art practices and technologies and Provide sustainable solutions to the Computer Science and Engineering Problems.
2. To program various issues related to Industry standards that built the environment and also protecting, restoring the natural environment.
3. Apply modern Programming techniques, advanced languages, Lab equipments and management tools so as to complete the Computer Science and Engineering project within specified time and funds.

CSE5001	ALGORITHMS: DESIGN AND IMPLEMENTATION	L	T	P	J	C
		2	0	2	0	3
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
<p>1.To focus on the design of algorithms in various domains</p> <p>2.To provide a foundation for designing efficient algorithms.</p> <p>3.To provide familiarity with main thrusts of working algorithms-sufficient to gives context for formulating and seeking known solutions to an algorithmic problem.</p>						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Solve a problem using Algorithms and design techniques 2. Solve complexities of problems in various domains 3. Implement algorithm, compare their performance characteristics, and estimate their potential effectiveness in applications 4. Solve optimization problems using simplex algorithm 5. Designing approximate algorithms for graph theoretical problems 6. Application of appropriate search algorithms for graphs and trees 7. Application of computational geometry method on optimization problems 						
Student Learning Outcomes (SLO):						
<ol style="list-style-type: none"> 1.Having an ability to apply mathematics and science in engineering applications 5.Having design thinking capability 18.Having critical thinking and innovative skills 						
Module:1	Introduction	5 hours				
Algorithm design techniques : Divide and Conquer, Brute force, Greedy, Dynamic Programming. Time complexity (asymptotic notation, recurrence relations)						
Module:2	Network Flows	5 hours				
Maximum Flows, Min-cost Flows, Max-Flow Min-Cut Theorem, Cycle Canceling Algorithms, Strongly Polynomial-time Analysis, Minimum Cuts without Flows						
Module:3	Tractable and Intractable Problems	3 hours				
Class complexity: P, NP, NP-Hard, NP-Complete Approximation Algorithms						
Module:4	Approximation Algorithms	3 hours				
Limits to Approximability, Vertex Cover problem, Set cover problem, Euclidean TSP						
Module:5	Search Algorithms for Graphs and Trees	4 hours				
Limits to Approximability, Vertex Cover problem, Set cover problem, Euclidean TSP						
Module:6	Computational Geometry	4 hours				
Line Segments, Convex hull finding algorithms						
Module:7	Linear Programming	2 hours				
Representing problems-shortest paths, maximum flow ,and minimum-cost flow as linear programming problems. Simplex algorithm						

Module:8	Recent Trends	2 hours
Total Lecture hours:		
		30 hours
Text Book(s)		
Reference Books		
	<ol style="list-style-type: none"> 1. Cormen, Leiserson, Rivest and Stein, Introduction to Algorithms, 3rd edition, McGraw-Hill, 2009. 2. J.Kleinberg and E.Tardos. Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
List of Challenging Experiments (Indicative)		
1.	Implementation of algorithms for problems that can be solved by one or more of the following strategies : Divide and Conquer, Brute force, Greedy, Dynamic Programming.	2 hours
2.	Implementation of Ford Fulkerson method, Edmonds-Karp algorithm for finding maximum flow in a flow network and applying them for solving typical problems such as railway network flow, maximum bipartite matching	2 hours
3.	Implementation of Dinics strongly polynomial algorithm for computing them maximum flow in a flow network and applying it for solving typical problems	2 hours
4.	Implementation of push-relabel algorithm of Goldberg and Tarjan for finding maximum flow in a flow network and applying it for solving typical problems	2 hours
5.	Applying linear programming for solving maximum flow problem	2 Hours
6.	Applying network flow algorithms for baseball elimination and airline scheduling	2 Hours
7.	Given a flow network $G=(V,E,s,t)$,where V is the vertex set, E is the edge set ,s and t are source and destination. An edge of the flow network is called critical if a decrease in the flow over that edge results in a decrease in the total flow of the flow network. An edge of the flow network is called a bottleneck edge if an increase in the flow over that edge results in an increase in the total flow of the flow network. Assume that you are using to compute the maximum flow of the network. (a) Write a program(any language)to identify all the critical edges. (a) Write a program (any language)to identify all bottleneck edges in the network.	3 Hours
8.	Implementation of solution techniques for the minimum-cost flow	2 hours

	problem	
9.	Design a polynomial time algorithm to compute the solution of a linear programming problem in two dimensions. Your algorithm should convert each constrain to f the problem, into a planar region. Use that algorithm to compute the solution of the following problem. Implement your algorithm in any programming language. A manufacturer of furniture makes two products: chairs and tables. Processing of these products is done on two machines M1 and M2. A chair requires 2hours on machine M1and 6hours on machine M2. A table requires5 hours on machine M1and no time on machine M2.There are 16 hours of time per day available on machine M1and30 hours on machine M2. Profits gained by manufacturer from a chair and a table are Rs.1and Rs.5 respectively. The problem is to maximize the profit for the manufacturer.	2 hours
10.	Implementation of algorithms for the vertex cover problem, set cover problem, TSP	2 hours
11.	Implementation of search algorithms for graphs and trees: fundamental algorithms, Dijkstras algorithm	2 hours
12.	Consider the problem of barricading sleeping tigers by a fence of shortest length. Forest officials have tranquilized each tiger. Suggest an algorithm for the purpose. You are allowed to assume any information required for your algorithm. Implement your algorithm in any programming language (using convex hull)	3 hours
13.	A simple polygon is defined as a flat shape consisting of straight non-intersecting line segments or sides that are joined pairwise tofromaclosedpath.Let p_1, p_2, \dots, p_n be a set of points in the two dimensional plane. (a) Write a program to find the simple polygon of P. (b) Write a program (linear time) to convert that the simple polygon of P to a Convex Hull.	3 hours

CSE5003	DATABASE SYSTEMS: DESIGN AND IMPLEMENTATION	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To emphasize the underlying principles of Relational Database Management System. 2. To model and design advanced data models to handle threat issues and counter measures. 3. To implement and maintain the structured, semi-structured and unstructured data in an efficient database system using emerging trends. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Design and implement database depending on the business requirements and considering various design issues. 2. Select and construct appropriate parallel and distributed database architecture and formulate the cost of queries accordingly. 3. Understand the requirements of data and transaction management in mobile and spatial database and differentiate those with RDBMS. 4. Categorize and design the structured, semi-structured and unstructured databases. 5. Characterize the database threats and its counter measures. 6. Review cloud, streaming and graph databases. 7. Comprehend, design and query the database management system. 						
Student Learning Outcomes (SLO):						
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications 5. Having design thinking capability 7. Having computational thinking (Ability to translate vast data into abstract concepts and to understand database reasoning) 						
Module:1	Relational Model	6 hours				
Database System Architecture–EER Modeling–Indexing–Normalization–Query processing and optimization – Transaction Processing						
Module:2	Parallel Databases	4 hours				
Architecture, Data partitioning strategy, Interquery and Intraquery Parallelism –Parallel Query Optimization						
Module:3	Distributed Databases	5 hours				
Features – Distributed Database Architecture –Fragmentation –Replication- Distributed Query Processing – Distributed Transactions Processing						
Module:4	Spatial and Mobile Databases	3 hours				
Spatial databases-Type of spatial data–Indexing in spatial databases, Mobile Databases– Transaction Model in MDS						
Module:5	SemiStructured Databases	4 hours				
Semi Structured databases – XML –Schema-DTD- XPath- XQuery, Semantic Web –RDF–RDFS						
Module:6	Database Security	3 hours				

Introduction to Database Security Issues–Security Models–Different Threats to databases– Counter measures to deal with these problems			
Module:7	Emerging Technologies	3 hours	
Cloud databases – Streaming Databases - Graph Databases-New SQL			
Module:8	Recent Trends	2 hours	
Total Lecture hours: 30 hours			
Text Book(s)			
	<ol style="list-style-type: none"> 1. AviSilberschatz,HankKorth,andS.Sudarshan,,"DatabaseSystemConcepts",6thEd..McGraw Hill, 2010. 2. Ramez Elmasri B.Navathe: "Fundamentals of database systems", 7th edition, Addison Wesley,2014 		
Reference Books

Quin: "Beginning XML", Wiley India Private Limited5th Edition, 2012. 3. Thomas M. Connolly and Carolyn Begg "Database Systems: A Practical Approach to Design, Implementation, and Management", 6th edition, Pearson India, 2015. 		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Model any given scenario into ER/EER Model using any tool ERD Plus, ER Win, Oracle SQL developer)	1 hours	
2.	Creating applications with RDBMS Table creation with constraints, alter schema, insert values, aggregate functions, simple and complex queries with joins PLSQL-PROCEDURES, CURSORS, FUNCTIONS, TRIGGERS	3 hours	
3.	Partition a given database based on the type of query and compares the execution speed of the query with/without parallelism.	3 hours	
4.	Create an XML document and validate it against an XML Schema/DTD. Use XQuery to query and view the contents of the database.	2hours	
5.	Consider an application in which the results of football games are to be represented in XML,DTD and Xquery. For each game, we want to be able to represent the two teams involved ,which one was playing at home, which players scored goals(some of which may have been penalties)and the time when each was scored, and which players were shown yellow or red cards. You might use some attributes. You can check your solutions with the online demo of the Zorba XQueryengine4.	3 hours	
6.	To implement parallel join and parallel sort algorithms to get marks from different colleges of the university and publish10 ranks for each discipline.	2 hours	

7.	Create a distributed database scenario, insert values, fragment the database and query the database.	
8.	Consider a schema that contains the following table with the key underlined: Employee (Eno, <u>Ename</u> , Desg, Dno). Assume that we horizontally fragment the table as follows: Employee1(Eno; Ename; Desg;Dno), where 1 ≤ Dno ≤ 10 Employee2(Eno;Ename; Desg; Dno), where 11 ≤ Dno ≤ 20 Employee3(Eno;Ename; Desg;Dno), where 21 ≤ Dno ≤ 30 In addition, assume we have 4 sites that contain the following fragments: Site1 has Employee1 Site2 has Employee2 Site3 has Employee2 and Employee3 Site4 has Employee1 Implement at least 5 suitable queries on Employee fragments. Add relations to the database as per your requirements.	3 hours
9.	Download a spatial dataset based on any specific theme (containing layer information) from Quantum GIS and import it into Postgres SQL(PostGIS) and Query and view the database.	2 hours
10.	To investigation of some spatial analysis techniques using Toxic Release Inventory (www.epa.gov/triexplorer/) data for Massachusetts from the Environmental Protection Agency (EPA), which indicate the magnitude of the releases of toxic core chemicals into land, water and air at a site in the state. Note that these TRI locations were geo coded from a list of addresses provided by the EPA	3 hours
11.	Use sample datasets from health care domain, Visualize and interpret the results	3 hours
12.	Import the Hubway data into Neo4j and configure Neo4j. Then, answer the following questions using the Cypher Query Language: a) List top 10 stations with most outbound trips (Show station name and number of trips) b) List top 10 stations with most inbound trips (Show station name and number of trips) c) List top 5 routes with most trips (Show starting station name, ending station name and number of trips) (4) List the hour number (for example 13 means 1pm -2pm) and number of trips which start from the station "B.U. Central" d) List the hour number (for example 13 means 1pm-2pm) and number of trips which end at the station "B.U. Central"	2 hours

Having a good cognitive load management [discriminate and filter the available data] skills</p> <p>20. Having a good digital footprint</p>						
Module:1	Introduction To Exploratory Data Analysis					3hours
Module content: Data Analytics lifecycle, ExploratoryDataAnalysis(EDA)– Definition,Motivation,Stepsindataexploration, The basic data types Data Type Portability						
Module:2	Preprocessing-Traditional Methods And Maximum Likelihood Estimation					4 hours
Module content: Introduction to Missing data, Traditional methods for dealing with missing data, Maximum Likelihood Estimation – Basics, Missing data handling, Improving the accuracy of analysis						
Module:3	Preprocessing Bayesian Estimation					4 hours
Introduction to Bayesian Estimation ,Multiple Imputation-Imputation Phase, Analysis and Pooling Phase, Practical Issues in Multiple Imputation, Models for Missing Notation Random Data						
Module:4	Data Summarization & Visualization					4hours
Module content: Statistical data elaboration, 1-D Statistical data analysis, 2-D Statistical data Analysis, N-D Statistical data analysis						
Module:5	Outlier Analysis					3hours
Module content: Introduction, Extreme Value Analysis, Clustering based, Distance Based and Density Based outlier analysis, Outlier Detection in Categorical Data						

Module:6	Feature Subset Selection	4hours	
Module content: Feature selection algorithms: filter methods, wrapper methods and embedded methods, Forward selection backward elimination, Relief, greedy selection, genetic algorithms for features election			
Module:7	Dimensionality Reduction	6hours	
Module content: Introduction, Principal Component Analysis(PCA), Kernel PCA, Canonical Correlation Analysis, Factor Analysis, Multi dimensional scaling, Correspondence Analysis			
Module:8	Contemporary issues:	2hours	
Recent Trends			
		Total Lecture hours:	30hours
Text Book(s)			
1.	One or two books published after 2010 (preferably after 2015) to be given (please give complete bibliography) Authors, book title, year of publication, edition number, press, place

CSE6001	BIG DATA FRAMEWORKS	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1.To understand the need of Big Data, challenges and different analytical architectures 2.Installation and understanding of Hadoop Architecture and its ecosystems 3.Processing of Big Data with Advanced architectures like Spark. 4.Describe graphs and streaming data in Spark 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1.Discuss the challenges and their solutions in Big Data 2.Understand and work on Hadoop Framework and eco systems. 3. Explain and Analyse the Big Data using Map-reduce programming in Both Hadoop and Spark framework. 4. Demonstrate spark programming with different programming languages. 5.Demonstrate the graph algorithms and live streaming data in Spark 6. Lab: analyse and implement different frame work tools by taking sample data sets. 7.Project: illustrate and implement the concepts by taking an application problem. 						
Student Learning Outcomes (SLO):		5,8,20 (eg)				
<ol style="list-style-type: none"> 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data 17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 						
Module:1	Introduction To Big Data	3hours				
Data Storage and Analysis - Characteristics of Big Data – Big Data Analytics - Typical Analytical Architecture – Requirement for new analytical architecture – Challenges in Big Data Analytics – Need of big data frameworks						
Module:2	Hadoop Framework	6 hours				
Hadoop – Requirement of Hadoop Framework - Design principle of Hadoop –Comparison with other system - Hadoop Components – Hadoop 1 vs Hadoop 2 – Hadoop Daemon’s – HDFS Commands – Map Reduce Programming: I/O formats, Map side join, Reduce Side Join, Secondary sorting, Pipelining MapReduce jobs						
Module:3	Hadoop Ecosystem	3 hours				
Introduction to Hadoop ecosystem technologies: Serialization: AVRO, Co-ordination: Zookeeper, Databases: HBase, Hive, Scripting language: Pig, Streaming: Flink, Storm						
Module:4	Spark Framework	4 hours				
Introduction to GPU Computing, CUDA Programming Model, CUDA API, Simple Matrix, Multiplication in CUDA, CUDA Memory Model, Shared Memory Matrix Multiplication, Additional CUDA API Features.						

Module:5	Data Analysis with Spark Shell	4 hours
Writing Spark Application - Spark Programming in Scala, Python, R, Java - Application Execution.		
Module:6	Spark SQL and GraphX	5hours
SQL Context – Importing and Saving data – Data frames – using SQL – GraphX overview – Creating Graph – Graph Algorithms.		
Module:7	Spark Streaming	3 hours
Overview – Errors and Recovery – Streaming Source – Streaming live data with spark		
Module:8	Recent Trends in Big Data Analytics	1 hours
Total Lecture hours: 30 hours

CSE6005	MACHINE LEARNING				L	T	P	J	C
					2	0	2	4	4
Pre-requisite	NIL				Syllabus version				
					1.0				
Course Objectives:									
<ol style="list-style-type: none"> 1. Acquire theoretical Knowledge on setting hypothesis for pattern recognition 2. Apply suitable machine learning techniques for data handling and to gain knowledge from it 3. Evaluate the performance of algorithms and to provide solution for various real-world applications 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Recognize the characteristics of Machine Learning techniques that enable to solve real world problems 2. Recognize the characteristics of machine learning strategies 3. Apply various supervised learning methods to appropriate problems 4. Identify and integrate more than one techniques to enhance the performance of learning 5. Create probabilistic and unsupervised learning models for handling unknown pattern 6. Analyze the co-occurrence of data to find interesting frequent patterns 									
Student Learning Outcomes (SLO): 5,8,20 (eg)									
<ol style="list-style-type: none"> 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 9. Having problem solving ability -solving social issues and engineering problems 17. Having ability to use techniques, skills and modern engineering tools necessary for engineering practice 									
Module:1	INTRODUCTION TO MACHINE LEARNING				3hours				
Introduction, Examples of Various Learning Paradigms, Perspectives and Issues, Version Spaces, Finite and Infinite Hypothesis Spaces, PAC Learning, VC Dimension.									
Module:2	Supervised Learning				9 hours				
Decision Trees: ID3, Classification and Regression Trees, Regression: Linear Regression, Multiple Linear Regression, Logistic Regression, Neural Networks: Introduction, Perceptron, Multilayer Perceptron, Support vector machines: Linear and Non-Linear, Kernel Functions, K-Nearest Neighbours									
Module:3	Ensemble Learning				3 hours				
Model Combination Schemes, Voting, Error-Correcting Output Codes, Bagging: Random Forest Trees, Boosting: Adaboost, Stacking									
Module:4	Unsupervised Learning				5hours				
Introduction to clustering, Hierarchical: AGNES, DIANA, Partitional: K-means clustering, K-Mode Clustering, Expectation Maximization, Gaussian Mixture Models									
Module:5	Probabilistic Learning				3 hours				

Bayesian Learning, Bayes Optimal Classifier, Naive Bayes Classifier, Bayesian Belief Networks			
Module:6	Learning Association Rules	3hours	
Mining Frequent Patterns - basic concepts -Apriori algorithm, FP- Growth algorithm, Association-based Decision Trees			
Module:7	Machine Learning in Practice	2 hours	
Design, Analysis and Evaluation of Machine Learning Experiments, Other Issues: Handling imbalanced data sets			
Module:8	Recent Trends in Big Data Analytics	2 hours	
		Total Lecture hours:	30 hours
Text Book(s)			
Reference Books

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	Implement Decision Tree learning	2 hours	
2.	Implement Logistic Regression	2 hours	
3.	Implement classification using Multilayer perceptron	2 hours	
4.	Implement classification using SVM	2 hours	
5.	Implement Adaboost	2 hours	
6.	Implement Bagging using Random Forests	2 hours	
7.	Implement K-means Clustering to Find Natural Patterns in Data	2 hours	
8.	Implement Hierarchical clustering	2 hours	
9.	Implement K-mode clustering	2 hours	
10.	Implement Association Rule Mining using FP Growth	2 hours	
11.	Classification based on association rules	2 hours	
12.	Implement Gaussian Mixture Model Using the Expectation Maximization	2 hours	
13.	Evaluating ML algorithm with balanced and unbalanced datasets	2 hours	
14.	Comparison of Machine Learning algorithms	2 hours	
15.	Implement k-nearest neighbours algorithm	2 hours

CSE5002	OPERATING SYSTEMS AND VIRTUALIZATION	L	T	P	J	C
		2	0	2	0	3
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
1. To introduce Virtualization, operating systems fundamental concepts and its technologies. 2. To provides skills to write programs that interact with operating system components such as processes, thread, memory during concurrent execution. 3. To provide the skills and knowledge necessary to implement, provisioning and administer server and desktop virtualization.						
Expected Course Outcomes:						
Upon completion of the course, the students will be able to 1. Study operating system layers and kernel architectures. 2. Design various techniques for process management. 3. Construct various address translation mechanism. 4. Perform process threading and synchronization. 5. Study various methods of virtualization and perform desktop and server virtualization. 6. Classify the light-weight virtual machines with dockers and containers. 7. Develop programs related to the simulations of operating systems and virtualization concepts.						
Student Learning Outcomes (SLO): 5, 14, 17						
5. Having design thinking capability. 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data. 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice.						
Module:1	INTRODUCTION	2 hours				
History of OS - Computer system architecture a layered view with interfaces, Glenford Myer, Monolithic Linux Hybrid Windows 10 kernels Layered architecture of operating system and core functionalists.						
Module:2	PROCESS	5 hours				
Introduction, Process Operations, States, Context switching, Data Structures (Process Control Block (PCB), Process Scheduling: Multi-Level Feedback Queue, Multi-processor Scheduling, Deadlocks and its detection.						
Module:3	MEMORY	4 hours				
Introduction, Address Spaces, Memory API, Address Translation, Paging - Faster Translations (TLB), Smaller Tables. Virtual Memory System in x86.						
Module:4	CONCURRENCY	6 hours				
Introduction, Thread Models, Thread API, Building Evaluating a Lock, Test And Set, Classical problems handling using semaphore, Monitors, Persistence - File Organization: The i-node, Crash Consistency file security.						
Module:5	VIRTUAL MACHINES	2 hours				
Process and System VMs Taxonomy of VMs.						
Module:6	TYPES OF VIRTUALIZATION	4 hours				
Hardware Emulation, Full Virtualization with binary translation, Hardware assisted, Operating System Virtualization, OS assisted /Para virtualization.						
Module:7	HYPERVERSOR	5 hours				
Type 1, Type 2, Paravirtualization, Server Virtualization, Desktop Virtualization, Overview VM portability - Clones, Templates, Snapshots, OVF, Hot and Cold Cloning Protecting Increasing Availability, Light Weight Virtual machine: Container / Docker.						
Module:8	RECENT TRENDS	2 hours				
		Total Lecture hours:	30 hours			
Text Book(s)						

1.	Silberschatz, Abraham, Greg Gagne, and Peter B. Galvin, “ <i>Operating system concepts</i> ”, 10 th Edition, Wiley Publishers, 2018.		
2.	Matthew Portnoy, “ <i>Virtualization Essentials</i> ”, John Wiley Sons Inc; 2 nd Edition Edition, 2016.		
Reference Books

2.	William Stallings, “ <i>Operating Systems: Internals and Design Principles</i> ”, 8th Edition, 2014.		
3.	Smith, Nair, “ <i>Virtual Machines: Versatile Platforms for Systems and Processes</i> ”, 1 st Edition, Morgan Kaufmann Publishers, 2005.		
	Authors, book title, year of publication, edition number, press, place		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / LAB / Seminar			
List of Indicative Experiments			
1.	Study of Basic Linux Commands.		
2.	Shell Programming (I/O, Decision making, Looping, Multi-level branching).		
3.	Crating child process using fork() system call, Orphan and Zombie process creation.		
4.	Simulation of CPU scheduling algorithms (FCFS, SJF, Priority and Round Robin).		
5.	Simulation of Bankers algorithm to check weather given system is in safe state or not. Also check whether addition resource requested can be granted immediately.		
6.	Parallel Thread management using pthread library. Implement a data parallelism using multi-threading.		
7.	Dynamic memory allocation algorithms - first-fit, best-fit, worst-fit algorithms.		
8.	Page Replacement Algorithms FIFO, LRU and Optimal.		
9.	Virtualization Setup: Type-1, Type-2 Hypervisor.		
10.	Implementation of OS / Server Virtualization.

CSE6006	NOSQL	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. Explore the origins of NoSQL databases and the characteristics that distinguish them from traditional relational database management systems. 2. Understand the architectures and common features of the main types of NoSQL databases (key-value stores, document databases, column-family stores, graph databases) 3. Discuss the criteria that decision makers should consider when choosing between relational and non-relational databases and techniques for selecting the NoSQL database that best addresses specific use cases. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1.Explain the detailed architecture, Database properties and storage requirements 2.Differentiate and identify right database models for real time applications 3.Outline Keyvalue architecture and characteristics 4.Design Schema and implement CRUD operations, distributed data operations 5.Compare data ware housing schemas and implement various column store internals 6.Choose and implement Advanced columnar data model functions for the real time applications 7.Develop Application with Graph Data model 						
Student Learning Outcomes (SLO):		5,8,20 (eg)				
<ol style="list-style-type: none"> 5.Having design thinking capability 7.Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 12. Having adaptive thinking and adaptability 						
Module:1	INTRODUCTION TO NOSQL CONCEPTS	4hours				
Data base revolutions: First generation, second generation, third generation, Managing Transactions and Data Integrity, ACID and BASE for reliable database transactions, Speeding performance by strategic use of RAM, SSD, and disk, Achieving horizontal scalability with database sharding, Brewers CAP theorem.						
Module:2	NOSQL DATA ARCHITECTURE PATTERNS	4 hours				
NoSQL Data model: Aggregate Models- Document Data Model- Key-Value Data Model- Columnar Data Model, Graph Based Data Model Graph Data Model, NoSQL system ways to handle big data problems, Moving Queries to data, not data to the query, hash rings to distribute the data on clusters, replication to scale reads, Database distributed queries to data nodes.						
Module:3	KEY VALUE DATA STORES	5 hours				
From array to key value databases, Essential features of key value Databases, Properties of						

keys, Characteristics of Values, Key-Value Database Data Modeling Terms, Key-Value Architecture and implementation Terms, Designing Structured Values, Limitations of Key-Value Databases, Design Patterns for Key-Value Databases, Case Study: Key-Value Databases for Mobile Application Configuration			
Module:4	DOCUMENT ORIENTED DATABASE	4hours	
Document, Collection, Naming, CRUD operation, querying, indexing, Replication, Sharding, Consistency Implementation: Distributed consistency, Eventual Consistency, Capped Collection, Case studies: document oriented database: MongoDB and/or Cassandra			
Module:5	COLUMNAR DATA MODEL	4 hours	
Data warehousing schemas: Comparison of columnar and row-oriented storage, Column-store Architectures: C-Store and Vector-Wise, Column-store internals and, Inserts/updates/deletes, Indexing, Adaptive Indexing and Database Cracking.			
Module:6	COLUMNAR DATA MODEL	3hours	
Advanced techniques: Vectorized Processing, Compression, Write penalty, Operating Directly on Compressed Data Late Materialization Joins , Group-by, Aggregation and Arithmetic Operations, Case Studies			
Module:7	DATA MODELING WITH GRAPH	4 hours	
Comparison of Relational and Graph Modeling, Property Graph Model Graph Analytics: Link analysis algorithm- Web as a graph, Page Rank- Markov chain, page rank computation, Topic specific page rank (Page Ranking Computation techniques: iterative processing, Random walk distribution Querying Graphs: Introduction to Cypher, case study: Building a Graph Database Application- community detection			
Module:8	Contemporary issues	1 hours	
		Total Lecture hours:	30 hours
Reference Books			
	<ol style="list-style-type: none"> 1. An introduction to Information Retrieval, Christopher D.manning, Prabhakar Raghavan, Hinrich Schutze 2. TheDesignandImplementationofModernColumn-OrientedDatabaseSystems,Daniel Abadi YaleUniversity 3. Next Generation database: NoSQL and big data by GuyHarrison 		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	ImporttheHubwaydataintoNeo4jandconfigureNeo4j.Then, answer the following questions using the Cypher Query Language: <ol style="list-style-type: none"> a)List top 10 stations with most outbound trips (Show station name and number of trips) b) Listtop10stationswithmostinboundtrips(Show station name and number of trips) c) List top 5 routes with most trips (Show starting station name, ending station name and number of trips) (4) List the hour number(forexample13means1pm-2pm) and number of trips which start 		3 hours

	from the station "B.U. Central" d) List the hour number (for example 13 means 1pm-2pm) and number of trips which end at the station "B.U. Central"	
2.	Download a zip code dataset at http://media.mongodb.org/zips.json . Use mongo import to import the zip code dataset into MongoDB. After importing the data, answer the following questions by using aggregation pipelines: (1) Find all the states that have a city called "BOSTON". Find all the states and cities whose names include the string "BOST". Each city has several zip codes. Find the city in each state with the most number of zip codes and rank those cities along with the states using the city populations. MongoDB can query on spatial information.	3 hours
3.	Create a database that stores road cars. Cars have a manufacturer, a type. Each car has a maximum performance and a maximum torque value. Do the following: Test Cassandra's replication schema and consistency models.	3 hours
4.	Master Data Management using Neo4j Manage your master data more effectively The world of master data is changing. Data architects and application developers are swapping their relational databases with graph databases to store their master data. This switch enables them to use a data store optimized to discover new insights in existing data, provide a 360-degree view of master data and answer questions about data relationships in real time	3 hours
5.	Shopping Mall case study using cassandra, where we have many customers ordering items from themal land we have suppliers who deliver them their ordered items.	3 hours
Total Laboratory Hours		30 hours

CSE6014	Programming for Data Science	L	T	P	J	C
		0	0	4	0	2
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
1. To provide necessary knowledge on how to manipulate data objects, produce graphics, analyse data using common statistical methods and generate reproducible statistical reports with programming in Python and R						
Expected Course Outcome:						
1. Ability to solve the analytical problems using Python and R						
2. Develop competency in the Python programming language and a number of data-related Python libraries such as Pandas, Numpy, and Scipy						
3. Ability to communicate results of analysis effectively using visualizations in Python and R						
4. Import, export and manipulate data and produce statistical summaries of continuous and categorical data in Python and R						
5. Ability to perform exploratory data analysis using Python and R 17SLO						
Student Learning Outcomes (SLO):						
7.Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)						
14. Having an ability to design and conduct experiments, as well as to analyze and interpret data						
17.Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice						
Module:1	Expressions, Operators, matrices, Decision Statements in python	2 hours				
Module:2	Control Flow and Functions in python	2 hours				
Module:3	Classes, Objects, Packages and Files in python	2 hours				
Module:4	Tuple, Lists, Sequences, Dictionaries, Comprehensions	2 hours				
Module:5	Numpy Arrays objects, Creating Arrays, basic operations, Indexing, Slicing and iterating, copying arrays, shape manipulation, Identity array, eye function, Universal function	2 hours				
Module:6	Linear algebra with Numpy, eigen values and eigen vectors with Numpy	2 hours				
Module:7	Aggregation and Joining, Pandas Object: Concatenating and appending data frames, index objects	2 hours				
Module:8	Handling Time series data using pandas Handling missing values using pandas	2 hours				
Module:9	Reading and writing the data including JSON data	2 hours				

Module:10	Web scraping using python, Combining and merging	2 hours
Module:11	Datasets Data transformations Basic matplotlib plots, common plots used in statistical analysis in python	2 hours
Module:12	common plots used in statistical analysis in python Datatypes in R2. Sequence generation, Vector and subscript, Random2 number generation in R Data frames and R functions2 Data manipulation and Data Reshaping using plyr, dplyr,2 reshape2 Parametric statistics and Non-parametric statistics2 Continuous and Discrete Probability distribution using R2	2 hours
Module:13	Correlation and covariance, contingency tables2 Overview of Sampling, different sampling techniques2 R and data base connectivity2	2 hours
Module:12	Web application development with R using Shiny2 Approaches to dealing with missing data in R2 Exploratory data analysis with simple visualizations using R 2 Feature or Attribute selection using R2 Dimensionality Reduction with R2 Time series data analysis with R2	2 hours
Total Lecture hours:		30 hours

CSE6016	INFORMATION VISUALIZATION	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To understand the various types of data, apply and evaluate the principles of data visualization. 2. Acquire skills to apply visualization techniques to a problem and its associated dataset. 3. To apply structured approach to create effective visualizations. 4. To learn how to bring valuable insight from the massive dataset using visualization. 5. To learn how to build visualization dashboard to support decision making. 6. To create interactive visualization for better insight using various visualization tools. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Identify the data types and its associated visualization mechanisms. 2. Apply the various scalar and vector visualization techniques to create suitable visualization for real life applications. 3. Handle and analyse multidimensional data and hierarchical data for visualization. 4. Perform multivariate data analysis and visualization. 5. Apply the visualization guidelines for effective information visualization. 6. Demonstrate the concept of visualization through dashboard creation for various applications. 7. Choose appropriate methods for the given real world problems and produce meaningful visualization. 						
Student Learning Outcomes (SLO):						
<ol style="list-style-type: none"> 4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified) 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 						
Module:1	Introduction to Data Visualization	4hours				
Overview of data visualization - Data Abstraction - Task Abstraction - Analysis: Four Levels for Validation, Human Visual Perception						
Module:2	Visualization Techniques - i	3 hours				
Scalar and point techniques – vector visualization techniques – matrix visualization						
Module:3	Visualization Techniques - II	6 hours				
Visualization Techniques for Trees, Graphs, and Networks, Multidimensional data						
Module:4	Visual Analysis of data from various domains - I	5hours				
Time-oriented data visualization – Spatial data visualization and case studies

CSE6017	MINING MASSIVE DATA	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				
						1.0
Course Objectives:						
<ol style="list-style-type: none"> 1. To provide comprehensive knowledge on developing and applying machine learning algorithms for massive real-world datasets in distributed frameworks. 2. To demonstrate the use of big data analytics tools like Spark and Mahout for mining massive datasets. 3. To impart in depth knowledge on Deep Learning and Extreme Learning concepts. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Identify right machine learning / mining algorithm for handling massive data 2. Apply classification and regression models with Spark and Mahout 3. Implement clustering models using Spark and Mahout 4. Mine social Network graphs using MapReduce 5. Apply semi supervised learning for clustering and classification 6. Use deep learning to solve real-life problem 7. Use Extreme Learning Machine for classification and regression. 8. Use big data analytics tools such as Spark, Mahout and H2O in solving problems based on Machine learning 						
Student Learning Outcomes (SLO): 7,9,14						
<ol style="list-style-type: none"> 2. Having a clear understanding of the subject related concepts and of contemporary issues 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 9. Having problem solving ability- solving social issues and engineering problems 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice. 						
Module:1	MapReduce Based Machine Learning	7hours				
Module content: K-Means, PLANET, Parallel SVM, Association Rule Mining in MapReduce, Inverted Index, Page Ranking, Expectation Maximization, Bayesian Networks						
Module:2	Classification and Regression models with Spark and Mahout	5hours				
Module content: Linear support vector machines - Naive Bayes model- Decision Trees - Least square regression- Decision trees for regression.						
Module:3	Clustering in Spark and Mahout	4hours				
Module content: Hierarchical Clustering in a Euclidean and Non-Euclidean Space - The Algorithm of Bradley, Fayyad, and Reina - A variant of K-means algorithm - Processing Data in BFR Algorithm CURE algorithm - Clustering models with Spark - Spectral clustering using Mahout						
Module:4	Mining Social-Network Graphs	3hours				
Module content: Clustering of Social-Network Graphs - Direct Discovery of Communities - Partitioning of Graphs Finding Overlapping Communities - Counting Triangles using MapReduce Neighborhood Properties of Graphs						
Module:5	Semi-Supervised Learning	3hours				
Module content: Introduction to Semi-Supervised Learning, Semi-Supervised Clustering, Transductive Support Vector Machines						
Module:6	Deep Learning	4hours				
Module content: Introduction, Deep Neural Networks, Deep Belief Networks, Auto Encoders, Recurrent Networks						

Module:7	Extreme Learning	2hours	
Module content: Extreme Learning Machines (ELM), ELM auto encoder, Extreme Support Vector Regression			
Module:8	Recent Trends:	2hours

					1.0				
Course Objectives:									
1. It introduces theoretical foundations, algorithms, methodologies, and Applications of streaming data and also provide practical knowledge for handling and analyzing streaming data.									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Recognize the characteristics of data streams that make it useful to solve real-world problems. 2. Identify and apply appropriate algorithms for analyzing the data streams for variety of problems. 3. Implement different algorithms for analyzing the data streams 4. Identify the metrics and procedures to evaluate a model 									
Student Learning Outcomes (SLO):									
7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)									
14. Having an ability to design and conduct experiments, as well as to analyze and interpret data									
17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice									
Module:1	Introduction				2 hours				
characteristics of the data streams, Challenges in mining data streams Requirements and principles for real time processing, Concept drift Incremental learning.									
Module:2	Data Streams				5 hours				
Basic Streaming Methods, Counting the Number of Occurrence of the Elements in a Stream, Counting the Number of Distinct Values in a Stream, Bounds of Random Variables, Poisson Processes, Maintaining Simple Statistics from Data Streams, Sliding Windows, Data Synopsis, Change Detection: Tracking Drifting Concepts, Monitoring the Learning Process									
Module:3	Decision Trees				4 hours				
The Very Fast Decision Tree Algorithm (VFDT), The Base Algorithm, Analysis of the VFDT Algorithm, Extensions to the Basic Algorithm: Processing Continuous Attributes, Functional Tree Leaves, Concept Drift.									
Module:4	Clustering from Data Streams				5 hours				
Clustering Examples: Basic Concepts, Partitioning Clustering - The Leader Algorithm, Single Pass k-Means, Micro Clustering, Clustering Variables: A Hierarchical Approach									
Module:5	Frequent Pattern Mining				4 hours				
Mining Frequent Itemsets from Data Streams- Landmark Windows, Mining Recent Frequent Itemsets, Frequent Itemsets at Multiple Time Granularities									
Sequence Pattern Mining- Reservoir Sampling for Sequential Pattern Mining over data streams									

Module:6	Evaluating Streaming Algorithms	4 hours	
Evaluation Issues, Design of Evaluation Experiments, Evaluation Metrics, Error Estimators using a Single Algorithm and a Single Dataset, Comparative Assessment, The 0-1 loss function, Evaluation Methodology in Non-Stationary Environments, The Page-Hinkley Algorithm.			
Module:7	Complex Event Processing	4 hours	
Introduction to Complex Event Processing, Features of CEP, Need for CEP, CEP Architectural Layers, Scaling CEP, Events, Timing and Causality, Event Patterns, Rules and Constraint, STRAW-EPL, Complex Events and Event Hierarchies			
Module:8	RECENT TRENDS	2 hours	
Total Lecture hours: 30 hours			
Text Book(s)			
1.			
Reference Books			
	1. Joao Gama, "Knowledge Discovery from Data Streams", CRC Press, 2010. 2. David Luckham, "The Power of Events: An Introduction to Complex Event Processing in Distributed Enterprise Systems", Addison Wesley, 2002. 3. Charu C. Aggarwal, "Data Streams: Models And Algorithms", Kluwer Academic Publishers, 2007		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
	1. Exploring one stream processing engine like storm or STREAM etc (2 classes) 2. Implementation of algorithms for example : VFDT, CVFDT(2 classes) 3. Implementation of Clustering 4. Implementation of Frequent pattern mining 5. Exploring one CEP engine like ESPER or DROOLS(2 classes) 6. Exercise with continuous queries Logical operations on single stream 7. Exercise with continuous queries Logical operations on multiple streams 8. Exercise with continuous queries temporal operators on single stream 9. Exercise with continuous queries temporal operators on multiple streams Exercise with complex continuous queries with logical, relational & temporal operators on multiple streams		
Total Laboratory Hours			30 hours
Mode of assessment:			
Recommended by Board of Studies	13.05.2016		
Approved by Academic Council	No. 41	Date	17.06.2016

CSE6019	Text, Web and Social Media Analytics	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To provide an overview of common text mining and social media data analytic activities. 2. To understand the complexities of processing text and network data from different datasources. 3. To enable students to solve complex real-world problems for sentiment analysis and Recommendation systems. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Interpret the terminologies, metaphors and perspectives of social media analytics. 2. Apply a wide range of classification, clustering, estimation and prediction algorithms on Textual data. 3. Perform social network analysis to identify important social actors, subgroups and network properties in social media sites. 4. Apply state of the art web mining tools and libraries on realistic data sets as a basis for business decisions and applications. 5. Provide solutions to the emerging problems with social media such as behaviour analytics and Recommendation systems. 6. Design new solutions to opinion extraction, sentiment classification and data summarization problems. 						
Student Learning Outcomes (SLO):		7,9,17				
<ol style="list-style-type: none"> 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 9. Having problem solving ability- solving social issues and engineering problems 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 						
Module:1	Introduction to Text Mining	6 hours				
Text Representation- tokenization , stemming, stop words, TF-IDF, Feature Vector Representation, NER,N-gram modeling.						
Module:2	Mining Textual Data	6 hours				
Text Clustering, Text Classification, Topic Modeling-LDA,HDP						
Module:3	Introduction to Web-Mining	6 hours				
InvertedindicesandBooleanqueries.PLSI,Queryoptimization,pageranking.						
Module:4	Web Usage Web content Mining	7 hours				
EssentialsofSocialgraphs,SocialNetworks,Models,InformationDiffusioninSocialMedia.						
Module:5	Introduction to Social Media Network	6 hours				
EssentialsofSocialgraphs,SocialNetworks,Models,InformationDiffusioninSocialMedia.						
Module:6	Mining Social Media	6 hours				
BehavioralAnalytics,InfluenceandHomophily,RecommendationinSocialMedia						
Module:7	Sentimental Mining	6 Hours				
Sentiment Classification ,feature based opinion mining, comparative sentence and relational mining, Opinion spam.						
Module:8	Recent Threads	2 hours				
Recent Trends in Text, Web and Social Media Analytics						
		Total Lecture hours:	45hours

CSE6020	BIG DATA TECHNOLOGIES				L	T	P	J	C
		2	0	2	4	4			
Pre-requisite	NIL	Syllabus version							
		1.0							
Course Objectives:									
<ol style="list-style-type: none"> 1. To have knowledge on accessing, storing and manipulating the huge data from different resources. 2. To understand the working environment of Pig and Hive for processing the structured and unstructured data. 3. To differentiate the RDBMS and Hive architectures and implement queries to process the data using sqoop. 4. To have a knowledge on searching mechanisms using solr. 									
Expected Course Outcome:									
<ol style="list-style-type: none"> 1. Illustrate the usage of data on different Big data ecosystems. 2. Demonstrate the Pig architecture and evaluation of pig scripts. 3. Describe the Hive architecture and execute SQL queries on sample data sets. 4. Understand the process of transferring data between different file systems and to execute operations using sqoop. 5. Understand the concepts of indexing and use these concepts in solr search engine. 6. Implement and evaluate the data manipulation procedures using pig, hive, sqoop and solr. 7. Develop an application using different eco system tools by taking standard sample data set. 									
Student Learning Outcomes (SLO):									
<ol style="list-style-type: none"> 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 14. Having an ability to design and conduct experiments, as well as to analyze and interpret data 17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice 									
Module:1	Introduction				3hours				
Big data- Concepts, Needs and Challenges of big data. Types and source of big data. Components of Hadoop Eco System- Data Access and storage, Data Intelligence, Data Integration, Data Serialization, Monitoring, Indexing.									
Module:2	Apache Pig				6 hours				
Introduction, Parallel processing using Pig, Pig Architecture, Grunt, Pig Data Model-scalar and complex types. Pig Latin- Input and output, Relational operators, User defined functions. Working with scripts.									
Module:3	Apache Hive Fundamentals				3 hours				
Introduction-Hive modules, Data types and file formats, Hive QL-Data Definition and Data Manipulation.									
Module:4	Apache Hive Advanced Concepts				4hour				

Hive QL queries, Hive QL views- reduce query complexity. Hive scripts. Hive QL Indexes-create, show, drop. Aggregate functions. Bucketing vs Partitioning.			
Module:5	Importing and Handling Relational Data in Hadoop using Sqoop	3 hours	
Relational database management in Hadoop: Bi directional data transfer between Hadoop and external database. Import data- Transfer an entire table, import subset data, use different file format. Incremental import import new data, incrementally import data, preserving the value			
Module:6	Sqoop	4hours	
Export transfer data from Hadoop, update the data, update at the same time, export subset of columns. Hadoop ecosystem integration- import data to hive, using partitioned hive tables, replace special delimiters.			
Module:7	Solr	4 hours	
Introduction. Information retrieval search engine, categories of data, inverted index. Design- field attributes and types. Indexing- indexing tool. Indexing operations using csv documents. Searching data- parameters, default query.			
Module:8	Recent Trends in Big data	2 hours	
		Total Lecture hours:	30 hours
Reference Books

CSE6021	Domain Specific Predictive Analytics	L	T	P	J	C
		3	0	0	4	4
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
1. It introduces theoretical foundations, algorithms, methodologies for analysing data in various domains such Retail, Finance, Risk and Healthcare.						
Expected Course Outcome:						
1. Recognize challenges in dealing with data sets in domains such as finance, risk and healthcare.						
2. Identify real-world applications of machine learning in domains such as finance, risk and healthcare.						
3. Identify and apply appropriate algorithms for analyzing the data for variety of problems in finance, risk and healthcare.						
4. Make choices for a model for new machine learning tasks based on reasoned argument						
Student Learning Outcomes (SLO):						
2. Having a clear understanding of the subject related concepts and of contemporary issues						
4. Having Sense-Making Skills of creating unique insights in what is being seen or observed (Higher level thinking skills which cannot be codified)						
9. Having problem solving ability- solving social issues and engineering problems						
14. Having an ability to design and conduct experiments, as well as to analyze and interpret data						
Module:1	Retail Analytics	7 hours				
Understanding Customer: Profiling and Segmentation, Modelling Churn. Modelling Lifetime Value, Modelling Risk, Market Basket Analysis.						
Module:2	Risk Analytics	5 hours				
Risk Management and Operational Hedging: An Overview, Supply Chain Risk Management, A Bayesian Framework for Supply Chain Risk Management, Credit Scoring and Bankruptcy Prediction						
Module:3	Financial Data Analytics	5 hours				
Financial News analytics: Framework, techniques, and metrics, News events impact market sentiment, Relating news analytics to stock returns						
Module:4	Financial Time Series Analytics	6 hours				
Financial Time Series and Their Characteristics, Common Financial Time Series models, Autoregressive models, Markov chain models, Time series models with leading indicators, Long term forecasting						
Module:5	Introduction Healthcare Analytics	6 hours				
An Introduction to Healthcare Data Analytics, Electronic Health Records, Privacy-Preserving Data Publishing Methods in Healthcare, Clinical Decision Support Systems						
Module:6	Healthcare Data Analytics	7 hours				
Natural Language Processing and Data Mining for Clinical Text: Core NLP Components,						

Information Extraction and Named Entity Recognition, Social Media Analytics for Healthcare: Tracking of Infectious Disease Outbreaks, Readmission risk Prediction			
Module:7	Genomic Data Analytics	7 hours	
Microarray Data, Microarray Data Analysis, Genomic Data Analysis for Personalized Medicine, Patient Survival Prediction from Gene Expression Data, Genome Sequence Analysis			
Module:8	RECENT TRENDS	2 hours	
		Total Lecture hours:	45 hours

		2	0	2	4	4
Pre-requisite	NIL	Syllabus version				
		1.0				
Course Objectives:						
<p>The objective of this course is to introduce methods for handling imprecise and uncertain data using Rough sets, Neuro Fuzzy Systems and foster their abilities in designing and implementing optimal solutions for real-world and engineering problems using derivative free optimization techniques.</p>						
Expected Course Outcome:						
<p>After successfully completing the course the student should be able to</p> <ul style="list-style-type: none"> • Have a general understanding of soft computing methodologies, to deal with imprecise and uncertain data • Develop computational neural network models for some simple biological systems; • Develop fuzzy models for engineering systems, particularly for control systems; • Apply derivative free optimization methods to solve real world problems <p>Demonstrate some applications of computational intelligence</p>						
Student Learning Outcomes (SLO):						
<p>7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning)</p> <p>14. Having an ability to design and conduct experiments, as well as to analyze and interpret data</p> <p>17. Having an ability to use techniques, skills and modern engineering tools necessary for engineering practice</p>						
Module:1	Introduction to Soft Computing	3 hours				
Soft Computing Overview – Uncertainty in data, Hard vs Soft Computing						
Module:2	Neural Networks	6 hours				
Introduction, RBF Networks, Self-Organizing Map, Boltzmann Machines, Convolutional Neural Networks						
Module:3	Fuzzy Systems	3 hours				
Fuzzy Sets, Fuzzy Relations, and Membership functions, Properties of Membership functions, Fuzzification and Defuzzification.						
Module:4	Fuzzy logic	4 hour				
Fuzzy Rule based systems, Fuzzy Decision making, Fuzzy Classification, Fuzzy C-Means Clustering.						
Module:5	Rough Sets	3 hours				
Rough Sets – Definition, Upper and Lower Approximations, Boundary Region, Decision Tables and Decision Algorithms. Properties of Rough Sets. Rough K-means clustering, Rough						

Module:6	Optimization Techniques	4hours
Introduction, Genetic Algorithm, Memetic Algorithms, Particle Swarm Optimization, Ant Colony Optimization, Frog-Leaping.		
Module:7	Hybrid Systems:	4 hours
GA Based Back Propagation Networks, Fuzzy Back Propagation Networks, Evolutionary Ensembles		
Module:8	Recent Trends	2 hours
Total Lecture hours:		30 hours

CSE6023	Cloud Computing Fundamentals	L	T	P	J	C
		2	0	2	4	4
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To provide students with the fundamentals and essentials of Cloud Computing. 2. To provide students a sound foundation of the Cloud Computing so that they are able to start using and adopting Cloud Computing services and tools in their real life scenarios. 3. To enable students exploring some important cloud computing driven commercial systems such as Google Apps, Microsoft Azure and Amazon Web Services and other businesses cloud applications. 4. To impart knowledge in applications of cloud computing 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Design, Develop & Demonstrate real-world applications from the Cloud Computing 2. Understand the subtle architectural difference in Public and Private Clouds. 3. Appreciate the requirements of various service paradigms in Cloud Computing. 4. Describe the methods of processing multimedia elements and other information presentation concepts during multimedia communications. 						
Student Learning Outcomes (SLO):						
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications 5. Having design thinking capability 18. Having critical thinking and innovative skills 						
Module:1	Introduction to Cloud Computing	4hours				
Cloud Computing Overview: Characteristics – challenges, benefits, limitations, Evolution of Cloud Computing, Cloud computing architecture, Cloud Reference Model (NIST Architecture)						
Module:2	Infrastructure as a Service	4 hours				
Service Model, Characteristics, Benefits, Enabling Technologies Case Study : AWS, OpenStack						
Module:3	Platform as a Service	4hours				
Service Model, Characteristics, Benefits, Enabling Technologies Case Studies : IBM Bluemix, GAE, Microsoft Azure						
Module:4	Software as a Service	4hours				
Service Model, Characteristics, Benefits, Enabling Technologies Case Study : Salesforce.com, CRM, Online Collaboration Services						
Module:5	Data Analytics as a Service	3hours				
Hadoop as a service, MapReduce on Cloud, Chubby locking Service						
Module:6	Introduction to Public and Private Clouds	5hours				
Shared Resources – Resource Pool – Usage and Administration Portal – Usage Monitor – Resource Management– Cloud Security – Workload Distribution – Dynamic provisioning.						
Module:7	Storage as a service	3hours				

Historical Perspective, Datacenter Components, Design Considerations, Power Calculations, Evolution of Data Centers, Cloud data storage - CloudTM			
Module:8	Contemporary issues:	2hours

		3	0	0	4	4
Pre-requisite	Nil	Syllabus version				
		1.0				
Course Objectives:						
1. To introduce the technology that enables IoT, application of IoT, cloud support for IoT and access data using mobile computing devices. This will serve as foundation for the cyber physical systems, Internet of services leading to Industry 4.0 changes.						
Expected Course Outcome:						
1. Identify the technologies that enables IoT.						
2. Able to use Hardware and software required to design and build IoT						
3. Develop programs for interfacing with sensors and actuators and other IoT devices Set up the servers to upload IoT data to cloud for further analysis						
Student Learning Outcomes (SLO): 1,5,18						
1.Having an ability to apply mathematics and science in engineering applications						
5. Having design thinking capability						
18.Having critical thinking and innovative skills						
Module:1	Introduction to IoT	6hours				
Module content Algorithm design techniques: Divide and Conquer, Brute force, Greedy, Dynamic Programming. Time complexity (asymptotic notation, recurrence relations)						
Module:2	IOT Hardware platforms	9 hours				
Overview of IoT supported Hardware Platforms: Raspberry pi, Arduino, Intel Galileo						
Module:3	Communication in IOT	5hours				
Interface protocol, Serial, SPI, I2C, 6LoWPAN, 802.11wifi, 802.15 Bluetooth, 802.15.4 Zigbee, RTLS, GPS, CoAp – Constrained application protocol, RPL – routing protocol for lossy networks.						
Module:4	IOT Software development	7hours				
Linux, Networking configurations in Linux, Accessing Hardware & Device Files interactions, Python packages: JSON, XML, HTTPLib, URLLib, SMTPLib, XMPP, Contiki OS						
Module:5	IoT Physical Servers & Cloud Offerings	6hours				
Introduction to Cloud Storage Models & Communication APIs, Cloud of things, Xively Cloud for IOT, PHP & MySQL for data processing, WAMP, Designing a RESTful Web API, MQTT, Amazon Web Services for IoT						
Module:6	Data Analytics for IoT	5hours				
Configuring and using Apache Storm for Real-time Data Analysis						
Module:7	Case Studies illustrating IoT Design	5hours				
Smart Home, Smart Parking, weather reporting and monitoring						
Module:8	Contemporary issues:	2hours

MAT6001	ADVANCED STATISTICAL METHODS	L	T	P	J	C
		2	0	2	0	3
Pre-requisite	Nil	Syllabus version				
		2.0				
Course Objectives:						
<ol style="list-style-type: none"> 1.To provide students with a framework that will help them choose the appropriate descriptive statistics in various data analysis situations. 2.To analyze distributions and relationships of real-time data. 3.To apply estimation and testing methods to make inference and modeling techniques for decision making using various techniques including multivariate analysis. 						
Expected Course Outcome:						
<ol style="list-style-type: none"> 1. Understand the value of statistics as a discipline and its relevance for Engineering 2. Analyze data using appropriate graphical methods and numerical summaries 3. Interpret and communicate the outcomes of estimation and hypothesis tests in the context of a problem 4. Perform large sample test and small sample testing of Hypothesis as well as calculate confidence interval for a population parameter for real time data. 5. describe and verify mathematical considerations for analyzing time series, including concepts of white noise, stationary, auto covariance, autocorrelation ; apply various techniques of time series models, including the regression with ARMA models 						
Student Learning Outcomes (SLO):		1,2,7,9				
<ol style="list-style-type: none"> 1. Having an ability to apply mathematics and science in engineering applications 2. Having a clear understanding of the subject related concepts and of contemporary issues 7. Having computational thinking (Ability to translate vast data in to abstract concepts and to understand database reasoning) 9. Having problem solving ability- solving social issues and engineering problems 						
Module:1	Basic Statistical Tools for Analysis:	4hours				
Summary Statistics, Correlation and Regression, Concept of R^2 and Adjusted R^2 and and Partial and Multiple Correlation, Fitting of simple and Multiple Linear regression, Explanation and Assumptions of Regression Diagnostics						
Module:2	Statistical inference :	9 hours				
Basic Concepts, Normal distribution-Area properties, Steps in tests of significance –large sample tests-Z tests for Means and Proportions, Small sample tests –t-test for Means, F test for Equality of Variances, Chi-square test for independence of Attributes.						
Module:3	Modelling and Forecasting Methods:	9hours				
Introduction: Concept of Linear and Non Liner Forecasting model ,Concepts of Trend, Exponential Smoothing, Linear and Compound Growth model, Fitting of Logistic curve and their Applications, Moving Averages, Forecasting accuracy tests.						
Probability models for time series: Concepts of AR, ARMA and ARIMA models.						
Module:4	Design of Experiments:	6hours				
Analysis of variance – one and two way classifications – Principle of design of experiments, CRD – RBD – LSD, Concepts of 2^2 and 2^3 factorial experiments						

Module:5	Contemporary issues:	2hours

Mode of Evaluation: Digital Assignments, Quiz, Continuous Assessments, Final Assessment Test			
List of Challenging Experiments (Indicative)			
1.	Computing Summary Statistics using real time data		
2	lotting and visualizing data using Tabulation and Graphical Representations.		
3	Applying simple linear and multiple linear regression models to real dataset; computing and interpreting the coefficient of determination for scale data.		
4.	Testing of hypothesis for Large sample tests for real-time problems.		
5.	Testing of hypothesis for Small sample tests for One and Two Sample mean and paired comparison (Pre-test and Post-test)		
6.	Testing of hypothesis for Small Sample tests for F-test		
7	Testing of hypothesis for Small Sample tests for Chi-square test		
8	Applying Time series analysis-Trends. Growth ,Logistic, Exponential models		
9	Applying Time series model AR , ARMA and ARIMA and testing Forecasting accuracy tests.		
10	Performing ANOVA (one-way and two-way), CRD, RBD and LSD for real dataset.		
11	Performing 2^2 factorial experiments with real time Applications		
12	Performing 2^3 factorial experiments with real time Applications		
Total Laboratory 24 Hours			
Mode of assessment:			
Recommended by Board of Studies		11.08.2017

SET5001	SCIENCE, ENGINEERING AND TECHNOLOGY PROJECT– I	L	T	P	J	C
						2
Pre-requisite		Syllabus Version				
Anti-requisite		1.0				
Course Objectives:						
<ul style="list-style-type: none"> ▪ To provide opportunity to involve in research related to science / engineering ▪ To inculcate research culture ▪ To enhance the rational and innovative thinking capabilities 						
Expected Course Outcome:						
<p>On completion of this course, the student should be able to:</p> <ol style="list-style-type: none"> 1. Identify problems that have relevance to societal / industrial needs 2. Exhibit independent thinking and analysis skills 3. Demonstrate the application of relevant science / engineering principles 						
SLO : 14, 18 & 20						
Modalities / Requirements						
<ol style="list-style-type: none"> 1. Individual or group projects can be taken up 2. Involve in literature survey in the chosen field 3. Use Science/Engineering principles to solve identified issues 4. Adopt relevant and well-defined / innovative methodologies to fulfill the specified objective 5. Submission of scientific report in a specified format (after plagiarism check) 						
Student Assessment : Periodical reviews, oral/poster presentation						
Recommended by Board of Studies		17-08-2017				
Approved by Academic Council		No. 47	Date	05-10-2017

ENG5001	Fundamentals of Communication Skills	L	T	P	J	C
		0	0	2	0	1
Pre-requisite	Not cleared EPT (English Proficiency Test)	Syllabus version				
		1.0				
Course Objectives:						
1. To enable learners learn basic communication skills - Listening, Speaking, Reading and Writing						
2. To help learners apply effective communication in social and academic context						
3. To make students comprehend complex English language through listening and reading						
Expected Course Outcome:						
1. Enhance the listening and comprehension skills of the learners						
2. Acquire speaking skills to express their thoughts freely and fluently						
3. Learn strategies for effective reading						
4. Write grammatically correct sentences in general and academic writing						
5. Develop technical writing skills like writing instructions, transcoding etc.,						
Student Learning Outcomes (SLO):						
18. Having critical thinking and innovative skills						
20. Having a good digital footprint						
Module:1	Listening	8 hours				
Understanding Conversation						
Listening to Speeches						
Listening for Specific Information						
Module:2	Speaking	4 hours				
Exchanging Information						
Describing Activities, Events and Quantity						
Module:3	Reading	6 hours				
Identifying Information						
Inferring Meaning						
Interpreting text						
Module:4	Writing: Sentence	8hours				
Basic Sentence Structure						
Connectives						
Transformation of Sentences						
Synthesis of Sentences						
Module:5	Writing: Discourse	4hours				
Instructions						
Paragraph						
Transcoding						
					Total Lecture hours:	30 hours
Text Book(s)

	Authors, book title, year of publication, edition number, press, place		
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar			
List of Challenging Experiments (Indicative)			
1.	familiarizing students to adjectives through brainstorming adjectives with all letters of the English alphabet and asking them to add an adjective that starts with the first letter of their name as a prefix.	2 hours	
2.	making students identify their peer who lack Pace, Clarity and Volume during presentation and respond using Symbols.	4 hours	
3.	using Picture as a tool to enhance learners speaking and writing skills	2 hours	
4.	using Music and Songs as tools to enhance pronunciation in the target language / Activities through VIT Community Radio	2 hours	
5.	Making students upload their Self- introduction videos in Vimeo.com	4 hours	
6.	Brainstorming idiomatic expressions and making them use those in to their writings and day to day conversation	4 hours	
7.	Making students Narrate events by adding more descriptive adjectives and add flavor to their language / Activities through VIT Community Radio	4 hours	
8	Identifying the root cause of stage fear in learners and providing remedies to make their presentation better	4 hours	
9	Identifying common Spelling & Sentence errors in Letter Writing and other day to day conversations	2 hours	
10.	discussing FAQ's in interviews with answers so that the learner gets a better insight in to interviews / Activities through VIT Community Radio	2 hours	
Total Laboratory Hours			32 hours
Mode of evaluation: Online Quizzes, Presentation, Role play, Group Discussions, Assignments, Mini Project			
Recommended by Board of Studies		22-07-2017

ENG5002	Professional and Communication Skills	L	T	P	J	C
		0	0	2	0	1
Pre-requisite	ENG5001	Syllabus version				
		1.1				
Course Objectives:						
1. To enable students to develop effective Language and Communication Skills						
2. To enhance students' Personal and Professional skills						
3. To equip the students to create an active digital footprint						
Expected Course Outcome:						
1. Improve inter-personal communication skills						
2. Develop problem solving and negotiation skills						
3. Learn the styles and mechanics of writing research reports						
4. Cultivate better public speaking and presentation skills						
5. Apply the acquired skills and excel in a professional environment						
Student Learning Outcomes (SLO):						
18. Critical thinking and innovative skills.						
20. Having a good digital footprint						
Module:1	Personal Interaction	2hours				
Introducing Oneself- one's career goals Activity: SWOT Analysis						
Module:2	Interpersonal Interaction	2 hours				
Interpersonal Communication with the team leader and colleagues at the workplace Activity: Role Plays/Mime/Skit						
Module:3	Social Interaction	2 hours				
Use of Social Media, Social Networking, gender challenges Activity: Creating LinkedIn profile, blogs						
Module:4	Résumé Writing	4 hours				
Identifying job requirement and key skills Activity: Prepare an Electronic Résumé						
Module:5	Interview Skills	4 hours				
Placement/Job Interview, Group Discussions Activity: Mock Interview and mock group discussion						
Module:6	Report Writing	4 hours				
Language and Mechanics of Writing Activity: Writing a Report						
Module:7	Study Skills: Note making	2hours				
Summarizing the report Activity: Abstract, Executive Summary, Synopsis						
Module:8	Interpreting skills	2 hours				
Interpret data in tables and graphs Activity: Transcoding						
Module:9	Presentation Skills	4 hours				
Oral Presentation using Digital Tools Activity: Oral presentation on the given topic using appropriate non-verbal cues						
Module:10	Problem Solving Skills	4 hours				
Problem Solving & Conflict Resolution Activity: Case Analysis of a Challenging Scenario						
	Total Lecture hours:	30hours

Course Objectives:						
The course gives students the necessary background to: <ol style="list-style-type: none"> 1. enable students to read and communicate in German in their day to day life 2. become industry-ready 3. make them understand the usage of grammar in the German Language. 						
Expected Course Outcome:						
The students will be able to <ol style="list-style-type: none"> 6. create the basics of German language in their day to day life. 7. understand the conjugation of different forms of regular/irregular verbs. 8. understand the rule to identify the gender of the Nouns and apply articles appropriately. 9. apply the German language skill in writing corresponding letters, E-Mails etc. 10. create the talent of translating passages from English-German and vice versa and To frame simple dialogues based on given situations. 						
Student Learning Outcomes (SLO):						
9. Having problem solving ability- solving social issues and engineering problems						
10. Having a clear understanding of professional and ethical responsibility						
Module:1		3 hours				
Einleitung, Begrüßungsformen, Landeskunde, Alphabet, Personalpronomen, Verb Konjugation, Zahlen (1-100), W-fragen, Aussagesätze, Nomen – Singular und Plural						
Lernziel: Elementares Verständnis von Deutsch, Genus- Artikelwörter						
Module:2		3 hours				
Konjugation der Verben (regelmässig /unregelmässig) die Monate, die Wochentage, Hobbys, Berufe, Jahreszeiten, Artikel, Zahlen (Hundert bis eine Million), Ja-/Nein- Frage, Imperativ mit Sie						
Lernziel : Sätze schreiben, über Hobbys erzählen, über Berufe sprechen usw.						
Module:3		4 hours				
Possessivpronomen, Negation, Kasus- AkkusativundDativ (bestimmter, unbestimmterArtikel), trennbare verben, Modalverben, Adjektive, Uhrzeit, Präpositionen, Mahlzeiten, Lebensmittel, Getränke						
Lernziel : Sätze mit Modalverben, Verwendung von Artikel, über Länder und Sprachen sprechen, über eine Wohnung beschreiben.						
Module:4		6 hours				
Übersetzungen : (Deutsch – Englisch / Englisch – Deutsch)						
Lernziel : Grammatik – Wortschatz - Übung						
Module:5		5 hours				
Leseverständnis, Mindmap machen, Korrespondenz- Briefe, Postkarten, E-Mail						
Lernziel :						

Wortschatzbildung und aktiver Sprachgebrauch			
Module:6	.		3 hours
Aufsätze : Meine Universität, Das Essen, mein Freund oder meine Freundin, meine Familie, ein Fest in Deutschland usw			
Module:7			4 hours
Dialoge: e) Gespräche mit Familienmitgliedern, Am Bahnhof, f) Gespräche beim Einkaufen ; in einem Supermarkt ; in einer Buchhandlung ; g) in einem Hotel - an der Rezeption ;ein Termin beim Arzt. Treffen im Cafe			
Module:8			2 hours
Guest Lectures/Native Speakers / Feinheiten der deutschen Sprache, Basisinformation über die deutschsprachigen Länder

		2.0				
Course Objectives:						
<ol style="list-style-type: none"> 1. To develop the students' logical thinking skills 2. To learn the strategies of solving quantitative ability problems 3. To enrich the verbal ability of the students 4. To enhance critical thinking and innovative skills 						
Expected Course Outcome:						
<ul style="list-style-type: none"> • Enabling students to use relevant aptitude and appropriate language to express themselves • To communicate the message to the target audience clearly 						
Student Learning Outcomes (SLO): 7, 9						
7. Having Computational thinking (Ability to translate vast data into abstract concepts and to understand database reasoning)						
9. Having problem solving ability- solving social issues and engineering problems						
Module:1	Business Etiquette: Social and Cultural Etiquette and Writing Company Blogs and Internal Communications and Planning and Writing press release and meeting notes	9 hours				
Value, Manners, Customs, Language, Tradition, Building a blog, Developing brand message, FAQs', Assessing Competition, Open and objective Communication, Two way dialogue, Understanding the audience, Identifying, Gathering Information,. Analysis, Determining, Selecting plan, Progress check, Types of planning, Write a short, catchy headline, Get to the Point –summarize your subject in the first paragraph., Body – Make it relevant to your audience,						
Module:2	Study skills – Time management skills	3 hours				
Prioritization, Procrastination, Scheduling, Multitasking, Monitoring, Working under pressure and adhering to deadlines						
Module:3	Presentation skills – Preparing presentation and Organizing materials and Maintaining and preparing visual aids and Dealing with questions	7 hours				
10 Tips to prepare PowerPoint presentation, Outlining the content, Passing the Elevator Test, Blue sky thinking, Introduction , body and conclusion, Use of Font, Use of Color, Strategic presentation, Importance and types of visual aids, Animation to captivate your audience, Design of posters, Setting out the ground rules, Dealing with interruptions, Staying in control of the questions, Handling difficult questions						
Module:4	Quantitative Ability -L1 – Number properties and Averages and Progressions and Percentages and Ratios	11 hours				
Number of factors, Factorials, Remainder Theorem, Unit digit position, Tens digit position, Averages, Weighted Average, Arithmetic Progression, Geometric Progression, Harmonic Progression, Increase & Decrease or successive increase, Types of ratios and proportions						

Module:5	Reasoning Ability-L1 – Analytical Reasoning	8 hours		
Data Arrangement(Linear and circular & Cross Variable Relationship), Blood Relations, Ordering/ranking/grouping, Puzzle test, Selection Decision table				
Module:6	Verbal Ability-L1 – Vocabulary Building	7 hours		
Synonyms & Antonyms, One word substitutes, Word Pairs, Spellings, Idioms, Sentence completion, Analogies				
Total Lecture hours: 45 hours
